

# Package ‘nhlscraper’

June 11, 2025

**Title** Scraper for National Hockey League Data

**Version** 0.1.1

**Description** Scrapes data from the 'NHL' API into 'tibble's. It primarily wraps endpoints documented by Zach Maludzin-ski (2023) <<https://github.com/Zmaluski/NHL-API-Reference>>. It covers data from high-level multi-season summaries to low-level play-by-play logs.

**License** MIT + file LICENSE

**Encoding** UTF-8

**RoxygenNote** 7.3.2

**Imports** httr, jsonlite, dplyr, tibble, magrittr

**Suggests** knitr, rmarkdown, testthat (>= 3.0.0)

**Config/testthat/edition** 3

**VignetteBuilder** knitr

**URL** <https://github.com/RentoSaijo/nhlscraper>,  
<https://rentosaijo.github.io/nhlscraper/>

**BugReports** <https://github.com/RentoSaijo/nhlscraper/issues>

**Copyright** NHL is registered trademark of the National Hockey League

**NeedsCompilation** no

**Author** Rento Saijo [aut, cre, cph] (ORCID:

---

get_configuration	<i>Get configuration for skater, goalie, and team statistics</i>
-------------------	--

---

**Description**

Get configuration for skater, goalie, and team statistics

**Usage**

```
get_configuration()
```

**Value**

list with 5 items

**Examples**

```
config <- get_configuration()
```

---

get_countries	<i>Get all countries</i>
---------------	--------------------------

---

**Description**

Get all countries

**Usage**

```
get_countries()
```

**Value**

tibble with one row per country

**Examples**

```
all_countries <- get_countries()
```

---

get\_draft\_information *Get draft information for all seasons*

---

**Description**

Get draft information for all seasons

**Usage**

```
get_draft_information()
```

**Value**

tibble with one row per season

**Examples**

```
draft_info <- get_draft_information()
```

---

get\_draft\_picks *Get draft picks by year (and round)*

---

**Description**

Get draft picks by year (and round)

**Usage**

```
get_draft_picks(year = get_season_now()$seasonId%10000 - 1, round = "all")
```

**Arguments**

year	integer Year in YYYY
round	integer or string Round of 1:7 or 'all'

**Value**

tibble with one row per pick

**Examples**

```
draft_picks_2024 <- get_draft_picks(year=2024, round='all')
```

---

get_draft_rankings	<i>Get draft rankings by year and player-type</i>
--------------------	---

---

**Description**

Get draft rankings by year and player-type

**Usage**

```
get_draft_rankings(year = get_season_now()$seasonId%10000, player_type = 1)
```

**Arguments**

year	integer Year in YYYY
player_type	integer Player-type where 1=NA Skaters, 2=Int. Skaters, 3=NA Goalies, and 4=Int. Goalies

**Value**

tibble with one row per player

**Examples**

```
draft_rankings_2025 <- get_draft_rankings(year=2025)
```

---

get_draft_tracker	<i>Get draft tracker as of now</i>
-------------------	------------------------------------

---

**Description**

Get draft tracker as of now

**Usage**

```
get_draft_tracker()
```

**Value**

tibble with one row per pick

**Examples**

```
draft_tracker <- get_draft_tracker()
```

---

get_franchises	<i>Get all franchises</i>
----------------	---------------------------

---

**Description**

Get all franchises

**Usage**

```
get_franchises()
```

**Value**

tibble with one row per franchise

**Examples**

```
all_franchises <- get_franchises()
```

---

get_games	<i>Get all games</i>
-----------	----------------------

---

**Description**

Get all games

**Usage**

```
get_games()
```

**Value**

tibble with one row per game

**Examples**

```
all_games <- get_games()
```

---

get_game_boxscore	<i>Get boxscore by game, team, and player-type</i>
-------------------	--

---

**Description**

Get boxscore by game, team, and player-type

**Usage**

```
get_game_boxscore(game = 2024020602, team = "home", player_type = "forwards")
```

**Arguments**

game	integer Game ID
team	string Team of 'home' or 'away'
player_type	string Player-type of 'forwards', 'defense', or 'goalies'

**Value**

tibble with one row per player

**Examples**

```
boxscore_2024030411_FLA_defensemen <- get_game_boxscore(  
  game=2024030411,  
  team='away',  
  player_type='defense'  
)
```

---

get_game_landing	<i>Get GC game landing by game</i>
------------------	------------------------------------

---

**Description**

Get GC game landing by game

**Usage**

```
get_game_landing(game = 2024020602)
```

**Arguments**

game	integer Game ID
------	-----------------

**Value**

list of 24 items

Examples

```
game_landing_2024030411 <- get_game_landing(game=2024030411)
```

---

get_game_story	<i>Get WSC game story by game</i>
----------------	-----------------------------------

---

Description

Get WSC game story by game

Usage

```
get_game_story(game = 2024020602)
```

Arguments

game                      integer Game ID

Value

list of 24 items

Examples

```
game_story_2024030411 <- get_game_story(game=2024030411)
```

---

get_gc_play_by_play	<i>Get GameCenter (GC) play-by-play by game</i>
---------------------	---

---

Description

Get GameCenter (GC) play-by-play by game

Usage

```
get_gc_play_by_play(game = 2024020602)
```

Arguments

game                      integer Game ID

Value

tibble with one row per play

Examples

```
gc_pbp_2024030411 <- get_gc_play_by_play(game=2024030411)
```

---

get_glossary	<i>Get glossary</i>
--------------	---------------------

---

**Description**

Get glossary

**Usage**

```
get_glossary()
```

**Value**

tibble with one row per terminology

**Examples**

```
glossary <- get_glossary()
```

---

get_goalies	<i>Get all goalies' biographies by range of seasons</i>
-------------	---

---

**Description**

Get all goalies' biographies by range of seasons

**Usage**

```
get_goalies(start_season = 19171918, end_season = get_season_now())$seasonId)
```

**Arguments**

start_season	integer Season to start search in YYYYYYYYY
end_season	integer Season to end search in YYYYYYYYY

**Value**

tibble with one row per goalie

**Examples**

```
goalies_2000s <- get_goalies(start_season=20002001, end_season=20242025)
```

---

get_goalie_leaders	<i>Get goalie statistics leaders by season, game-type, and category</i>
--------------------	---

---

**Description**

Get goalie statistics leaders by season, game-type, and category

**Usage**

```
get_goalie_leaders(  
  season = get_season_now()$seasonId,  
  game_type = 2,  
  category = "wins"  
)
```

**Arguments**

season	integer Season in YYYYYYYYY
game_type	integer Game-type where 2=regular and 3=playoffs
category	string Category e.g. wins, shutouts, savePctg, goalsAgainstAverage

**Value**

tibble with one row per goalie

**Examples**

```
playoff_savePctg_leaders_20242025 <- get_goalie_leaders(  
  season=20242025,  
  game_type=3,  
  category='savePctg'  
)
```

---

get_goalie_milestones	<i>Get goalie milestones</i>
-----------------------	------------------------------

---

**Description**

Get goalie milestones

**Usage**

```
get_goalie_milestones()
```

**Value**

tibble with one row per goalie

**Examples**

```
goalie_milestones <- get_goalie_milestones()
```

---

get_goalie_statistics	<i>Get goalie statistics by season</i>
-----------------------	--

---

**Description**

Get goalie statistics by season

**Usage**

```
get_goalie_statistics(  
  season = get_season_now()$seasonId,  
  report = "summary",  
  teams = 1:100,  
  is_aggregate = FALSE,  
  is_game = FALSE,  
  dates = c("2025-01-01"),  
  game_types = 1:3  
)
```

**Arguments**

season	integer Season in YYYYYYYYY
report	string Report (check get_configuration() for possible inputs)
teams	vector of integers Team ID(s)
is_aggregate	boolean isAggregate where TRUE=regular and playoffs combined (or multiple seasons) from multiple teams, if applicable
is_game	boolean isGame where TRUE=rows by games and FALSE=rows by goalies
dates	vector of strings Date(s) in 'YYYY-MM-DD' (only if paired with is_game)
game_types	vector of integers Game-type(s) where 1=pre-season, 2=regular, and 3=playoffs

**Value**

tibble with one row per goalie or game

**Examples**

```
playoff_goalie_svr_20242025 <- get_goalie_statistics(  
  season=20242025,  
  report='startedVsRelieved',  
  game_types=c(3)  
)
```

---

get_partner_odds	<i>Get partner odds as of now</i>
------------------	-----------------------------------

---

**Description**

Get partner odds as of now

**Usage**

```
get_partner_odds(country = "US")
```

**Arguments**

country	string 2-letter country code e.g. 'US'
---------	--

**Value**

tibble with one row per game

**Examples**

```
partner_odds_now_CA <- get_partner_odds(country='CA')
```

---

get_player_game_log	<i>Get game-log by player, season, and game-type</i>
---------------------	--

---

**Description**

Get game-log by player, season, and game-type

**Usage**

```
get_player_game_log(
  player = 8480039,
  season = get_season_now()$seasonId,
  game_type = 2
)
```

**Arguments**

player	integer Player ID
season	integer Season in YYYYYYYY
game_type	integer Game-type where 2=regular and 3=playoffs

**Value**

tibble with one row per game

**Examples**

```
playoff_Mikko_Rantanen_gl_20242025 <- get_player_game_log(  
  player=8478420,  
  season=20242025,  
  game_type=3  
)
```

---

get_player_landing	<i>Get landing by player</i>
--------------------	------------------------------

---

**Description**

Get landing by player

**Usage**

```
get_player_landing(player = 8480039)
```

**Arguments**

player	integer Player ID
--------	-------------------

**Value**

list with 36 items

**Examples**

```
Mikko_Rantanen_landing <- get_player_landing(player=8478420)
```

---

get_playoff_bracket	<i>Get playoff bracket by year</i>
---------------------	------------------------------------

---

**Description**

Get playoff bracket by year

**Usage**

```
get_playoff_bracket(year = get_season_now()$seasonId%10000)
```

**Arguments**

year                    integer Year in YYYY

**Value**

tibble with one row per match-up

**Examples**

```
bracket_2025 <- get_playoff_bracket(year=2025)
```

---

get_schedule	<i>Get schedule by date</i>
--------------	-----------------------------

---

**Description**

Get schedule by date

**Usage**

```
get_schedule(date = "2025-01-01")
```

**Arguments**

date                    string Date in 'YYYY-MM-DD'

**Value**

tibble with one row per game

**Examples**

```
schedule_2025_01_02 <- get_schedule(date='2025-01-02')
```

---

get_scoreboards	<i>Get scoreboard(s) by date</i>
-----------------	----------------------------------

---

**Description**

Get scoreboard(s) by date

**Usage**

```
get_scoreboards(date = "2025-01-01")
```

**Arguments**

date	string Date in 'YYYY-MM-DD'
------	-----------------------------

**Value**

tibble with one row per game

**Examples**

```
scoresboards_2025_01_02 <- get_scoreboards(date='2025-01-02')
```

---

get_scores	<i>Get score(s) by date</i>
------------	-----------------------------

---

**Description**

Get score(s) by date

**Usage**

```
get_scores(date = "2025-01-01")
```

**Arguments**

date	string Date in 'YYYY-MM-DD'
------	-----------------------------

**Value**

tibble with one row per game

**Examples**

```
scores_2025_01_02 <- get_scores(date='2025-01-02')
```

---

`get_seasons`*Get all seasons*

---

**Description**

Get all seasons

**Usage**

```
get_seasons()
```

**Value**

tibble with one row per season

**Examples**

```
all_seasons <- get_seasons()
```

---

`get_season_now`*Get season as of now*

---

**Description**

Get season as of now

**Usage**

```
get_season_now()
```

**Value**

tibble with one row

**Examples**

```
season_now <- get_season_now()
```

---

get_series_carousel	<i>Get playoff series carousel by season and round</i>
---------------------	--

---

**Description**

Get playoff series carousel by season and round

**Usage**

```
get_series_carousel(season = get_season_now())$seasonId, round = 1)
```

**Arguments**

season	integer Season in YYYYYYYYY
round	integer Round of 1:4

**Value**

tibble with one row per match-up

**Examples**

```
carousel_20242025_2 <- get_series_carousel(season=20242025, round=2)
```

---

get_series_schedule	<i>Get playoff series schedule</i>
---------------------	------------------------------------

---

**Description**

Get playoff series schedule

**Usage**

```
get_series_schedule(season = get_season_now())$seasonId, series = "a")
```

**Arguments**

season	integer Season in YYYYYYYYY
series	string 1-letter series code

**Value**

tibble with one row per game

**Examples**

```
COL_DAL_schedule_20242025 <- get_series_schedule(season=20242025, series='f')
```

---

get_shift_charts	<i>Get shift charts</i>
------------------	-------------------------

---

**Description**

Get shift charts

**Usage**

```
get_shift_charts(game = 2024020602)
```

**Arguments**

game                    integer Game ID

**Value**

tibble with one row per shift

**Examples**

```
shift_charts_2024030411 <- get_shift_charts(game=2024030411)
```

---

get_skaters	<i>Get all skaters' biographies by range of seasons</i>
-------------	---

---

**Description**

Get all skaters' biographies by range of seasons

**Usage**

```
get_skaters(start_season = 19171918, end_season = get_season_now())$seasonId)
```

**Arguments**

start\_season    integer Season to start search in YYYYYYYYYY  
end\_season      integer Season to end search in YYYYYYYYYY

**Value**

tibble with one row per skater

**Examples**

```
skaters_2000s <- get_skaters(start_season=20002001, end_season=20242025)
```

---

get_skater_leaders	<i>Get skater statistics leaders by season, game-type, and category</i>
--------------------	---

---

**Description**

Get skater statistics leaders by season, game-type, and category

**Usage**

```
get_skater_leaders(  
  season = get_season_now()$seasonId,  
  game_type = 2,  
  category = "points"  
)
```

**Arguments**

season	integer Season in YYYYYYYY
game_type	integer GameType where 2=regular and 3=playoffs
category	string e.g. assists, goals, goalsSh, goalsPp, points, penaltyMins, toi, plusMinus, faceoffLeaders

**Value**

tibble with one row per skater

**Examples**

```
playoff_toi_leaders_20242025 <- get_skater_leaders(  
  season=20242025,  
  game_type=3,  
  category='toi'  
)
```

---

get_skater_milestones	<i>Get skater milestones</i>
-----------------------	------------------------------

---

**Description**

Get skater milestones

**Usage**

```
get_skater_milestones()
```

**Value**

tibble with one row per skater

**Examples**

```
skater_milestones <- get_skater_milestones()
```

---

get_skater_statistics	<i>Get skater statistics by season</i>
-----------------------	--

---

**Description**

Get skater statistics by season

**Usage**

```
get_skater_statistics(  
  season = get_season_now()$seasonId,  
  report = "summary",  
  teams = 1:100,  
  is_aggregate = FALSE,  
  is_game = FALSE,  
  dates = c("2025-01-01"),  
  game_types = 1:3  
)
```

**Arguments**

season	integer Season in YYYYYYYYY
report	string Report (check get_configuration() for possible inputs)
teams	vector of integers Team ID(s)
is_aggregate	boolean isAggregate where TRUE=regular and playoffs combined (or multiple seasons) from multiple teams, if applicable
is_game	boolean isGame where TRUE=rows by games and FALSE=rows by skaters
dates	vector of strings Date(s) in 'YYYY-MM-DD' (only if paired with is_game)
game_types	vector of integers Game-type(s) where 1=pre-season, 2=regular, and 3=playoffs

**Value**

tibble with one row per skater or game

**Examples**

```
regular_skater_shootout_20242025 <- get_skater_statistics(  
  season=20242025,  
  report='shootout',  
  game_types=c(2)  
)
```

---

get_spotlight_players	<i>Get 'spotlight' players as of now</i>
-----------------------	--

---

**Description**

Get 'spotlight' players as of now

**Usage**

```
get_spotlight_players()
```

**Value**

tibble with one row per player

**Examples**

```
spotlight_players_now <- get_spotlight_players()
```

---

get_standings	<i>Get standings by date</i>
---------------	------------------------------

---

**Description**

Get standings by date

**Usage**

```
get_standings(date = "2025-01-01")
```

**Arguments**

date	string Date in 'YYYY-MM-DD'
------	-----------------------------

**Value**

tibble with one row per team

**Examples**

```
standings_2025_01_02 <- get_standings(date='2025-01-02')
```

---

get_standings_information	<i>Get standings information for all seasons</i>
---------------------------	--

---

**Description**

Get standings information for all seasons

**Usage**

```
get_standings_information()
```

**Value**

tibble with one row per season

**Examples**

```
standings_info <- get_standings_information()
```

---

get_streams	<i>Get all streams</i>
-------------	------------------------

---

**Description**

Get all streams

**Usage**

```
get_streams()
```

**Value**

tibble with one row per stream

**Examples**

```
all_streams <- get_streams()
```

---

`get_teams`*Get all teams*

---

**Description**

Get all teams

**Usage**

```
get_teams()
```

**Value**

tibble with one row per team

**Examples**

```
all_teams <- get_teams()
```

---

`get_team_prospects`*Get prospects by team and player-type*

---

**Description**

Get prospects by team and player-type

**Usage**

```
get_team_prospects(team = "BOS", player_type = "forwards")
```

**Arguments**

<code>team</code>	string 3-letter team code
<code>player_type</code>	string Player-type of 'forwards', 'defensemen', or 'goalies'

**Value**

tibble with one row per player

**Examples**

```
COL_defensemen_prospects <- get_team_prospects(  
  team='COL',  
  player_type='defensemen'  
)
```

---

get_team_roster	<i>Get roster by team, season, and player-type</i>
-----------------	--

---

**Description**

Get roster by team, season, and player-type

**Usage**

```
get_team_roster(  
  team = "BOS",  
  season = get_season_now()$seasonId,  
  player_type = "forwards"  
)
```

**Arguments**

team	string 3-letter team code
season	integer Season in YYYYYYYY
player_type	string Player-type of 'forwards', 'defensemen', or 'goalies'

**Value**

tibble with one row per player

**Examples**

```
COL_defensemen_20242025 <- get_team_roster(  
  team='COL ',  
  season=20242025,  
  player_type='defensemen'  
)
```

---

get_team_roster_statistics	<i>Get roster statistics by team, season, game-type, and player-type</i>
----------------------------	--

---

**Description**

Get roster statistics by team, season, game-type, and player-type

**Usage**

```
get_team_roster_statistics(  
  team = "BOS",  
  season = get_season_now()$seasonId,  
  game_type = 2,  
  player_type = "skaters"  
)
```

**Arguments**

- team                    string 3-letter team code
- season                 integer Season in YYYYYYYY
- game\_type             integer Game-type where 2=regular and 3=playoffs
- player\_type           string Player-type of 'skaters' or 'goalies'

**Value**

tibble with one row per player

**Examples**

```
regular_COL_goalies_statistics_20242025 <- get_team_roster_statistics(  
  team='COL',  
  season=20242025,  
  game_type=2,  
  player_type='goalies'  
)
```

---

get_team_schedule	<i>Get schedule by team and season</i>
-------------------	--

---

**Description**

Get schedule by team and season

**Usage**

```
get_team_schedule(team = "BOS", season = get_season_now()$seasonId)
```

**Arguments**

- team                    string 3-letter team code
- season                 integer Season in YYYYYYYY

**Value**

tibble with one row per game

**Examples**

```
COL_schedule_20242025 <- get_team_schedule(team='COL', season=20242025)
```

---

```
get_team_scoreboard
```

*Get team scoreboard as of now*

---

**Description**

Get team scoreboard as of now

**Usage**

```
get_team_scoreboard(team = "BOS")
```

**Arguments**

team                      string 3-letter team code

**Value**

tibble with one row per game

**Examples**

```
FLA_scoreboard_now <- get_team_scoreboard(team='FLA')
```

---

```
get_team_seasons
```

*Get season(s) for which team played in regular season and/or playoffs*

---

**Description**

Get season(s) for which team played in regular season and/or playoffs

**Usage**

```
get_team_seasons(team = "BOS")
```

**Arguments**

team                      string 3-letter team code

**Value**

tibble with one row per season

**Examples**

```
COL_seasons <- get_team_seasons(team='COL')
```

---

get_team_statistics	<i>Get team statistics by season</i>
---------------------	--------------------------------------

---

## Description

Get team statistics by season

## Usage

```
get_team_statistics(  
  season = get_season_now()$seasonId,  
  report = "summary",  
  is_aggregate = FALSE,  
  is_game = FALSE,  
  dates = c("2025-01-01"),  
  game_types = 1:3  
)
```

## Arguments

season	integer Season in YYYYYYYY
report	string Report (check get_configuration() for possible inputs)
is_aggregate	boolean isAggregate where TRUE=regular and playoffs combined, if applicable
is_game	boolean isGame where TRUE=rows by games and FALSE=rows by teams
dates	vector of strings Date(s) in 'YYYY-MM-DD' (only if paired with is_game; too many dates will result in incomplete data)
game_types	vector of integers Game-type(s) where 1=pre-season, 2=regular, and 3=playoffs

## Value

tibble with one row per team or game

## Examples

```
playoff_team_stf_20242025 <- get_team_statistics(  
  season=20242025,  
  report='scoretrailfirst',  
  game_types=c(3)  
)
```

---

get_tv_schedule	<i>Get TV schedule by date</i>
-----------------	--------------------------------

---

**Description**

Get TV schedule by date

**Usage**

```
get_tv_schedule(date = "2025-01-01")
```

**Arguments**

date                      string Date in 'YYYY-MM-DD'

**Value**

tibble with one row per program

**Examples**

```
tv_schedule_2025_01_02 <- get_tv_schedule(date='2025-01-02')
```

---

get_wsc_play_by_play	<i>Get World Showcase (WSC) play-by-play by game</i>
----------------------	--

---

**Description**

Get World Showcase (WSC) play-by-play by game

**Usage**

```
get_wsc_play_by_play(game = 2024020602)
```

**Arguments**

game                      integer Game ID

**Value**

tibble with one row per play

**Examples**

```
wsc_pbp_2024030411 <- get_wsc_play_by_play(game=2024030411)
```

---

*ping*

---

*Ping***Description**

Ping

**Usage**`ping()`**Value**

boolean TRUE=status is okay and FALSE=status is not okay

**Examples**

```
online <- ping()
```
