Title SGF (Smart Game File) File Format Import Version 1.0.0 Date 2021-07-13 Author Brad Cable Maintainer Brad Cable Maintainer Brad Cable Maintainer Brad Cable strad@bcable.net> Description Import SGF (Smart Game File) into R. Imports ggplot2, methods, png, stringi, stringr, utils License MIT + file LICENSE NeedsCompilation no Repository CRAN Date/Publication 2021-07-15 07:20:02 UTC R topics documented:			
		Index	3
		Rsgf	R package that imports SGF (Smart Game File). Used for Go and other board games
		Description	
		Imports SGF (S	mart Game File)
		Usage	
		loadSGF(filer	name, game.number=1)
		<pre>playerCard(player_names, sgf_paths)</pre>	
		boardHeatMap(getColorPalet	
		SGFGame(moves	

2 Rsgf

Arguments

filename Path to SGF filename

game.number Value to return for Game.Number, useful for multiple game loading into the

same data.frame

player_names Player name (or player names as vector) to return results for

sgf_paths Path to SGFs or directories that contain SGFs (or paths as vector)

data Aggregate data.frame with X, Y, and Count columns representing the Go/Baduk

board

moves moves returned by playerCard()

count of graded levels for getColorPalette()

Value

loadSGF() returns a data.frame playerCard() returns a data.frame boardHeatMap() returns a ggplot2 graphics object getColorPalette() returns a list of colors based on the count provided for the default Rsgf Go theme SGFGame() returns an RC/S4 object

Author(s)

Brad Cable

Examples

```
# loading lots of SGFs
library(Rsgf)
test_data_dir <- system.file("sgf", package="Rsgf")
player_data <- Rsgf::playerCard("Honinbo Shusaku", test_data_dir)

# Simple aggregation for heatmap:
agg_games <- aggregate(Game.Number ~ x + y, data=player_data, FUN=length)
names(agg_games) <- c("x", "y", "Count")
agg_games$Count <- as.factor(agg_games$Count)

# Graph heatmap
Rsgf::boardHeatMap(agg_games)
