

# Package ‘boostmath’

July 25, 2025

**Title** 'R' Bindings for the 'Boost' Math Functions

**Version** 1.0.0

**Description** 'R' bindings for the various functions and statistical distributions provided by the 'Boost' Math library <[https://www.boost.org/doc/libs/boost\\_1\\_88\\_0/libs/math/doc/html/index.html](https://www.boost.org/doc/libs/boost_1_88_0/libs/math/doc/html/index.html)>.

**License** MIT + file LICENSE

**URL** <https://github.com/andrjohns/boostmath>,  
[https://www.boost.org/doc/libs/boost\\_1\\_88\\_0/libs/math/doc/html/index.html](https://www.boost.org/doc/libs/boost_1_88_0/libs/math/doc/html/index.html)

**BugReports** <https://github.com/andrjohns/boostmath/issues>

**Encoding** UTF-8

**RoxygenNote** 7.3.2

**Depends** R (>= 3.0.2)

**LinkingTo** cpp11, BH (>= 1.87.0)

**NeedsCompilation** yes

**Suggests** knitr, rmarkdown, tinytest

**VignetteBuilder** knitr

**Author** Andrew R. Johnson [aut, cre] (ORCID:  
<<https://orcid.org/0000-0001-7000-8065>>)

**Maintainer** Andrew R. Johnson <[andrew.johnson@arjohnsonau.com](mailto:andrew.johnson@arjohnsonau.com)>

**Repository** CRAN

**Date/Publication** 2025-07-25 16:20:07 UTC

airy_functions	<i>Airy Functions</i>
----------------	-----------------------

---

**Description**

Functions to compute the Airy functions  $A_i$  and  $B_i$ , their derivatives, and their zeros.

**Usage**

```
airy_ai(x)

airy_bi(x)

airy_ai_prime(x)

airy_bi_prime(x)

airy_ai_zero(m = NULL, start_index = NULL, number_of_zeros = NULL)

airy_bi_zero(m = NULL, start_index = NULL, number_of_zeros = NULL)
```

**Arguments**

- x                   Input numeric value
- m                   The index of the zero to find (1-based).
- start\_index        The starting index for the zeros (1-based).
- number\_of\_zeros    The number of zeros to find.

**Value**

Single numeric value for the Airy functions and their derivatives, or a vector of length `number_of_zeros` for the multiple zero functions.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
airy_ai(2)
airy_bi(2)
airy_ai_prime(2)
airy_bi_prime(2)
airy_ai_zero(1)
airy_bi_zero(1)
airy_ai_zero(start_index = 1, number_of_zeros = 5)
airy_bi_zero(start_index = 1, number_of_zeros = 5)
```

---

arcsine\_distribution    *Arcsine Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the arcsine distribution.

**Usage**

```
arcsine_pdf(x, x_min = 0, x_max = 1)

arcsine_lpdf(x, x_min = 0, x_max = 1)

arcsine_cdf(x, x_min = 0, x_max = 1)

arcsine_lcdf(x, x_min = 0, x_max = 1)

arcsine_quantile(p, x_min = 0, x_max = 1)
```

**Arguments**

<code>x</code>	quantile
<code>x_min</code>	minimum value of the distribution (default is 0)
<code>x_max</code>	maximum value of the distribution (default is 1)
<code>p</code>	probability

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
arcsine_pdf(0.5)
arcsine_lpdf(0.5)
arcsine_cdf(0.5)
arcsine_lcdf(0.5)
arcsine_quantile(0.5)
```

---

basic\_functions

*Basic Mathematical Functions*

---

**Description**

Functions to compute sine, cosine, logarithm, exponential, cube root, square root, power, hypotenuse, and inverse square root.

**Usage**

```
sin_pi(x)

cos_pi(x)

log1p_boost(x)

expm1_boost(x)

cbrt(x)

sqrt1pm1(x)

powm1(x, y)

hypot(x, y)

rsqrt(x)
```

**Arguments**

x	Input numeric value
y	Second input numeric value (for power and hypotenuse functions)

**Value**

A single numeric value with the computed result of the function.

**See Also**

[Boost Documentation](#)) for more details on the mathematical background.

**Examples**

```
# sin(pi * 0.5)
sin_pi(0.5)
# cos(pi * 0.5)
cos_pi(0.5)
# log(1 + 0.5)
log1p_boost(0.5)
# exp(0.5) - 1
expm1_boost(0.5)
cbrt(8)
# sqrt(1 + 0.5) - 1
sqrt1pm1(0.5)
# 2^3 - 1
powm1(2, 3)
hypot(3, 4)
rsqrt(4)
```

---

bernoulli\_distribution

*Bernoulli Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Bernoulli distribution.

**Usage**

```
bernoulli_pdf(x, p_success)

bernoulli_lpdf(x, p_success)

bernoulli_cdf(x, p_success)

bernoulli_lcdf(x, p_success)

bernoulli_quantile(p, p_success)
```

**Arguments**

x	quantile (0 or 1)
p_success	probability of success ( $0 \leq p\_success \leq 1$ )
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
bernoulli_pdf(1, 0.5)
bernoulli_lpdf(1, 0.5)
bernoulli_cdf(1, 0.5)
bernoulli_lcdf(1, 0.5)
bernoulli_quantile(0.5, 0.5)
```

---

bessel\_functions

*Bessel Functions, Their Derivatives, and Zeros*

---

**Description**

Functions to compute Bessel functions of the first and second kind, their modified versions, spherical Bessel functions, and their derivatives and zeros.

**Usage**

```
cyl_bessel_j(v, x)

cyl_neumann(v, x)

cyl_bessel_j_zero(v, m = NULL, start_index = NULL, number_of_zeros = NULL)

cyl_neumann_zero(v, m = NULL, start_index = NULL, number_of_zeros = NULL)

cyl_bessel_i(v, x)

cyl_bessel_k(v, x)

sph_bessel(v, x)

sph_neumann(v, x)
```

```
cyl_bessel_j_prime(v, x)
```

```
cyl_neumann_prime(v, x)
```

```
cyl_bessel_i_prime(v, x)
```

```
cyl_bessel_k_prime(v, x)
```

```
sph_bessel_prime(v, x)
```

```
sph_neumann_prime(v, x)
```

### Arguments

v	Order of the Bessel function
x	Argument of the Bessel function
m	The index of the zero to find (1-based).
start_index	The starting index for the zeros (1-based).
number_of_zeros	The number of zeros to find.

### Value

Single numeric value for the Bessel functions and their derivatives, or a vector of length `number_of_zeros` for the multiple zero functions.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Bessel function of the first kind J_0(1)
cyl_bessel_j(0, 1)
# Bessel function of the second kind Y_0(1)
cyl_neumann(0, 1)
# Modified Bessel function of the first kind I_0(1)
cyl_bessel_i(0, 1)
# Modified Bessel function of the second kind K_0(1)
cyl_bessel_k(0, 1)
# Spherical Bessel function of the first kind j_0(1)
sph_bessel(0, 1)
# Spherical Bessel function of the second kind y_0(1)
sph_neumann(0, 1)
# Derivative of the Bessel function of the first kind J_0(1)
cyl_bessel_j_prime(0, 1)
# Derivative of the Bessel function of the second kind Y_0(1)
cyl_neumann_prime(0, 1)
# Derivative of the modified Bessel function of the first kind I_0(1)
```

```

cyl_bessel_i_prime(0, 1)
# Derivative of the modified Bessel function of the second kind K_0(1)
cyl_bessel_k_prime(0, 1)
# Derivative of the spherical Bessel function of the first kind j_0(1)
sph_bessel_prime(0, 1)
# Derivative of the spherical Bessel function of the second kind y_0(1)
sph_neumann_prime(0, 1)
# Finding the first zero of the Bessel function of the first kind J_0
cyl_bessel_j_zero(0, 1)
# Finding the first zero of the Bessel function of the second kind Y_0
cyl_neumann_zero(0, 1)
# Finding multiple zeros of the Bessel function of the first kind J_0 starting from index 1
cyl_bessel_j_zero(0, start_index = 1, number_of_zeros = 5)
# Finding multiple zeros of the Bessel function of the second kind Y_0 starting from index 1
cyl_neumann_zero(0, start_index = 1, number_of_zeros = 5)

```

---

beta_distribution	<i>Beta Distribution Functions</i>
-------------------	------------------------------------

---

## Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Beta distribution.

## Usage

```

beta_pdf(x, alpha, beta)

beta_lpdf(x, alpha, beta)

beta_cdf(x, alpha, beta)

beta_lcdf(x, alpha, beta)

beta_quantile(p, alpha, beta)

```

## Arguments

x	quantile ( $0 \leq x \leq 1$ )
alpha	shape parameter ( $\alpha > 0$ )
beta	shape parameter ( $\beta > 0$ )
p	probability ( $0 \leq p \leq 1$ )

## Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Beta distribution with shape parameters alpha = 2, beta = 5
beta_pdf(0.5, 2, 5)
beta_lpdf(0.5, 2, 5)
beta_cdf(0.5, 2, 5)
beta_lcdf(0.5, 2, 5)
beta_quantile(0.5, 2, 5)
```

---

beta\_functions

*Beta Functions*

---

**Description**

Functions to compute the Euler beta function, normalised incomplete beta function, and their complements, as well as their inverses and derivatives.

**Usage**

```
beta_boost(a, b, x = NULL)

ibeta(a, b, x)

ibetac(a, b, x)

betac(a, b, x)

ibeta_inv(a, b, p)

ibetac_inv(a, b, q)

ibeta_inva(b, x, p)

ibetac_inva(b, x, q)

ibeta_invb(a, x, p)

ibetac_invb(a, x, q)

ibeta_derivative(a, b, x)
```

**Arguments**

a	First parameter of the beta function
b	Second parameter of the beta function
x	Upper limit of integration ( $0 \leq x \leq 1$ )
p	Probability value ( $0 \leq p \leq 1$ )
q	Probability value ( $0 \leq q \leq 1$ )

**Value**

A single numeric value with the computed beta function, normalised incomplete beta function, or their complements, depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
## Not run:
# Euler beta function B(2, 3)
beta_boost(2, 3)
# Normalised incomplete beta function I_x(2, 3) for x = 0.5
ibeta(2, 3, 0.5)
# Normalised complement of the incomplete beta function 1 - I_x(2, 3) for x = 0.5
ibetac(2, 3, 0.5)
# Full incomplete beta function B_x(2, 3) for x = 0.5
beta_boost(2, 3, 0.5)
# Full complement of the incomplete beta function 1 - B_x(2, 3) for x = 0.5
betac(2, 3, 0.5)
# Inverse of the normalised incomplete beta function I_x(2, 3) = 0.5
ibeta_inv(2, 3, 0.5)
# Inverse of the normalised complement of the incomplete beta function I_x(2, 3) = 0.5
ibetac_inv(2, 3, 0.5)
# Inverse of the normalised complement of the incomplete beta function I_x(a, b)
# with respect to a for x = 0.5 and q = 0.5
ibetac_inva(3, 0.5, 0.5)
# Inverse of the normalised incomplete beta function I_x(a, b)
# with respect to b for x = 0.5 and p = 0.5
ibeta_invb(0.8, 0.5, 0.5)
# Inverse of the normalised complement of the incomplete beta function I_x(a, b)
# with respect to b for x = 0.5 and q = 0.5
ibetac_invb(2, 0.5, 0.5)
# Derivative of the incomplete beta function with respect to x for a = 2, b = 3, x = 0.5
ibeta_derivative(2, 3, 0.5)

## End(Not run)
```

---

**binomial\_distribution** *Binomial Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Binomial distribution.

**Usage**

```
binomial_pdf(k, n, prob)
binomial_lpdf(k, n, prob)
binomial_cdf(k, n, prob)
binomial_lcdf(k, n, prob)
binomial_quantile(p, n, prob)
```

**Arguments**

k	number of successes ( $0 \leq k \leq n$ )
n	number of trials ( $n \geq 0$ )
prob	probability of success on each trial ( $0 \leq \text{prob} \leq 1$ )
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Binomial distribution with n = 10, prob = 0.5
binomial_pdf(3, 10, 0.5)
binomial_lpdf(3, 10, 0.5)
binomial_cdf(3, 10, 0.5)
binomial_lcdf(3, 10, 0.5)
binomial_quantile(0.5, 10, 0.5)
```

---

cauchy_distribution	<i>Cauchy Distribution Functions</i>
---------------------	--------------------------------------

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Cauchy distribution.

**Usage**

```
cauchy_pdf(x, location = 0, scale = 1)

cauchy_lpdf(x, location = 0, scale = 1)

cauchy_cdf(x, location = 0, scale = 1)

cauchy_lcdf(x, location = 0, scale = 1)

cauchy_quantile(p, location = 0, scale = 1)
```

**Arguments**

x	quantile
location	location parameter (default is 0)
scale	scale parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Cauchy distribution with location = 0, scale = 1
cauchy_pdf(0)
cauchy_lpdf(0)
cauchy_cdf(0)
cauchy_lcdf(0)
cauchy_quantile(0.5)
```

---

chebyshev\_polynomials *Chebyshev Polynomials and Related Functions*

---

**Description**

Functions to compute Chebyshev polynomials of the first and second kind.

**Usage**

```
chebyshev_next(x, Tn, Tn_1)
```

```
chebyshev_t(n, x)
```

```
chebyshev_u(n, x)
```

```
chebyshev_t_prime(n, x)
```

```
chebyshev_clenshaw_recurrence(c, x)
```

```
chebyshev_clenshaw_recurrence_ab(c, a, b, x)
```

**Arguments**

x	Argument of the polynomial
Tn	Value of the Chebyshev polynomial ( $T_n(x)$ )
Tn_1	Value of the Chebyshev polynomial ( $T_{n-1}(x)$ )
n	Degree of the polynomial
c	Coefficients of the Chebyshev polynomial
a	Lower bound of the interval
b	Upper bound of the interval

**Value**

A single numeric value with the computed Chebyshev polynomial, its derivative, or related functions.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```

# Chebyshev polynomial of the first kind T_2(0.5)
chebyshev_t(2, 0.5)
# Chebyshev polynomial of the second kind U_2(0.5)
chebyshev_u(2, 0.5)
# Derivative of the Chebyshev polynomial of the first kind T_2'(0.5)
chebyshev_t_prime(2, 0.5)
# Next Chebyshev polynomial of the first kind T_3(0.5) using T_2(0.5) and T_1(0.5)
chebyshev_next(0.5, chebyshev_t(2, 0.5), chebyshev_t(1, 0.5))
# Chebyshev polynomial of the first kind using Clenshaw's recurrence with coefficients
# c = c(1, 0, -1) at x = 0.5
chebyshev_clenshaw_recurrence(c(1, 0, -1), 0.5)
# Chebyshev polynomial of the first kind using Clenshaw's recurrence with interval [0, 1]
chebyshev_clenshaw_recurrence_ab(c(1, 0, -1), 0, 1, 0.5)

```

---

chi\_squared\_distribution

*Chi-Squared Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Chi-Squared distribution.

**Usage**

```

chi_squared_pdf(x, df)

chi_squared_lpdf(x, df)

chi_squared_cdf(x, df)

chi_squared_lcdf(x, df)

chi_squared_quantile(p, df)

```

**Arguments**

x	quantile
df	degrees of freedom (df > 0)
p	probability (0 <= p <= 1)

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Chi-Squared distribution with 3 degrees of freedom
chi_squared_pdf(2, 3)
chi_squared_lpdf(2, 3)
chi_squared_cdf(2, 3)
chi_squared_lcdf(2, 3)
chi_squared_quantile(0.5, 3)
```

---

double\_exponential\_quadrature

*Double Exponential Quadrature*

---

**Description**

Functions for numerical integration using double exponential quadrature methods such as tanh-sinh, sinh-sinh, and exp-sinh quadrature.

**Usage**

```
tanh_sinh(f, a, b, tol = sqrt(.Machine$double.eps), max_refinements = 15)
```

```
sinh_sinh(f, tol = sqrt(.Machine$double.eps), max_refinements = 9)
```

```
exp_sinh(f, a, b, tol = sqrt(.Machine$double.eps), max_refinements = 9)
```

**Arguments**

f	A function to integrate. It should accept a single numeric value and return a single numeric value.
a	The lower limit of integration.
b	The upper limit of integration.
tol	The tolerance for the approximation. Default is <code>sqrt(.Machine\$double.eps)</code> .
max_refinements	The maximum number of refinements to apply. Default is 15 for tanh-sinh and 9 for sinh-sinh and exp-sinh.

**Value**

A single numeric value with the computed integral.

**Examples**

```
# Tanh-sinh quadrature of log(x) from 0 to 1
tanh_sinh(function(x) { log(x) * log1p(-x) }, a = 0, b = 1)
# Sinh-sinh quadrature of exp(-x^2)
sinh_sinh(function(x) { exp(-x * x) })
# Exp-sinh quadrature of exp(-3*x) from 0 to Inf
exp_sinh(function(x) { exp(-3 * x) }, a = 0, b = Inf)
```

---

elliptic\_integrals      *Elliptic Integrals*

---

**Description**

Functions to compute various elliptic integrals, including Carlson's elliptic integrals and incomplete elliptic integrals.

**Usage**

```
ellint_rf(x, y, z)
ellint_rd(x, y, z)
ellint_rj(x, y, z, p)
ellint_rc(x, y)
ellint_rg(x, y, z)
ellint_1(k, phi = NULL)
ellint_2(k, phi = NULL)
ellint_3(k, n, phi = NULL)
ellint_d(k, phi = NULL)
jacobi_zeta(k, phi)
heuman_lambda(k, phi)
```

**Arguments**

x	First parameter of the integral
y	Second parameter of the integral
z	Third parameter of the integral
p	Fourth parameter of the integral (for Rj)

k	Elliptic modulus (for incomplete elliptic integrals)
phi	Amplitude (for incomplete elliptic integrals)
n	Characteristic (for incomplete elliptic integrals of the third kind)

**Value**

A single numeric value with the computed elliptic integral.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Carlson's elliptic integral Rf with parameters x = 1, y = 2, z = 3
ellint_rf(1, 2, 3)
# Carlson's elliptic integral Rd with parameters x = 1, y = 2, z = 3
ellint_rd(1, 2, 3)
# Carlson's elliptic integral Rj with parameters x = 1, y = 2, z = 3, p = 4
ellint_rj(1, 2, 3, 4)
# Carlson's elliptic integral Rc with parameters x = 1, y = 2
ellint_rc(1, 2)
# Carlson's elliptic integral Rg with parameters x = 1, y = 2, z = 3
ellint_rg(1, 2, 3)
# Incomplete elliptic integral of the first kind with k = 0.5, phi = pi/4
ellint_1(0.5, pi / 4)
# Complete elliptic integral of the first kind
ellint_1(0.5)
# Incomplete elliptic integral of the second kind with k = 0.5, phi = pi/4
ellint_2(0.5, pi / 4)
# Complete elliptic integral of the second kind
ellint_2(0.5)
# Incomplete elliptic integral of the third kind with k = 0.5, n = 0.5, phi = pi/4
ellint_3(0.5, 0.5, pi / 4)
# Complete elliptic integral of the third kind with k = 0.5, n = 0.5
ellint_3(0.5, 0.5)
# Incomplete elliptic integral D with k = 0.5, phi = pi/4
ellint_d(0.5, pi / 4)
# Complete elliptic integral D
ellint_d(0.5)
# Jacobi zeta function with k = 0.5, phi = pi/4
jacobi_zeta(0.5, pi / 4)
# Heuman's lambda function with k = 0.5, phi = pi/4
heuman_lambda(0.5, pi / 4)
```

**Description**

Functions to compute the error function, complementary error function, and their inverses.

**Usage**

```
erf(x)

erfc(x)

erf_inv(p)

erfc_inv(p)
```

**Arguments**

x	Input numeric value
p	Probability value ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed error function, complementary error function, or their inverses.

**See Also**

[Boost Documentation](#) for more details

**Examples**

```
# Error function
erf(0.5)
# Complementary error function
erfc(0.5)
# Inverse error function
erf_inv(0.5)
# Inverse complementary error function
erfc_inv(0.5)
```

---

`exponential_distribution`*Exponential Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Exponential distribution.

**Usage**

```
exponential_pdf(x, lambda)

exponential_lpdf(x, lambda)

exponential_cdf(x, lambda)

exponential_lcdf(x, lambda)

exponential_quantile(p, lambda)
```

**Arguments**

<code>x</code>	quantile
<code>lambda</code>	rate parameter ( $\lambda > 0$ )
<code>p</code>	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Exponential distribution with rate parameter lambda = 2
exponential_pdf(1, 2)
exponential_lpdf(1, 2)
exponential_cdf(1, 2)
exponential_lcdf(1, 2)
exponential_quantile(0.5, 2)
```

---

exponential\_integrals *Exponential Integrals*

---

### Description

Functions to compute various exponential integrals, including  $E_n$  and  $E_i$ .

### Usage

```
expint_en(n, z)
```

```
expint_ei(z)
```

### Arguments

n	Order of the integral (for $E_n$ )
z	Argument of the integral (for $E_n$ and $E_i$ )

### Value

A single numeric value with the computed exponential integral.

### See Also

[Boost Documentation](#) for

### Examples

```
# Exponential integral  $E_n$  with  $n = 1$  and  $z = 2$ 
expint_en(1, 2)
# Exponential integral  $E_i$  with  $z = 2$ 
expint_ei(2)
```

---

extreme\_value\_distribution  
*Extreme Value Distribution Functions*

---

### Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Extreme Value distribution.

**Usage**

```
extreme_value_pdf(x, location = 0, scale = 1)

extreme_value_lpdf(x, location = 0, scale = 1)

extreme_value_cdf(x, location = 0, scale = 1)

extreme_value_lcdf(x, location = 0, scale = 1)

extreme_value_quantile(p, location = 0, scale = 1)
```

**Arguments**

x	quantile
location	location parameter (default is 0)
scale	scale parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Extreme Value distribution with location = 0, scale = 1
extreme_value_pdf(0)
extreme_value_lpdf(0)
extreme_value_cdf(0)
extreme_value_lcdf(0)
extreme_value_quantile(0.5)
```

---

factorials\_and\_binomial\_coefficients

*Factorials and Binomial Coefficients*

---

**Description**

Functions to compute factorials, double factorials, rising and falling factorials, and binomial coefficients.

**Usage**

```
factorial_boost(i)

unchecked_factorial(i)

max_factorial()

double_factorial(i)

rising_factorial(x, i)

falling_factorial(x, i)

binomial_coefficient(n, k)
```

**Arguments**

i	Non-negative integer input for factorials and double factorials.
x	Base value for rising and falling factorials.
n	Total number of elements for binomial coefficients.
k	Number of elements to choose for binomial coefficients.

**Value**

A single numeric value with the computed factorial, double factorial, rising factorial, falling factorial, or binomial coefficient.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Factorial of 5
factorial_boost(5)
# Unchecked factorial of 5 (using table lookup)
unchecked_factorial(5)
# Maximum factorial value that can be computed
max_factorial()
# Double factorial of 6
double_factorial(6)
# Rising factorial of 3 with exponent 2
rising_factorial(3, 2)
# Falling factorial of 3 with exponent 2
falling_factorial(3, 2)
# Binomial coefficient "5 choose 2"
binomial_coefficient(5, 2)
```

---

**fisher\_f\_distribution** *Fisher F Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Fisher F distribution.

**Usage**

```
fisher_f_pdf(x, df1, df2)

fisher_f_lpdf(x, df1, df2)

fisher_f_cdf(x, df1, df2)

fisher_f_lcdf(x, df1, df2)

fisher_f_quantile(p, df1, df2)
```

**Arguments**

x	quantile
df1	degrees of freedom for the numerator ( $df1 > 0$ )
df2	degrees of freedom for the denominator ( $df2 > 0$ )
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Fisher F distribution with df1 = 5, df2 = 2
fisher_f_pdf(1, 5, 2)
fisher_f_lpdf(1, 5, 2)
fisher_f_cdf(1, 5, 2)
fisher_f_lcdf(1, 5, 2)
fisher_f_quantile(0.5, 5, 2)
```

---

gamma_distribution	<i>Gamma Distribution Functions</i>
--------------------	-------------------------------------

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Gamma distribution.

**Usage**

```
gamma_pdf(x, shape, scale)

gamma_lpdf(x, shape, scale)

gamma_cdf(x, shape, scale)

gamma_lcdf(x, shape, scale)

gamma_quantile(p, shape, scale)
```

**Arguments**

x	quantile
shape	shape parameter (shape > 0)
scale	scale parameter (scale > 0)
p	probability (0 <= p <= 1)

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Gamma distribution with shape = 3, scale = 4
gamma_pdf(2, 3, 4)
gamma_lpdf(2, 3, 4)
gamma_cdf(2, 3, 4)
gamma_lcdf(2, 3, 4)
gamma_quantile(0.5, 3, 4)
```

---

`gamma_functions`*Gamma Functions*

---

**Description**

Functions to compute the gamma function, its logarithm, digamma, trigamma, polygamma, and various incomplete gamma functions.

**Usage**`tgamma(z)``tgamma1pm1(z)``lgamma_boost(z)``digamma_boost(z)``trigamma_boost(z)``polygamma(n, z)``tgamma_ratio(a, b)``tgamma_delta_ratio(a, delta)``gamma_p(a, z)``gamma_q(a, z)``tgamma_lower(a, z)``tgamma_upper(a, z)``gamma_q_inv(a, q)``gamma_p_inv(a, p)``gamma_q_inva(z, q)``gamma_p_inva(z, p)``gamma_p_derivative(a, z)`**Arguments**

`z`                      Input numeric value for the gamma function

n	Order of the polygamma function (non-negative integer)
a	Argument for the incomplete gamma functions
b	Denominator argument for the ratio of gamma functions
delta	Increment for the ratio of gamma functions
q	Probability value for the incomplete gamma functions
p	Probability value for the incomplete gamma functions

**Value**

A single numeric value with the computed gamma function, logarithm, digamma, trigamma, polygamma, or incomplete gamma functions.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
## Not run:
# Gamma function for z = 5
tgamma(5)
# Gamma function for (1 + z) - 1, where z = 5
tgamma1pm1(5)
# Logarithm of the gamma function for z = 5
lgamma_boost(5)
# Digamma function for z = 5
digamma_boost(5)
# Trigamma function for z = 5
trigamma_boost(5)
# Polygamma function of order 1 for z = 5
polygamma(1, 5)
# Ratio of gamma functions for a = 5, b = 3
tgamma_ratio(5, 3)
# Ratio of gamma functions with delta for a = 5, delta = 2
tgamma_delta_ratio(5, 2)
# Normalised lower incomplete gamma function P(a, z) for a = 5, z = 2
gamma_p(5, 2)
# Normalised upper incomplete gamma function Q(a, z) for a = 5, z = 2
gamma_q(5, 2)
# Full lower incomplete gamma function for a = 5, z = 2
tgamma_lower(5, 2)
# Full upper incomplete gamma function for a = 5, z = 2
tgamma_upper(5, 2)
# Inverse of the normalised upper incomplete gamma function for a = 5, q = 0.5
gamma_q_inv(5, 0.5)
# Inverse of the normalised lower incomplete gamma function for a = 5, p = 0.5
gamma_p_inv(5, 0.5)
# Inverse of the normalised upper incomplete gamma function with respect to a for z = 2, q = 0.5
gamma_q_inva(2, 0.5)
# Inverse of the normalised lower incomplete gamma function with respect to a for z = 2, p = 0.5
```

```

gamma_p_inva(2, 0.5)
# Derivative of the normalised upper incomplete gamma function for a = 5, z = 2
gamma_p_derivative(5, 2)

## End(Not run)

```

---

gegenbauer\_polynomials

*Gegenbauer Polynomials and Related Functions*

---

## Description

Functions to compute Gegenbauer polynomials, their derivatives, and related functions.

## Usage

```

gegenbauer(n, lambda, x)

gegenbauer_prime(n, lambda, x)

gegenbauer_derivative(n, lambda, x, k)

```

## Arguments

n	Degree of the polynomial
lambda	Parameter of the polynomial
x	Argument of the polynomial
k	Order of the derivative

## Value

A single numeric value with the computed Gegenbauer polynomial, its derivative, or k-th derivative.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

## Examples

```

# Gegenbauer polynomial C_2^(1)(0.5)
gegenbauer(2, 1, 0.5)
# Derivative of the Gegenbauer polynomial C_2^(1)'(0.5)
gegenbauer_prime(2, 1, 0.5)
# k-th derivative of the Gegenbauer polynomial C_2^(1)''(0.5)
gegenbauer_derivative(2, 1, 0.5, 2)

```

---

`geometric_distribution`*Geometric Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Geometric distribution.

**Usage**`geometric_pdf(x, prob)``geometric_lpdf(x, prob)``geometric_cdf(x, prob)``geometric_lcdf(x, prob)``geometric_quantile(p, prob)`**Arguments**

<code>x</code>	quantile (non-negative integer)
<code>prob</code>	probability of success ( $0 < \text{prob} < 1$ )
<code>p</code>	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Geometric distribution with probability of success prob = 0.5
geometric_pdf(3, 0.5)
geometric_lpdf(3, 0.5)
geometric_cdf(3, 0.5)
geometric_lcdf(3, 0.5)
geometric_quantile(0.5, 0.5)
```

---

hankel_functions	<i>Hankel Functions</i>
------------------	-------------------------

---

**Description**

Functions to compute cyclic and spherical Hankel functions of the first and second kinds.

**Usage**

`cyl_hankel_1(v, x)`

`cyl_hankel_2(v, x)`

`sph_hankel_1(v, x)`

`sph_hankel_2(v, x)`

**Arguments**

<code>v</code>	Order of the Hankel function
<code>x</code>	Argument of the Hankel function

**Value**

A single complex value with the computed Hankel function.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
cyl_hankel_1(2, 0.5)
cyl_hankel_2(2, 0.5)
sph_hankel_1(2, 0.5)
sph_hankel_2(2, 0.5)
```

---

hermite_polynomials	<i>Hermite Polynomials and Related Functions</i>
---------------------	--

---

**Description**

Functions to compute Hermite polynomials.

**Usage**

```
hermite(n, x)

hermite_next(n, x, Hn, Hnm1)
```

**Arguments**

n	Degree of the polynomial
x	Argument of the polynomial
Hn	Value of the Hermite polynomial ( $H_n(x)$ )
Hnm1	Value of the Hermite polynomial ( $H_{n-1}(x)$ )

**Value**

A single numeric value with the computed Hermite polynomial or its next value.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Hermite polynomial H_2(0.5)
hermite(2, 0.5)
# Next Hermite polynomial H_3(0.5) using H_2(0.5) and H_1(0.5)
hermite_next(2, 0.5, hermite(2, 0.5), hermite(1, 0.5))
```

---

holtsmark\_distribution

*Holtsmark Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Holtsmark distribution.

**Usage**

```
holtsmark_pdf(x, location = 0, scale = 1)

holtsmark_lpdf(x, location = 0, scale = 1)

holtsmark_cdf(x, location = 0, scale = 1)

holtsmark_lcdf(x, location = 0, scale = 1)

holtsmark_quantile(p, location = 0, scale = 1)
```

**Arguments**

x	quantile
location	location parameter (default is 0)
scale	scale parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Distribution only available with Boost version 1.87.0 or later.
## Not run:
# Holtsmark distribution with location 0 and scale 1
  holtsmark_pdf(3)
  holtsmark_lpdf(3)
  holtsmark_cdf(3)
  holtsmark_lcdf(3)
  holtsmark_quantile(0.5)

## End(Not run)
```

---

hyperexponential\_distribution

*Hyperexponential Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Hyperexponential distribution.

**Usage**

```
hyperexponential_pdf(x, probabilities, rates)

hyperexponential_lpdf(x, probabilities, rates)

hyperexponential_cdf(x, probabilities, rates)

hyperexponential_lcdf(x, probabilities, rates)

hyperexponential_quantile(p, probabilities, rates)
```

**Arguments**

x	quantile
probabilities	vector of probabilities (sum must be 1)
rates	vector of rates (all rates must be > 0)
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Hyperexponential distribution with probabilities = c(0.5, 0.5) and rates = c(1, 2)
hyperexponential_pdf(2, c(0.5, 0.5), c(1, 2))
hyperexponential_lpdf(2, c(0.5, 0.5), c(1, 2))
hyperexponential_cdf(2, c(0.5, 0.5), c(1, 2))
hyperexponential_lcdf(2, c(0.5, 0.5), c(1, 2))
hyperexponential_quantile(0.5, c(0.5, 0.5), c(1, 2))
```

---

hypergeometric\_distribution

*Hypergeometric Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Hypergeometric distribution.

**Usage**

```
hypergeometric_pdf(x, r, n, N)

hypergeometric_lpdf(x, r, n, N)

hypergeometric_cdf(x, r, n, N)

hypergeometric_lcdf(x, r, n, N)

hypergeometric_quantile(p, r, n, N)
```

**Arguments**

x	quantile (non-negative integer)
r	number of successes in the population ( $r \geq 0$ )
n	number of draws ( $n \geq 0$ )
N	population size ( $N \geq r$ )
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Hypergeometric distribution with r = 5, n = 10, N = 20
hypergeometric_pdf(3, 5, 10, 20)
hypergeometric_lpdf(3, 5, 10, 20)
hypergeometric_cdf(3, 5, 10, 20)
hypergeometric_lcdf(3, 5, 10, 20)
hypergeometric_quantile(0.5, 5, 10, 20)
```

---

hypergeometric\_functions

*Hypergeometric Functions*

---

**Description**

Functions to compute various hypergeometric functions.

**Usage**

```
hypergeometric_1F0(a, z)
hypergeometric_0F1(b, z)
hypergeometric_2F0(a1, a2, z)
hypergeometric_1F1(a, b, z)
hypergeometric_1F1_regularized(a, b, z)
log_hypergeometric_1F1(a, b, z)
hypergeometric_pFq(a, b, z)
```

**Arguments**

a	Parameter of the hypergeometric function
z	Argument of the hypergeometric function
b	Second parameter of the hypergeometric function
a1	First parameter of the hypergeometric function
a2	Second parameter of the hypergeometric function

**Value**

A single numeric value with the computed hypergeometric function.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Hypergeometric Function 1F0
hypergeometric_1F0(2, 0.2)
# Hypergeometric Function 0F1
hypergeometric_0F1(1, 0.8)
# Hypergeometric Function 2F0
hypergeometric_2F0(0.1, -1, 0.1)
# Hypergeometric Function 1F1
hypergeometric_1F1(2, 3, 1)
# Regularised Hypergeometric Function 1F1
hypergeometric_1F1_regularized(2, 3, 1)
# Logarithm of the Hypergeometric Function 1F1
log_hypergeometric_1F1(2, 3, 1)
# Hypergeometric Function pFq
hypergeometric_pFq(c(2, 3), c(4, 5), 6)
```

---

inverse\_chi\_squared\_distribution

*Inverse Chi-Squared Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Inverse Chi-Squared distribution.

**Usage**

```
inverse_chi_squared_pdf(x, df, scale = 1)

inverse_chi_squared_lpdf(x, df, scale = 1)

inverse_chi_squared_cdf(x, df, scale = 1)

inverse_chi_squared_lcdf(x, df, scale = 1)

inverse_chi_squared_quantile(p, df, scale = 1)
```

**Arguments**

x	quantile
df	degrees of freedom ( $df > 0$ )
scale	scale parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Inverse Chi-Squared distribution with 3 degrees of freedom, scale = 1
inverse_chi_squared_pdf(2, 3, 1)
inverse_chi_squared_lpdf(2, 3, 1)
inverse_chi_squared_cdf(2, 3, 1)
inverse_chi_squared_lcdf(2, 3, 1)
inverse_chi_squared_quantile(0.5, 3, 1)
```

---

inverse\_gamma\_distribution

*Inverse Gamma Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Inverse Gamma distribution.

**Usage**

```
inverse_gamma_pdf(x, shape, scale)

inverse_gamma_lpdf(x, shape, scale)

inverse_gamma_cdf(x, shape, scale)

inverse_gamma_lcdf(x, shape, scale)

inverse_gamma_quantile(p, shape, scale)
```

**Arguments**

x	quantile
shape	shape parameter (shape > 0)
scale	scale parameter (scale > 0)
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Inverse Gamma distribution with shape = 3, scale = 4
inverse_gamma_pdf(2, 3, 4)
inverse_gamma_lpdf(2, 3, 4)
inverse_gamma_cdf(2, 3, 4)
inverse_gamma_lcdf(2, 3, 4)
inverse_gamma_quantile(0.5, 3, 4)
```

---

inverse\_gaussian\_distribution

*Inverse Gaussian Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Inverse Gaussian distribution.

**Usage**

```
inverse_gaussian_pdf(x, mu, lambda)

inverse_gaussian_lpdf(x, mu, lambda)

inverse_gaussian_cdf(x, mu, lambda)

inverse_gaussian_lcdf(x, mu, lambda)

inverse_gaussian_quantile(p, mu, lambda)
```

**Arguments**

x	quantile
mu	mean parameter ( $\mu > 0$ )
lambda	scale (precision) parameter ( $\lambda > 0$ )
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Inverse Gaussian distribution with mu = 3, lambda = 4
inverse_gaussian_pdf(2, 3, 4)
inverse_gaussian_lpdf(2, 3, 4)
inverse_gaussian_cdf(2, 3, 4)
inverse_gaussian_lcdf(2, 3, 4)
inverse_gaussian_quantile(0.5, 3, 4)
```

---

inverse\_hyperbolic\_functions

*Inverse Hyperbolic Functions*

---

**Description**

Functions to compute the inverse hyperbolic functions: acosh, asinh, and atanh.

**Usage**`acosh_boost(x)``asinh_boost(x)``atanh_boost(x)`**Arguments**

x	Input numeric value
---	---------------------

**Value**

A single numeric value with the computed inverse hyperbolic function.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Inverse Hyperbolic Cosine
acosh_boost(2)
# Inverse Hyperbolic Sine
asinh_boost(1)
# Inverse Hyperbolic Tangent
atanh_boost(0.5)
```

---

`jacobi_elliptic_functions`*Jacobi Elliptic Functions*

---

**Description**

Functions to compute the Jacobi elliptic functions: sn, cn, dn, and others.

**Usage**`jacobi_elliptic(k, u)``jacobi_cd(k, u)``jacobi_cn(k, u)``jacobi_cs(k, u)``jacobi_dc(k, u)`

`jacobi_dn(k, u)`

`jacobi_ds(k, u)`

`jacobi_nc(k, u)`

`jacobi_nd(k, u)`

`jacobi_ns(k, u)`

`jacobi_sc(k, u)`

`jacobi_sd(k, u)`

`jacobi_sn(k, u)`

### Arguments

<code>k</code>	Elliptic modulus ( $0 \leq k < 1$ )
<code>u</code>	Argument of the elliptic functions

### Value

For `jacobi_elliptic`, a list containing the values of the Jacobi elliptic functions: `sn`, `cn`, `dn`. For individual functions, a single numeric value is returned.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Jacobi Elliptic Functions
k <- 0.5
u <- 2
jacobi_elliptic(k, u)
# Individual Jacobi Elliptic Functions
jacobi_cd(k, u)
jacobi_cn(k, u)
jacobi_cs(k, u)
jacobi_dc(k, u)
jacobi_dn(k, u)
jacobi_ds(k, u)
jacobi_nc(k, u)
jacobi_nd(k, u)
jacobi_ns(k, u)
jacobi_sc(k, u)
jacobi_sd(k, u)
jacobi_sn(k, u)
```

---

jacobi_polynomials	<i>Jacobi Polynomials and Related Functions</i>
--------------------	---

---

**Description**

Functions to compute Jacobi polynomials, their derivatives, and related functions.

**Usage**

```
jacobi(n, alpha, beta, x)

jacobi_prime(n, alpha, beta, x)

jacobi_double_prime(n, alpha, beta, x)

jacobi_derivative(n, alpha, beta, x, k)
```

**Arguments**

n	Degree of the polynomial
alpha	First parameter of the polynomial
beta	Second parameter of the polynomial
x	Argument of the polynomial
k	Order of the derivative

**Value**

A single numeric value with the computed Jacobi polynomial, its derivative, or k-th derivative.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Jacobi polynomial  $P_2^{(1, 2)}(0.5)$ 
jacobi(2, 1, 2, 0.5)
# Derivative of the Jacobi polynomial  $P_2^{(1, 2)'}(0.5)$ 
jacobi_prime(2, 1, 2, 0.5)
# Second derivative of the Jacobi polynomial  $P_2^{(1, 2)''}(0.5)$ 
jacobi_double_prime(2, 1, 2, 0.5)
# 3rd derivative of the Jacobi polynomial  $P_2^{(1, 2)^{(k)}}(0.5)$ 
jacobi_derivative(2, 1, 2, 0.5, 3)
```

---

 jacobi\_theta\_functions

*Jacobi Theta Functions*

---

## Description

Functions to compute the Jacobi theta functions  $(\theta_1, \theta_2, \theta_3, \theta_4)$  parameterised by either  $(q)$  or  $(\tau)$ .

## Usage

`jacobi_theta1(x, q)`

`jacobi_theta1tau(x, tau)`

`jacobi_theta2(x, q)`

`jacobi_theta2tau(x, tau)`

`jacobi_theta3(x, q)`

`jacobi_theta3tau(x, tau)`

`jacobi_theta3m1(x, q)`

`jacobi_theta3m1tau(x, tau)`

`jacobi_theta4(x, q)`

`jacobi_theta4tau(x, tau)`

`jacobi_theta4m1(x, q)`

`jacobi_theta4m1tau(x, tau)`

## Arguments

<code>x</code>	Input value
<code>q</code>	The nome parameter of the Jacobi theta function ( $0 < q < 1$ )
<code>tau</code>	The nome parameter of the Jacobi theta function ( $\tau = u + iv$ , where $u$ and $v$ are real numbers)

## Value

A single numeric value with the computed Jacobi theta function.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Jacobi Theta Functions
x <- 0.5
q <- 0.9
tau <- 1.5
jacobi_theta1(x, q)
jacobi_theta1tau(x, tau)
jacobi_theta2(x, q)
jacobi_theta2tau(x, tau)
jacobi_theta3(x, q)
jacobi_theta3tau(x, tau)
jacobi_theta3m1(x, q)
jacobi_theta3m1tau(x, tau)
jacobi_theta4(x, q)
jacobi_theta4tau(x, tau)
jacobi_theta4m1(x, q)
jacobi_theta4m1tau(x, tau)
```

---

`kolmogorov_smirnov_distribution`

*Kolmogorov-Smirnov Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Kolmogorov-Smirnov distribution.

**Usage**

```
kolmogorov_smirnov_pdf(x, n)
kolmogorov_smirnov_lpdf(x, n)
kolmogorov_smirnov_cdf(x, n)
kolmogorov_smirnov_lcdf(x, n)
kolmogorov_smirnov_quantile(p, n)
```

**Arguments**

x	quantile
n	sample size ( $n > 0$ )
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Kolmogorov-Smirnov distribution with sample size n = 10
kolmogorov_smirnov_pdf(0.5, 10)
kolmogorov_smirnov_lpdf(0.5, 10)
kolmogorov_smirnov_cdf(0.5, 10)
kolmogorov_smirnov_lcdf(0.5, 10)
kolmogorov_smirnov_quantile(0.5, 10)
```

---

laguerre\_polynomials    *Laguerre Polynomials and Related Functions*

---

**Description**

Functions to compute Laguerre polynomials of the first kind.

**Usage**

```
laguerre(n, x)

laguerre_m(n, m, x)

laguerre_next(n, x, Ln, Lnm1)

laguerre_next_m(n, m, x, Ln, Lnm1)
```

**Arguments**

n	Degree of the polynomial
x	Argument of the polynomial
m	Order of the polynomial (for Laguerre polynomials of the first kind)
Ln	Value of the Laguerre polynomial ( $L_n(x)$ )
Lnm1	Value of the Laguerre polynomial ( $L_{n-1}(x)$ )

**Value**

A single numeric value with the computed Laguerre polynomial, its derivative, or related functions.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Laguerre polynomial of the first kind L_2(0.5)
laguerre(2, 0.5)
# Laguerre polynomial of the first kind with order 1 L_2^1(0.5)
laguerre_m(2, 1, 0.5)
# Next Laguerre polynomial of the first kind L_3(0.5) using L_2(0.5) and L_1(0.5)
laguerre_next(2, 0.5, laguerre(2, 0.5), laguerre(1, 0.5))
# Next Laguerre polynomial of the first kind with order 1 L_3^1(0.5) using L_2^1(0.5) and L_1^1(0.5)
laguerre_next_m(2, 1, 0.5, laguerre_m(2, 1, 0.5), laguerre_m(1, 1, 0.5))
```

---

lambert_w_function	<i>Lambert W Function and Its Derivatives</i>
--------------------	---

---

**Description**

Functions to compute the Lambert W function and its derivatives for the principal branch ( $W_0$ ) and the branch -1 ( $W_{-1}$ ).

**Usage**

```
lambert_w0(z)

lambert_wm1(z)

lambert_w0_prime(z)

lambert_wm1_prime(z)
```

**Arguments**

<code>z</code>	Argument of the Lambert W function
----------------	------------------------------------

**Value**

A single numeric value with the computed Lambert W function or its derivative.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Lambert W Function (Principal Branch)
lambert_w0(0.3)
# Lambert W Function (Branch -1)
lambert_wm1(-0.3)
# Derivative of the Lambert W Function (Principal Branch)
lambert_w0_prime(0.3)
# Derivative of the Lambert W Function (Branch -1)
lambert_wm1_prime(-0.3)
```

---

landau_distribution	<i>Landau Distribution Functions</i>
---------------------	--------------------------------------

---

### Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Landau distribution.

### Usage

```
landau_pdf(x, location = 0, scale = 1)

landau_lpdf(x, location = 0, scale = 1)

landau_cdf(x, location = 0, scale = 1)

landau_lcdf(x, location = 0, scale = 1)

landau_quantile(p, location = 0, scale = 1)
```

### Arguments

x	quantile
location	location parameter (default is 0)
scale	scale parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

### Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Distribution only available with Boost version 1.87.0 or later.
## Not run:
# Landau distribution with location 0 and scale 1
  landau_pdf(3)
  landau_lpdf(3)
  landau_cdf(3)
  landau_lcdf(3)
  landau_quantile(0.5)

## End(Not run)
```

---

**laplace\_distribution**    *Laplace Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Laplace distribution.

**Usage**

```
laplace_pdf(x, location = 0, scale = 1)
laplace_lpdf(x, location = 0, scale = 1)
laplace_cdf(x, location = 0, scale = 1)
laplace_lcdf(x, location = 0, scale = 1)
laplace_quantile(p, location = 0, scale = 1)
```

**Arguments**

x	quantile
location	location parameter (default is 0)
scale	scale parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Laplace distribution with location = 0, scale = 1
laplace_pdf(0)
laplace_lpdf(0)
laplace_cdf(0)
laplace_lcdf(0)
laplace_quantile(0.5)
```

---

legendre\_polynomials    *Legendre Polynomials and Related Functions*

---

**Description**

Functions to compute Legendre polynomials of the first and second kind, their derivatives, zeros, and related functions.

**Usage**

```

legendre_p(n, x)

legendre_p_prime(n, x)

legendre_p_zeros(n)

legendre_p_m(n, m, x)

legendre_q(n, x)

legendre_next(n, x, Pl, Plm1)

legendre_next_m(n, m, x, Pl, Plm1)

```

**Arguments**

n	Degree of the polynomial
x	Argument of the polynomial
m	Order of the polynomial (for Legendre polynomials of the first kind)
Pl	Value of the Legendre polynomial ( $P_l(x)$ )
Plm1	Value of the Legendre polynomial ( $P_{l-1}(x)$ )

**Value**

A single numeric value with the computed Legendre polynomial, its derivative, zeros, or related functions.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```

# Legendre polynomial of the first kind P_2(0.5)
legendre_p(2, 0.5)
# Derivative of the Legendre polynomial of the first kind P_2'(0.5)
legendre_p_prime(2, 0.5)

```

```

# Zeros of the Legendre polynomial of the first kind P_2
legendre_p_zeros(2)
# Legendre polynomial of the first kind with order 1 P_2^1(0.5)
legendre_p_m(2, 1, 0.5)
# Legendre polynomial of the second kind Q_2(0.5)
legendre_q(2, 0.5)
# Next Legendre polynomial of the first kind P_3(0.5) using P_2(0.5) and P_1(0.5)
legendre_next(2, 0.5, legendre_p(2, 0.5), legendre_p(1, 0.5))
# Next Legendre polynomial of the first kind with order 1 P_3^1(0.5) using P_2^1(0.5) and P_1^1(0.5)
legendre_next_m(2, 1, 0.5, legendre_p_m(2, 1, 0.5), legendre_p_m(1, 1, 0.5))

```

---

logistic\_distribution *Logistic Distribution Functions*

---

## Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Logistic distribution.

## Usage

```

logistic_pdf(x, location = 0, scale = 1)

logistic_lpdf(x, location = 0, scale = 1)

logistic_cdf(x, location = 0, scale = 1)

logistic_lcdf(x, location = 0, scale = 1)

logistic_quantile(p, location = 0, scale = 1)

```

## Arguments

x	quantile
location	location parameter (default is 0)
scale	scale parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

## Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Logistic distribution with location = 0, scale = 1
logistic_pdf(0)
logistic_lpdf(0)
logistic_cdf(0)
logistic_lcdf(0)
logistic_quantile(0.5)
```

---

lognormal\_distribution

*Log Normal Distribution Functions*

---

### Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Log Normal distribution.

### Usage

```
lognormal_pdf(x, location = 0, scale = 1)

lognormal_lpdf(x, location = 0, scale = 1)

lognormal_cdf(x, location = 0, scale = 1)

lognormal_lcdf(x, location = 0, scale = 1)

lognormal_quantile(p, location = 0, scale = 1)
```

### Arguments

x	quantile
location	location parameter (default is 0)
scale	scale parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

### Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Log Normal distribution with location = 0, scale = 1
lognormal_pdf(0)
lognormal_lpdf(0)
lognormal_cdf(0)
lognormal_lcdf(0)
lognormal_quantile(0.5)
```

---

mapairy\_distribution    *Map-Airy Distribution Functions*

---

### Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Map-Airy distribution.

### Usage

```
mapairy_pdf(x, location = 0, scale = 1)
mapairy_lpdf(x, location = 0, scale = 1)
mapairy_cdf(x, location = 0, scale = 1)
mapairy_lcdf(x, location = 0, scale = 1)
mapairy_quantile(p, location = 0, scale = 1)
```

### Arguments

x	quantile
location	location parameter (default is 0)
scale	scale parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

### Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Distribution only available with Boost version 1.87.0 or later.
## Not run:
# Map-Airy distribution with location 0 and scale 1
mapairy_pdf(3)
mapairy_lpdf(3)
mapairy_cdf(3)
mapairy_lcdf(3)
mapairy_quantile(0.5)

## End(Not run)
```

---

negative\_binomial\_distribution

*Negative Binomial Distribution Functions*

---

### Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Negative Binomial distribution.

### Usage

```
negative_binomial_pdf(x, successes, success_fraction)

negative_binomial_lpdf(x, successes, success_fraction)

negative_binomial_cdf(x, successes, success_fraction)

negative_binomial_lcdf(x, successes, success_fraction)

negative_binomial_quantile(p, successes, success_fraction)
```

### Arguments

x	quantile
successes	number of successes (successes $\geq 0$ )
success_fraction	probability of success on each trial ( $0 \leq \text{success\_fraction} \leq 1$ )
p	probability ( $0 \leq p \leq 1$ )

### Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
negative_binomial_pdf(3, 5, 0.5)
negative_binomial_lpdf(3, 5, 0.5)
negative_binomial_cdf(3, 5, 0.5)
negative_binomial_lcdf(3, 5, 0.5)
negative_binomial_quantile(0.5, 5, 0.5)
```

---

non\_central\_beta\_distribution

*Noncentral Beta Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Noncentral Beta distribution.

**Usage**

```
non_central_beta_pdf(x, alpha, beta, lambda)

non_central_beta_lpdf(x, alpha, beta, lambda)

non_central_beta_cdf(x, alpha, beta, lambda)

non_central_beta_lcdf(x, alpha, beta, lambda)

non_central_beta_quantile(p, alpha, beta, lambda)
```

**Arguments**

x	quantile ( $0 \leq x \leq 1$ )
alpha	first shape parameter ( $\alpha > 0$ )
beta	second shape parameter ( $\beta > 0$ )
lambda	noncentrality parameter ( $\lambda \geq 0$ )
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Noncentral Beta distribution with shape parameters alpha = 2, beta = 3
# and noncentrality parameter lambda = 1
non_central_beta_pdf(0.5, 2, 3, 1)
non_central_beta_lpdf(0.5, 2, 3, 1)
non_central_beta_cdf(0.5, 2, 3, 1)
non_central_beta_lcdf(0.5, 2, 3, 1)
non_central_beta_quantile(0.5, 2, 3, 1)
```

---

non\_central\_chi\_squared\_distribution

*Noncentral Chi-Squared Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Noncentral Chi-Squared distribution.

**Usage**

```
non_central_chi_squared_pdf(x, df, lambda)

non_central_chi_squared_lpdf(x, df, lambda)

non_central_chi_squared_cdf(x, df, lambda)

non_central_chi_squared_lcdf(x, df, lambda)

non_central_chi_squared_quantile(p, df, lambda)
```

**Arguments**

x	quantile
df	degrees of freedom ( $df > 0$ )
lambda	noncentrality parameter ( $lambda \geq 0$ )
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
## Not run:
# Noncentral Chi-Squared distribution with 3 degrees of freedom and noncentrality
# parameter 1
non_central_chi_squared_pdf(2, 3, 1)
non_central_chi_squared_lpdf(2, 3, 1)
non_central_chi_squared_cdf(2, 3, 1)
non_central_chi_squared_lcdf(2, 3, 1)
non_central_chi_squared_quantile(0.5, 3, 1)

## End(Not run)
```

---

non\_central\_t\_distribution

*Noncentral T Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Noncentral T distribution.

**Usage**

```
non_central_t_pdf(x, df, delta)

non_central_t_lpdf(x, df, delta)

non_central_t_cdf(x, df, delta)

non_central_t_lcdf(x, df, delta)

non_central_t_quantile(p, df, delta)
```

**Arguments**

x	quantile
df	degrees of freedom ( $df > 0$ )
delta	noncentrality parameter ( $delta \geq 0$ )
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Noncentral T distribution with 3 degrees of freedom and noncentrality parameter 1
non_central_t_pdf(0, 3, 1)
non_central_t_lpdf(0, 3, 1)
non_central_t_cdf(0, 3, 1)
non_central_t_lcdf(0, 3, 1)
non_central_t_quantile(0.5, 3, 1)
```

---

normal_distribution	<i>Normal Distribution Functions</i>
---------------------	--------------------------------------

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Normal distribution.

**Usage**

```
normal_pdf(x, mean = 0, sd = 1)

normal_lpdf(x, mean = 0, sd = 1)

normal_cdf(x, mean = 0, sd = 1)

normal_lcdf(x, mean = 0, sd = 1)

normal_quantile(p, mean = 0, sd = 1)
```

**Arguments**

x	quantile
mean	mean parameter (default is 0)
sd	standard deviation parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Normal distribution with mean = 0, sd = 1
normal_pdf(0)
normal_lpdf(0)
normal_cdf(0)
normal_lcdf(0)
normal_quantile(0.5)
```

---

number_series	<i>Number Series</i>
---------------	----------------------

---

**Description**

Functions to compute Bernoulli numbers, tangent numbers, fibonacci numbers, and prime numbers.

**Usage**

```
bernoulli_b2n(n = NULL, start_index = NULL, number_of_bernoullis_b2n = NULL)

max_bernoulli_b2n()

unchecked_bernoulli_b2n(n)

tangent_t2n(n = NULL, start_index = NULL, number_of_tangent_t2n = NULL)

prime(n)

max_prime()

fibonacci(n)

unchecked_fibonacci(n)
```

**Arguments**

n	Index of number to compute (must be a non-negative integer)
start_index	The starting index for the range of numbers (must be a non-negative integer)
number_of_bernoullis_b2n	The number of Bernoulli numbers to compute
number_of_tangent_t2n	The number of tangent numbers to compute

### Details

Efficient computation of Bernoulli numbers, tangent numbers, fibonacci numbers, and prime numbers.

The `checked_` functions ensure that the input is within valid bounds, while the `unchecked_` functions do not perform such checks, allowing for potentially faster computation at the risk of overflow or invalid input.

The `range_` functions allow for computing a sequence of numbers starting from a specified index.

The `max_` functions return the maximum index for which the respective numbers can be computed using precomputed lookup tables.

### Value

A single numeric value for the Bernoulli numbers, tangent numbers, fibonacci numbers, or prime numbers, or a vector of values for ranges.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
bernoulli_b2n(10)
max_bernoulli_b2n()
unchecked_bernoulli_b2n(10)
bernoulli_b2n(start_index = 0, number_of_bernoullis_b2n = 10)
tangent_t2n(10)
tangent_t2n(start_index = 0, number_of_tangent_t2n = 10)
prime(10)
max_prime()
fibonacci(10)
unchecked_fibonacci(10)
```

---

numerical\_differentiation

*Numerical Differentiation*

---

### Description

Functions for numerical differentiation using finite difference methods and complex step methods.

### Usage

```
finite_difference_derivative(f, x, order = 1)
```

```
complex_step_derivative(f, x)
```

**Arguments**

f	A function to differentiate. It should accept a single numeric value and return a single numeric value.
x	The point at which to evaluate the derivative.
order	The order of accuracy of the derivative to compute. Default is 1.

**Value**

The approximate value of the derivative at the point x.

**Examples**

```
# Finite difference derivative of sin(x) at pi/4
finite_difference_derivative(sin, pi / 4)
# Complex step derivative of exp(x) at 1.7
complex_step_derivative(exp, 1.7)
```

---

numerical\_integration *Numerical Integration*

---

**Description**

Functions for numerical integration using various methods such as trapezoidal rule, Gauss-Legendre quadrature, and Gauss-Kronrod quadrature.

**Usage**

```
trapezoidal(f, a, b, tol = sqrt(.Machine$double.eps), max_refinements = 12)

gauss_legendre(f, a, b, points = 7)

gauss_kronrod(
  f,
  a,
  b,
  points = 15,
  max_depth = 15,
  tol = sqrt(.Machine$double.eps)
)
```

**Arguments**

f	A function to integrate. It should accept a single numeric value and return a single numeric value.
a	The lower limit of integration.
b	The upper limit of integration.

tol	The tolerance for the approximation. Default is <code>sqrt(.Machine\$double.eps)</code> .
max_refinements	The maximum number of refinements to apply. Default is 12.
points	The number of evaluation points to use in the Gauss-Legendre or Gauss-Kronrod quadrature.
max_depth	Sets the maximum number of interval splittings for Gauss-Kronrod permitted before stopping. Set this to zero for non-adaptive quadrature.

**Value**

A single numeric value with the computed integral.

**Examples**

```
# Trapezoidal rule integration of sin(x) from 0 to pi
trapezoidal(sin, 0, pi)
# Gauss-Legendre integration of exp(x) from 0 to 1
gauss_legendre(exp, 0, 1, points = 7)
# Adaptive Gauss-Kronrod integration of log(x) from 1 to 2
gauss_kronrod(log, 1, 2, points = 15, max_depth = 10)
```

---

ooura\_fourier\_integrals

*Ooura Fourier Integrals*

---

**Description**

Computing Fourier sine and cosine integrals using Ooura's method.

**Usage**

```
ooura_fourier_sin(
  f,
  omega = 1,
  relative_error_tolerance = sqrt(.Machine$double.eps),
  levels = 8
)

ooura_fourier_cos(
  f,
  omega = 1,
  relative_error_tolerance = sqrt(.Machine$double.eps),
  levels = 8
)
```

**Arguments**

f	A function to integrate. It should accept a single numeric value and return a single numeric value.
omega	The frequency parameter for the sine integral.
relative_error_tolerance	The relative error tolerance for the approximation.
levels	The number of levels of refinement to apply. Default is 8.

**Value**

A single numeric value with the computed Fourier sine or cosine integral, with attribute 'relative\_error' indicating the relative error of the approximation.

**Examples**

```
# Fourier sine integral of sin(x) with omega = 1
oura_fourier_sin(function(x) { 1 / x }, omega = 1)
# Fourier cosine integral of cos(x) with omega = 1
oura_fourier_cos(function(x) { 1 / (x * x + 1) }, omega = 1)
```

owens\_t

*Owens T Function***Description**

Computes the Owens T function of h and a, giving the probability of the event ( $X > h$  and  $0 < Y < a * X$ ) where X and Y are independent standard normal random variables.

**Usage**

```
owens_t(h, a)
```

**Arguments**

h	The first argument of the Owens T function
a	The second argument of the Owens T function

**Value**

The value of the Owens T function at (h, a).

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Owens T Function
owens_t(1, 0.5)
```

---

pareto\_distribution     *Pareto Distribution Functions*

---

### Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Pareto distribution.

### Usage

```
pareto_pdf(x, shape = 1, scale = 1)

pareto_lpdf(x, shape = 1, scale = 1)

pareto_cdf(x, shape = 1, scale = 1)

pareto_lcdf(x, shape = 1, scale = 1)

pareto_quantile(p, shape = 1, scale = 1)
```

### Arguments

x	quantile
shape	shape parameter (default is 1)
scale	scale parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

### Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Pareto distribution with shape = 1, scale = 1
pareto_pdf(1)
pareto_lpdf(1)
pareto_cdf(1)
pareto_lcdf(1)
pareto_quantile(0.5)
```

---

poisson\_distribution    *Poisson Distribution Functions*

---

### Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Poisson distribution.

### Usage

```
poisson_pdf(x, lambda = 1)
poisson_lpdf(x, lambda = 1)
poisson_cdf(x, lambda = 1)
poisson_lcdf(x, lambda = 1)
poisson_quantile(p, lambda = 1)
```

### Arguments

x	quantile
lambda	rate parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

### Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

### Examples

```
# Poisson distribution with lambda = 1
poisson_pdf(0, 1)
poisson_lpdf(0, 1)
poisson_cdf(0, 1)
poisson_lcdf(0, 1)
poisson_quantile(0.5, 1)
```

---

polynomial\_root\_finding

*Polynomial Root-Finding*

---

## Description

Functions for finding roots of polynomials of various degrees.

## Usage

```
quadratic_roots(a, b, c)
```

```
cubic_roots(a, b, c, d)
```

```
cubic_root_residual(a, b, c, d, root)
```

```
cubic_root_condition_number(a, b, c, d, root)
```

```
quartic_roots(a, b, c, d, e)
```

## Arguments

a	Coefficient of the polynomial term (e.g., for quadratic $ax^2 + bx + c$ , a is the coefficient of $x^2$ ).
b	Coefficient of the linear term (e.g., for quadratic $ax^2 + bx + c$ , b is the coefficient of x).
c	Constant term (e.g., for quadratic $ax^2 + bx + c$ , c is the constant).
d	Coefficient of the cubic term (for cubic $ax^3 + bx^2 + cx + d$ , d is the constant).
root	The root to evaluate the residual or condition number at.
e	Coefficient of the quartic term (for quartic $ax^4 + bx^3 + cx^2 + dx + e$ , e is the constant).

## Details

This package provides functions to find roots of quadratic, cubic, and quartic polynomials. The functions return the roots as numeric vectors.

## Value

A numeric vector of the polynomial roots, residual, or condition number.

### Examples

```
# Example of finding quadratic roots
quadratic_roots(1, -3, 2)
# Example of finding cubic roots
cubic_roots(1, -6, 11, -6)
# Example of finding quartic roots
quartic_roots(1, -10, 35, -50, 24)
# Example of finding cubic root residual
cubic_root_residual(1, -6, 11, -6, 1)
# Example of finding cubic root condition number
cubic_root_condition_number(1, -6, 11, -6, 1)
```

---

rayleigh\_distribution *Rayleigh Distribution Functions*

---

### Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Rayleigh distribution.

### Usage

```
rayleigh_pdf(x, scale = 1)

rayleigh_lpdf(x, scale = 1)

rayleigh_cdf(x, scale = 1)

rayleigh_lcdf(x, scale = 1)

rayleigh_quantile(p, scale = 1)
```

### Arguments

x	quantile
scale	scale parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

### Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

### See Also

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Rayleigh distribution with scale = 1
rayleigh_pdf(1)
rayleigh_lpdf(1)
rayleigh_cdf(1)
rayleigh_lcdf(1)
rayleigh_quantile(0.5)
```

---

rootfinding\_and\_minimisation

*Root-Finding and Minimisation Functions*

---

**Description**

Functions for root-finding and minimisation using various algorithms.

**Usage**

```
bisect(
  f,
  lower,
  upper,
  digits = .Machine$double.digits,
  max_iter = .Machine$integer.max
)

bracket_and_solve_root(
  f,
  guess,
  factor,
  rising,
  digits = .Machine$double.digits,
  max_iter = .Machine$integer.max
)

toms748_solve(
  f,
  lower,
  upper,
  digits = .Machine$double.digits,
  max_iter = .Machine$integer.max
)

newton_raphson_iterate(
  f,
  guess,
  lower,
```

```

    upper,
    digits = .Machine$double.digits,
    max_iter = .Machine$integer.max
)

halley_iterate(
  f,
  guess,
  lower,
  upper,
  digits = .Machine$double.digits,
  max_iter = .Machine$integer.max
)

schroder_iterate(
  f,
  guess,
  lower,
  upper,
  digits = .Machine$double.digits,
  max_iter = .Machine$integer.max
)

brent_find_minima(
  f,
  lower,
  upper,
  digits = .Machine$double.digits,
  max_iter = .Machine$integer.max
)

```

### Arguments

<code>f</code>	A function to find the root of or to minimise. It should take and return a single numeric value for root-finding, or a numeric vector for minimisation.
<code>lower</code>	The lower bound of the interval to search for the root or minimum.
<code>upper</code>	The upper bound of the interval to search for the root or minimum.
<code>digits</code>	The number of significant digits to which the root or minimum should be found. Defaults to double precision.
<code>max_iter</code>	The maximum number of iterations to perform. Defaults to the maximum integer value.
<code>guess</code>	A numeric value that is a guess for the root or minimum.
<code>factor</code>	Size of steps to take when searching for the root.
<code>rising</code>	If TRUE, the function is assumed to be rising, otherwise it is assumed to be falling.

## Details

This package provides a set of functions for finding roots of equations and minimising functions using different numerical methods. The methods include bisection, bracket and solve, TOMS 748, Newton-Raphson, Halley's method, Schroder's method, and Brent's method. It also includes functions for finding roots of polynomials (quadratic, cubic, quartic) and computing minima.

## Value

A list containing the root or minimum value, the value of the function at that point, and the number of iterations performed.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

## Examples

```
f <- function(x) x^2 - 2
bisect(f, lower = 0, upper = 2)
bracket_and_solve_root(f, guess = 1, factor = 0.1, rising = TRUE)
toms748_solve(f, lower = 0, upper = 2)
f <- function(x) c(x^2 - 2, 2 * x)
newton_raphson_iterate(f, guess = 1, lower = 0, upper = 2)
f <- function(x) c(x^2 - 2, 2 * x, 2)
halley_iterate(f, guess = 1, lower = 0, upper = 2)
schroder_iterate(f, guess = 1, lower = 0, upper = 2)
f <- function(x) (x - 2)^2 + 1
brent_find_minima(f, lower = 0, upper = 4)
```

---

saspoint5\_distribution

*SαS Point5 Distribution Functions*

---

## Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the SαS Point5 distribution.

## Usage

```
saspoint5_pdf(x, location = 0, scale = 1)

saspoint5_lpdf(x, location = 0, scale = 1)

saspoint5_cdf(x, location = 0, scale = 1)

saspoint5_lcdf(x, location = 0, scale = 1)

saspoint5_quantile(p, location = 0, scale = 1)
```

**Arguments**

x	quantile
location	location parameter (default is 0)
scale	scale parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Distribution only available with Boost version 1.87.0 or later.
## Not run:
# SaS Point5 distribution with location 0 and scale 1
saspoint5_pdf(3)
saspoint5_lpdf(3)
saspoint5_cdf(3)
saspoint5_lcdf(3)
saspoint5_quantile(0.5)

## End(Not run)
```

---

sinus\_cardinal\_hyperbolic\_functions

*Sinus Cardinal and Hyperbolic Functions*

---

**Description**

Functions to compute the sinus cardinal function and hyperbolic sinus cardinal function.

**Usage**

```
sinc_pi(x)

sinhc_pi(x)
```

**Arguments**

x	Input value
---	-------------

**Value**

A single numeric value with the computed sinus cardinal or hyperbolic sinus cardinal function.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Sinus cardinal function
sinc_pi(0.5)
# Hyperbolic sinus cardinal function
sinhc_pi(0.5)
```

---

skew\_normal\_distribution

*Skew Normal Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Skew Normal distribution.

**Usage**

```
skew_normal_pdf(x, location = 0, scale = 1, shape = 0)
skew_normal_lpdf(x, location = 0, scale = 1, shape = 0)
skew_normal_cdf(x, location = 0, scale = 1, shape = 0)
skew_normal_lcdf(x, location = 0, scale = 1, shape = 0)
skew_normal_quantile(p, location = 0, scale = 1, shape = 0)
```

**Arguments**

x	quantile
location	location parameter (default is 0)
scale	scale parameter (default is 1)
shape	shape parameter (default is 0)
p	probability (0 <= p <= 1)

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Skew Normal distribution with location = 0, scale = 1, shape = 0
skew_normal_pdf(0)
skew_normal_lpdf(0)
skew_normal_cdf(0)
skew_normal_lcdf(0)
skew_normal_quantile(0.5)
```

---

spherical_harmonics	<i>Spherical Harmonics</i>
---------------------	----------------------------

---

**Description**

Functions to compute spherical harmonics and related functions.

**Usage**

```
spherical_harmonic(n, m, theta, phi)

spherical_harmonic_r(n, m, theta, phi)

spherical_harmonic_i(n, m, theta, phi)
```

**Arguments**

n	Degree of the spherical harmonic
m	Order of the spherical harmonic
theta	Polar angle (colatitude)
phi	Azimuthal angle (longitude)

**Value**

A single complex value with the computed spherical harmonic function, or its real and imaginary parts.

**See Also**

[Boost Documentation](#)

## Examples

```
# Spherical harmonic function  $Y_2^1(0.5, 0.5)$ 
spherical_harmonic(2, 1, 0.5, 0.5)
# Real part of the spherical harmonic function  $Y_2^1(0.5, 0.5)$ 
spherical_harmonic_r(2, 1, 0.5, 0.5)
# Imaginary part of the spherical harmonic function  $Y_2^1(0.5, 0.5)$ 
spherical_harmonic_i(2, 1, 0.5, 0.5)
```

---

students\_t\_distribution

*Student's T Distribution Functions*

---

## Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Student's t distribution.

## Usage

```
students_t_pdf(x, df = 1)
students_t_lpdf(x, df = 1)
students_t_cdf(x, df = 1)
students_t_lcdf(x, df = 1)
students_t_quantile(p, df = 1)
```

## Arguments

x	quantile
df	degrees of freedom (default is 1)
p	probability ( $0 \leq p \leq 1$ )

## Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

## Examples

```
# Student's t distribution with 3 degrees of freedom
students_t_pdf(0, 3)
students_t_lpdf(0, 3)
students_t_cdf(0, 3)
students_t_lcdf(0, 3)
students_t_quantile(0.5, 3)
```

---

triangular\_distribution

*Triangular Distribution Functions*

---

## Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Triangular distribution.

## Usage

```
triangular_pdf(x, lower = 0, mode = 1, upper = 2)

triangular_lpdf(x, lower = 0, mode = 1, upper = 2)

triangular_cdf(x, lower = 0, mode = 1, upper = 2)

triangular_lcdf(x, lower = 0, mode = 1, upper = 2)

triangular_quantile(p, lower = 0, mode = 1, upper = 2)
```

## Arguments

x	quantile
lower	lower limit of the distribution (default is 0)
mode	mode of the distribution (default is 1)
upper	upper limit of the distribution (default is 2)
p	probability ( $0 \leq p \leq 1$ )

## Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

## Examples

```
# Triangular distribution with lower = 0, mode = 1, upper = 2
triangular_pdf(1)
triangular_lpdf(1)
triangular_cdf(1)
triangular_lcdf(1)
triangular_quantile(0.5)
```

---

uniform\_distribution    *Uniform Distribution Functions*

---

## Description

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Uniform distribution.

## Usage

```
uniform_pdf(x, lower = 0, upper = 1)

uniform_lpdf(x, lower = 0, upper = 1)

uniform_cdf(x, lower = 0, upper = 1)

uniform_lcdf(x, lower = 0, upper = 1)

uniform_quantile(p, lower = 0, upper = 1)
```

## Arguments

x	quantile
lower	lower bound of the distribution (default is 0)
upper	upper bound of the distribution (default is 1)
p	probability ( $0 \leq p \leq 1$ )

## Value

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

## See Also

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Uniform distribution with lower = 0, upper = 1
uniform_pdf(0.5)
uniform_lpdf(0.5)
uniform_cdf(0.5)
uniform_lcdf(0.5)
uniform_quantile(0.5)
```

---

vector_functionals	<i>Vector Functionals</i>
--------------------	---------------------------

---

**Description**

Functions to compute various vector norms and distances.

**Usage**

```
l0_pseudo_norm(x)

hamming_distance(x, y)

l1_norm(x)

l1_distance(x, y)

l2_norm(x)

l2_distance(x, y)

sup_norm(x)

sup_distance(x, y)

lp_norm(x, p)

lp_distance(x, y, p)

total_variation(x)
```

**Arguments**

x	A numeric vector.
y	A numeric vector of the same length as x (for distance functions).
p	A positive integer indicating the order of the norm or distance (for Lp functions).

**Value**

A single numeric value with the computed norm or distance.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# L0 Pseudo Norm
l0_pseudo_norm(c(1, 0, 2, 0, 3))
# Hamming Distance
hamming_distance(c(1, 0, 1), c(0, 1, 1))
# L1 Norm
l1_norm(c(1, -2, 3))
# L1 Distance
l1_distance(c(1, -2, 3), c(4, -5, 6))
# L2 Norm
l2_norm(c(3, 4))
# L2 Distance
l2_distance(c(3, 4), c(0, 0))
# Supremum Norm
sup_norm(c(1, -2, 3))
# Supremum Distance
sup_distance(c(1, -2, 3), c(4, -5, 6))
# Lp Norm
lp_norm(c(1, -2, 3), 3)
# Lp Distance
lp_distance(c(1, -2, 3), c(4, -5, 6), 3)
# Total Variation
total_variation(c(1, 2, 1, 3))
```

---

weibull\_distribution    *Weibull Distribution Functions*

---

**Description**

Functions to compute the probability density function, cumulative distribution function, and quantile function for the Weibull distribution.

**Usage**

```
weibull_pdf(x, shape = 1, scale = 1)

weibull_lpdf(x, shape = 1, scale = 1)

weibull_cdf(x, shape = 1, scale = 1)

weibull_lcdf(x, shape = 1, scale = 1)

weibull_quantile(p, shape = 1, scale = 1)
```

**Arguments**

x	quantile
shape	shape parameter (default is 1)
scale	scale parameter (default is 1)
p	probability ( $0 \leq p \leq 1$ )

**Value**

A single numeric value with the computed probability density, log-probability density, cumulative distribution, log-cumulative distribution, or quantile depending on the function called.

**See Also**

[Boost Documentation](#) for more details on the mathematical background.

**Examples**

```
# Weibull distribution with shape = 1, scale = 1
weibull_pdf(1)
weibull_lpdf(1)
weibull_cdf(1)
weibull_lcdf(1)
weibull_quantile(0.5)
```

---

zeta

*Riemann Zeta Function*

---

**Description**

Computes the Riemann zeta function ( $\zeta(s)$ ) for argument ( $z$ ).

**Usage**

```
zeta(z)
```

**Arguments**

z	Real number input
---	-------------------

**Value**

The value of the Riemann zeta function ( $\zeta(z)$ ).

**Examples**

```
# Riemann Zeta Function
zeta(2) # Should return pi^2 / 6
```
