

Package ‘rvolleydata’

September 2, 2025

Title Extract Data from Professional Volleyball Leagues in North America

Version 1.0.0

Description

Gather boxscore, play-by-play, and auxiliary data from Major League Volleyball (MLV) <<https://provolleyball.com>>, League One Volleyball Pro (LOVB Pro) <<https://www.lovb.com/pro-league>>, and Athletes Unlimited Pro Volleyball <<https://auproports.com/volleyball/>> to create a repository of basic and advanced statistics for teams and players.

License MIT + file LICENSE

Encoding UTF-8

RoxygenNote 7.3.2

URL <https://github.com/awosoga/rvolleydata>,
<https://awosoga.github.io/rvolleydata/>

BugReports <https://github.com/awosoga/rvolleydata/issues>

Depends R (>= 4.1.0)

Imports dplyr, lubridate, readr, tibble

Suggests knitr, rmarkdown

VignetteBuilder knitr

NeedsCompilation no

load_aupvb_leaderboards
<i>Load cleaned aupvb leaderboards data from the volleydata repository</i>

Description

Load cleaned aupvb leaderboards data from the volleydata repository

Usage

load_aupvb_leaderboards(seasons = NULL)

Arguments

seasons	An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.
---------	---

Value

Returns a data frame containing leaderboards for the specified seasons.

Column Name	Type
season	dbl
week_number	dbl
game_number	dbl
game_rank	dbl
first_name	chr
last_name	chr

uniform_number	dbl

Examples

```
try({load_aupvb_leaderboards(2024)})
```

load_aupvb_pbp	<i>Load cleaned aupvb pbp data from the volleydata repository.</i>
----------------	--

Description

Load cleaned aupvb pbp data from the volleydata repository.

Usage

```
load_aupvb_pbp(seasons = NULL)
```

Arguments

seasons An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.

Value

A data frame containing play-by-play data for the specified seasons.

Column Name	Type
season	dbl
week_number	dbl
game_number	dbl
play_sequence_number	dbl

set_number	dbl
rally_number	dbl
play_code	chr
narrative_formatted	chr
played_id	dbl

Examples

```
try({load_aupvb_pbp(2024)})
```

load_aupvb_player_info
<i>Load cleaned aupvb player info data from the volleydata repository</i>

Description

Load cleaned aupvb player info data from the volleydata repository

Usage

```
load_aupvb_player_info(seasons = NULL)
```

Arguments

seasons An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.

Value

A data frame containing player information for the specified seasons.

Column Name	Type
season	dbl
week_number	dbl
game_number	dbl
game_date	chr
rank	dbl
rank_change	dbl
cumulative_podbls	dbl
points_this_match	dbl
played_this_match	lgl
first_name	chr
last_name	chr
uniform_number	dbl
sets_played	dbl

Examples

```
try({load_aupvb_player_info(2024)})
```

load_lovb_events_log	<i>Load cleaned lovb events log data from the volleydata repository.</i>
----------------------	--

Description

Load cleaned lovb events log data from the volleydata repository.

Usage

```
load_lovb_events_log(seasons = NULL)
```

Arguments

seasons An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.

Value

A data frame containing the events log data for the specified seasons.

Column Name	Type
match_id	int
season	int
match_datetime	string
team_name	string
staff_type	string
full_name	string
first_name	string
last_name	string

Examples

```
try({load_lovb_events_log(2025)})
```

load_lovb_officials	<i>Load cleaned lovb officials data from the volleydata repository.</i>
---------------------	---

Description

Load cleaned lovb officials data from the volleydata repository.

Usage

```
load_lovb_officials(seasons = NULL)
```

Arguments

seasons An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.

Value

A data frame containing the officials data for the specified seasons.

Column Name	Type
match_id	dbl
season	dbl
match_datetime	chr
officials_type	chr
full_name	chr
first_name	chr
last_name	chr
level	chr

Examples

```
try({load_lovb_officials(2025)})
```

load_lovb_pbp	<i>Load cleaned lovb play-by-play data from the volleydata repository.</i>
---------------	--

Description

Load cleaned lovb play-by-play data from the volleydata repository.

Usage

```
load_lovb_pbp(seasons = NULL)
```

Arguments

seasons	An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.
---------	---

Value

A data frame containing the play-by-play data for the specified seasons.

Column Name	Type
match_id	int
season	int
match_datetime	string
home_team_name	string
away_team_name	string
team_involved	string
jersey_number	int
action	string
outcome	string
set	int
point_number	int
point_winner	string
home_score	int
away_score	int

Examples

```
try({load_lovb_pbp(2025)})
```

load_lovb_player_boxscore

Load cleaned lovb player boxscore data from the volleydata repository.

Description

Load cleaned lovb player boxscore data from the volleydata repository.

Usage

```
load_lovb_player_boxscore(seasons = NULL)
```

Arguments

seasons An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.

Value

A data frame containing the player boxscore data for the specified seasons.

Column Name	Type
match_id	dbl
season	dbl
match_datetime	chr
player_id	dbl
player_name	chr
first_name	chr
last_name	chr
jersey_number	dbl
primary_position	dbl
roster_status	chr
is_foreign	lgl
is_confederation	lgl
is_captain	lgl
is_libero	lgl
set_1_is_starter	lgl
set_1_starting_position	dbl
set_2_is_starter	lgl
set_2_starting_position	dbl
set_3_is_starter	lgl
set_3_starting_position	dbl
set_4_is_starter	lgl
set_4_starting_position	dbl
set_5_is_starter	lgl
set_5_starting_position	dbl

team_name	chr
team_short_name	chr
team_code	chr
team_color	chr

Examples

```
try({load_lovb_player_boxscore(2025)})
```

load_lovb_schedule	<i>Load cleaned lovb schedule data from the volleydata repository.</i>
--------------------	--

Description

Load cleaned lovb schedule data from the volleydata repository.

Usage

```
load_lovb_schedule(seasons = NULL)
```

Arguments

seasons An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.

Value

A data frame containing the schedule data for the specified seasons.

Column Name	Type
season	int
date	string
round	string
home_team	string
away_team	string
home_team_set_wins	int
away_team_set_wins	int
match_link	string
secondary_link	string
match_id	int

Examples

```
try({load_lovb_schedule(2025)})
```

load_lovb_team_staff *Load cleaned lovb team staff data from the volleydata repository.*

Description

Load cleaned lovb team staff data from the volleydata repository.

Usage

```
load_lovb_team_staff(seasons = NULL)
```

Arguments

seasons An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.

Value

A data frame containing the team staff data for the specified seasons.

Column Name	Type
match_id	dbl
season	dbl
match_datetime	chr
team_name	chr
staff_type	chr
full_name	chr
first_name	chr
last_name	chr

Examples

```
try({load_lovb_team_staff(2025)})
```

load_mlv_events_log *Load cleaned mlv events log data from the volleydata repository.*

Description

Load cleaned mlv events log data from the volleydata repository.

Usage

```
load_mlv_events_log(seasons = NULL)
```

Arguments

seasons An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.

Value

A data frame containing the events log data for the specified seasons.

Column Name	Type
match_id	int
season	int
match_datetime	string
set	int
set_start_time	string
set_end_time	string
set_duration	int
set_final_home_score	int
set_final_away_score	int
event_type	string
event_time	string
libero_enters	bool
team_involved	string
libero_jersey_number	int
libero_substitute_jersey_number	int
rally_start_time	string
rally_end_time	string
rally_point_winner	string
substitute_in_jersey_number	int
substitute_out_jersey_number	int
challenge_approved	string
challenge_reason	string
challenge_method	string
challenge_response	string
challenge_at_home_score	float
challenge_at_away_score	float
challenge_score_change	string
serving_team	string
current_home_score	float
current_away_score	float
home_team_p1	float
home_team_p2	float
home_team_p3	float
home_team_p4	float
home_team_p5	float
home_team_p6	float
away_team_p1	float
away_team_p2	float
away_team_p3	float

away_team_p4	float
away_team_p5	float
away_team_p6	float
verified_time	string
verified_method	string
sanction_type	string
sanction_remark	float
sanction_staff_role	string
staff_first_name	string
staff_last_name	string
staff_type	string
is_exceptional	string

Examples

```
try({load_mlv_events_log(2024)})
```

load_mlv_officials	<i>Load cleaned mlv officials data from the volleydata repository.</i>
--------------------	--

Description

Load cleaned mlv officials data from the volleydata repository.

Usage

```
load_mlv_officials(seasons = NULL)
```

Arguments

seasons	An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.
---------	---

Value

Column Name	Type
match_id	int
season	int
match_datetime	string
officials_type	string
full_name	string
first_name	string
last_name	string
level	string

Examples

```
try({load_mlv_officials(2024)})
```

load_mlv_pbp	<i>Load cleaned mlv points log data form the volleydata repository.</i>
--------------	---

Description

Load cleaned mlv points log data form the volleydata repository.

Usage

```
load_mlv_pbp(seasons = NULL)
```

Arguments

seasons An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.

Value

A data frame containing the play-by-play data for the specified seasons.

Column Name	Type
match_id	int
season	int
match_datetime	string
home_team_name	string
away_team_name	string
team_involved	string
jersey_number	int
action	string
outcome	string
set	int
point_number	int
point_winner	string
home_score	int
away_score	int

Examples

```
try({load_mlv_pbp(2024)})
```

load_mlv_player_boxscore

Load cleaned mlv player boxscore data from the volleydata repository.

Description

Load cleaned mlv player boxscore data from the volleydata repository.

Usage

```
load_mlv_player_boxscore(seasons = NULL)
```

Arguments

seasons An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.

Value

A data frame containing the player boxscore data for the specified seasons.

Column Name	Type
match_id	dbl
season	dbl
match_datetime	chr
set	dbl
set_start_time	chr
set_end_time	chr
set_duration	dbl
set_home_score	dbl
set_away_score	dbl
event_type	chr
event_time	chr
libero_enters	lgl
team_involved	chr
libero_jersey_number	dbl
libero_substitute_jersey_number	dbl
rally_start_time	chr
rally_end_time	chr
point_team	chr
call_approved	lgl
player_in_jersey_number	dbl
player_out_jersey_number	dbl
challenge_reason	chr
challenge_method	chr
challenge_response	chr
challenge_result	chr

home_score_after_challenge	dbl
away_score_after_challenge	dbl

Examples

```
try({load_mlv_player_boxscore(2024)})
```

load_mlv_schedule	<i>Load cleaned mlv schedule data from the volleydata repository.</i>
-------------------	---

Description

Load cleaned mlv schedule data from the volleydata repository.

Usage

```
load_mlv_schedule(seasons = NULL)
```

Arguments

seasons An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.

 All years must be 2024 or later.

Value

Column Name	Type
season	int
date	string
round	string
home_team	string
away_team	string
home_team_set_wins	int
away_team_set_wins	int
result	string
match_link	string

Examples

```
try({load_mlv_schedule(2024)})
```

load_mlv_team_staff	<i>Load cleaned mlv team staff data from the volleydata repository.</i>
---------------------	---

Description

Load cleaned mlv team staff data from the volleydata repository.

Usage

```
load_mlv_team_staff(seasons = NULL)
```

Arguments

seasons An integer or vector of integers of seasons to fetch data for. Defaults to all available seasons.

Value

A data frame containing the team staff data for the specified seasons.

Column Name	Type
match_id	dbl
season	dbl
match_datetime	chr
team_name	chr
staff_type	chr
full_name	chr
first_name	chr
last_name	chr

Examples

```
try({load_mlv_team_staff(2024)})
```
