

# Package ‘toml’

October 16, 2025

**Type** Package

**Title** Read, Write, and Modify TOML Files

**Version** 1.0.0

**Description** Simple toolkit for working with TOML text. Based on tomledit which allows for modifying TOML while preserving order, comments, and whitespace.

**License** MIT + file LICENSE

**Encoding** UTF-8

**Imports** jsonlite, V8 (>= 8.0.0)

**BugReports** <https://github.com/jeroen/toml/issues>

**RoxygenNote** 7.3.2

**NeedsCompilation** no

**Author** Jeroen Ooms [aut, cre]

**Maintainer** Jeroen Ooms <jeroenooms@gmail.com>

**Repository** CRAN

**Date/Publication** 2025-10-16 18:10:02 UTC

toml	<i>Parse or Edit TOML text</i>
------	--------------------------------

---

## Description

The `edit_toml()` function modifies values in a TOML text while retaining the order, comments, and whitespace. Use `read_toml()` and `write_toml()` to convert between TOML text and R lists.

**Usage**

```
read_toml(file, as_json = FALSE)

parse_toml(toml, as_json = FALSE)

write_toml(x, auto_unbox = TRUE)

edit_toml(toml, field, value)
```

**Arguments**

file	path to file with toml text
as_json	return output as json string instead of R list
toml	string
x	vector or json string to convert to TOML
auto_unbox	convert atomic vectors of length 1 as scalars in TOML, unless they are wrapped in <code>I()</code> . See also <a href="#">jsonlite::toJSON</a> .
field	name of field to change, for example <code>package.version</code> .
value	new value of field to set.

**Value**

`parse_toml()` returns a list and `edit_toml()` returns the modified TOML text.

**Examples**

```
toml <- readLines('https://raw.githubusercontent.com/posit-dev/air/refs/heads/main/Cargo.toml')
toml <- edit_toml(toml, 'workspace.package.rust-version', '1.84')
toml <- edit_toml(toml, 'workspace.dependencies.bla', list(path = "./yolo", rev = "123"))
```
