# Package 'mlr3oml'

June 4, 2024

```
Title Connector Between 'mlr3' and 'OpenML'
```

**Version** 0.10.0

**Description** Provides an interface to 'OpenML.org' to list and download machine learning data, tasks and experiments. The 'OpenML' objects can be automatically converted to 'mlr3' objects. For a more sophisticated interface with more upload options, see the 'OpenML' package.

mlr3oml: Connector Between 'mlr3' and 'OpenML'

## **Description**

Index

Provides an interface to 'OpenML.org' to list and download machine learning data, tasks and experiments. The 'OpenML' objects can be automatically converted to 'mlr3' objects. For a more sophisticated interface with more upload options, see the 'OpenML' package.

#### **Documentation**

Start by reading the Large-Scale Benchmarking chapter from the mlr3book.

## mlr3 Integration

This package adds the mlr3::Task "oml" and the mlr3::Resampling "oml" to mlr3::mlr\_tasks and mlr3::mlr\_resamplings, respectively. For the former you may pass either a data\_id or a task\_id, the latter requires a task\_id. Furthermore it allows to convert the OpenML objects to mlr3 objects using the usual S3 generics such as mlr3::as\_task, mlr3::as\_learner, mlr3::as\_resampling, mlr3::as\_resample\_result, mlr3::as\_benchmark\_result or mlr3::as\_data\_backend. This allows for a frictionless integration of OpenML and mlr3.

mlr3oml-package 3

#### **Options**

• mlr3oml.cache: Enables or disables caching globally. If set to FALSE, caching is disabled. If set to TRUE, cache directory as reported by R\_user\_dir() is used. Alternatively, you can specify a path on the local file system here. Default is FALSE.

- mlr3oml.api\_key: API key to use. All operations supported by this package work without an API key, but you might get rate limited without an API key. If not set, defaults to the value of the environment variable OPENMLAPIKEY.
- mlr3oml.arff\_parser: ARFF parser to use, defaults to the internal one relies on data.table::fread(). Can also be set to "RWeka" for the parser in RWeka.
- mlr3oml.parquet: Enables or disables parquet as the default file format. If set to TRUE, the parquet version of datasets will be used by default. If set to FALSE, the arff version of datasets will be used by default. Note that the OpenML sever is still transitioning from arff to parquet and some features will work better with arff. Default is FALSE.
- mlr3oml.retries: An integer defining number of retries when downloading data from OpenML. If it is NULL, the number of retries is set to 3.

#### Relevant for developers

- mlr3oml.test\_server: The default value for whether to use the OpenML test server. Default is FALSE.
- mlr3oml.test\_api\_key: API key to use for the test server. If not set, defaults to the value of the environment variable TESTOPENMLAPIKEY.

#### Logging

The lgr package is used for logging. To change the threshold, use lgr::get\_logger("mlr3oml")\$set\_threshold().

list\_oml

as\_learner.OMLFlow

Convert an OpenML Flow to a mlr3 Learner

#### **Description**

By default this function creates a Pseudo-Learner (that cannot be used for training or prediction) for the given task type. This enables the conversion of OpenML Runs to mlr3::ResampleResults. This is well defined because each subcomponent (i.e. id) can only appear once in a Flow according to the OpenML docs.

## Usage

```
## S3 method for class 'OMLFlow'
as_learner(x, task_type = NULL, ...)
```

# **Arguments**

x (OMLFlow) The OMLFlow that is converted to a mlr3::Learner.
 task\_type (character(1)) The task type to constrct a pseudo-learner. For more information see OMLFlow.
 ... Additional arguments.

list\_oml

List Data from OpenML

# Description

This function allows to query data sets, tasks, flows, setups, runs, and evaluation measures from <a href="https://www.openml.org/search?type=data&sort=runs&status=active">https://www.openml.org/search?type=data&sort=runs&status=active</a> using some simple filter criteria.

To find datasets for a specific task type, use <code>list\_oml\_tasks()</code> which supports filtering according to the task type. Another heuristic to search for possible regression tasks is to search for data sets with 0 number of classes, i.e. by specifying number\_classes = 0.

# Usage

```
list_oml_data(
  data_id = NULL,
  data_name = NULL,
  number_instances = NULL,
  number_features = NULL,
  number_classes = NULL,
  number_missing_values = NULL,
  tag = NULL,
```

list\_oml 5

```
limit = limit_default(),
  test_server = test_server_default(),
)
list_oml_evaluations(
  run_id = NULL,
  task_id = NULL,
 measures = NULL,
  tag = NULL,
 limit = limit_default(),
  test_server = test_server_default(),
)
list_oml_flows(
  uploader = NULL,
  tag = NULL,
  limit = limit_default(),
  test_server = test_server_default(),
)
list_oml_measures(test_server = test_server_default())
list_oml_runs(
  run_id = NULL,
  task_id = NULL,
  tag = NULL,
  flow_id = NULL,
  limit = limit_default(),
  test_server = test_server_default(),
)
list_oml_setups(
  flow_id = NULL,
  setup_id = NULL,
  tag = NULL,
  limit = limit_default(),
  test_server = test_server_default(),
)
list_oml_tasks(
  task_id = NULL,
  data_id = NULL,
  number_instances = NULL,
```

6 list\_oml

```
number_features = NULL,
      number_classes = NULL,
      number_missing_values = NULL,
      tag = NULL,
      limit = limit_default(),
      test_server = test_server_default(),
      type = NULL,
    )
Arguments
    data_id
                      (integer())
                      Vector of data ids to restrict to.
                      (character(1))
    data_name
                      Filter for name of data set.
    number_instances
                      (integer())
                      Filter for number of instances.
    number_features
                      (integer())
                      Filter for number of features.
    number_classes (integer())
                      Filter for number of labels of the target (only classification tasks).
    number_missing_values
                      (integer())
                      Filter for number of missing values.
                      (character())
    tag
                      Filter for tags. You can provide multiple tags as character vector.
    limit
                      (integer())
                      Limit the results to limit records. Default is the value of option "mlr3oml.limit",
                      defaulting to 5000.
                      (character(1))
    test_server
                      Whether to use the OpenML test server or public server. Defaults to value of
                      option "mlr3oml.test_server", or FALSE if not set.
                      (any)
                      Additional (unsupported) filters, as named arguments.
    run_id
                      (integer())
                      Vector of run ids to restrict to.
    task_id
                      (integer())
                      Vector of task ids to restrict to.
    measures
                      (character())
                      Vector of evaluation measures to restrict to.
    uploader
                      (integer(1))
                      Filter for uploader.
```

ocl 7

```
flow_id (integer(1))
Filter for flow id.

setup_id (integer())
Vector of setup ids to restrict to.

type (character(1))
The task type, supported values are: "clasisf", "regr", "surv" and "clust".
```

#### **Details**

Filter values are usually provided as single atomic values (typically integer or character). Provide a numeric vector of length 2 (c(1, u)) to find matches in the range [l, u].

Note that only a subset of filters is exposed here. For a more feature-complete package, see **OpenML**. Alternatively, you can pass additional filters via ... using the names of the official API, c.f. the *REST* tab of https://www.openml.org/apis.

#### Value

(data.table()) of results, or a null data.table if no data set matches the filter criteria.

ocl

Syntactic Sugar for Collection Construction

#### **Description**

Creates an OMLCollection instance.

#### Usage

```
ocl(id, test_server = test_server_default())
```

8 odt

## **Arguments**

id (integer(1))

OpenML id for the object.

test\_server (character(1))

Whether to use the OpenML test server or public server. Defaults to value of

option "mlr3oml.test\_server", or FALSE if not set.

#### Value

(OMLCollection)

odt

Syntactic Sugar for Data Construction

## **Description**

Creates an OMLData instance.

## Usage

```
odt(id, parquet = parquet_default(), test_server = test_server_default())
```

## **Arguments**

id (integer(1))

OpenML id for the object.

parquet (logical(1))

Whether to use parquet instead of arff. If parquet is not available, it will fall back to arff. Defaults to value of option "mlr3oml.parquet" or FALSE if not

set.

test\_server (character(1))

Whether to use the OpenML test server or public server. Defaults to value of

option "mlr3oml.test\_server", or FALSE if not set.

## Value

(OMLData)

oflw 9

oflw

Syntactic Sugar for Flow Construction

#### **Description**

Creates an OMLFlow instance.

# Usage

```
oflw(id, test_server = test_server_default())
```

#### **Arguments**

id (integer(1))

OpenML id for the object.

test\_server (character(1))

Whether to use the OpenML test server or public server. Defaults to value of

option "mlr3oml.test\_server", or FALSE if not set.

#### Value

(OMLFlow)

oml\_collection

OpenML Collection

## Description

This is the class for collections (previously known as studies) served on https://www.openml.org. A collection can either be a task collection or run collection. This object can also be constructed using the sugar function ocl().

## **Run Collection**

A run collection contains runs, flows, datasets and tasks. The primary object are the runs (main\_entity\_type is "run"). The the flows, datasets and tasks are those used in the runs.

**Task Collection** A task collection (main\_entity\_type = "task") contains tasks and datasets. The primary object are the tasks (main\_entity\_type is "task"). The datasets are those used in the tasks.

Note: All Benchmark Suites on OpenML are also collections.

#### Caching

Because collections on OpenML can be modified (ids can be added), it is not possible to cache this object.

10 oml\_collection

#### mlr3 Intergration

- Obtain a list of mlr3::Tasks using mlr3::as\_tasks.
- Obtain a list of mlr3::Resamplings using mlr3::as\_resamplings.
- Obtain a list of mlr3::Learners using mlr3::as\_learners (if main\_entity\_type is "run").
- Obtain a mlr3::BenchmarkResult using mlr3::as\_benchmark\_result (if main\_entity\_type is "run").

## Super class

```
mlr3oml::OMLObject -> OMLCollection
```

## **Active bindings**

```
desc (list())
    Collection description (meta information), downloaded and converted from the JSON API
    response.

parquet (logical(1))
    Whether to use parquet.

main_entity_type (character(n))
    The main entity type, either "run" or "task".

flow_ids (integer(n))
    An vector containing the flow ids of the collection.

data_ids (integer(n))
    An vector containing the data ids of the collection.

run_ids (integer(n))
    An vector containing the run ids of the collection.

task_ids (integer(n))
    An vector containing the task ids of the collection.
```

# Methods

#### **Public methods:**

- OMLCollection\$new()
- OMLCollection\$print()
- OMLCollection\$download()
- OMLCollection\$clone()

Method new(): Creates a new instance of this R6 class.

```
Usage:
OMLCollection$new(id, test_server = test_server_default())
Arguments:
id (integer(1))
    OpenML id for the object.
```

```
test_server (character(1))
    Whether to use the OpenML test server or public server. Defaults to value of option
    "mlr3oml.test_server", or FALSE if not set.

Method print(): Prints the object.

Usage:
    OMLCollection$print()

Method download(): Downloads the whole object for offline usage.

Usage:
    OMLCollection$download()

Method clone(): The objects of this class are cloneable with this method.

Usage:
    OMLCollection$clone(deep = FALSE)

Arguments:
    deep Whether to make a deep clone.
```

```

oml\_data

Interface to OpenML Data Sets

#### **Description**

This is the class for data sets served on OpenML. This object can also be constructed using the sugar function odt().

#### mlr3 Integration

• A mlr3::Task can be obtained by calling mlr3::as\_task(). The target column must either be the default target (this is the default behaviour) or one of \$feature\_names. In case the target is specified to be one of \$feature\_names, the default target is added to the features of the task.

• A mlr3::DataBackend can be obtained by calling mlr3::as\_data\_backend(). Depending on the selected file-type, the returned backend is a mlr3::DataBackendDataTable (arff) or mlr3db::DataBackendDuckDB (parquet). Note that a converted backend can contain columns beyond the target and the features (id column or ignore columns).

#### Name conversion

Column names that don't comply with R's naming scheme are renamed (see base::make.names()). This means that the names can differ from those on OpenML.

#### File Format

The datasets stored on OpenML are either stored as (sparse) ARFF or parquet. When creating a new OMLData object, the constructor argument parquet allows to switch between arff and parquet. Note that not necessarily all data files are available as parquet. The option mlr3oml.parquet can be used to set a default. If parquet is TRUE but not available, "arff" will be used as a fallback.

#### **ARFF Files**

This package comes with an own reader for ARFF files, based on data.table::fread(). For sparse ARFF files and if the **RWeka** package is installed, the reader automatically falls back to the implementation in (RWeka::read.arff()).

#### **Parquet Files**

For the handling of parquet files, we rely on **duckdb** and **DBI**.

#### Super class

```
mlr3oml::OMLObject -> OMLData
```

#### **Active bindings**

```
qualities (data.table())
    Data set qualities (performance values), downloaded from the JSON API response and converted to a data.table::data.table() with columns "name" and "value".

tags (character())
    Returns all tags of the object.

parquet (logical(1))
    Whether to use parquet.

data (data.table())
    Returns the data (without the row identifier and ignore id columns).
```

```
features (data.table())
```

Information about data set features (including target), downloaded from the JSON API response and converted to a data.table::data.table() with columns:

- "index" (integer()): Column position.
- "name" (character()): Name of the feature.
- "data\_type" (factor()): Type of the feature: "nominal" or "numeric".
- "nominal\_value" (list()): Levels of the feature, or NULL for numeric features.
- "is\_target" (logical()): TRUE for target column, FALSE otherwise.
- "is\_ignore" (logical()): TRUE if this feature should be ignored. Ignored features are removed automatically from the data set.
- "is\_row\_identifier" (logical()): TRUE if the column encodes a row identifier. Row identifiers are removed automatically from the data set.
- "number\_of\_missing\_values" (integer()): Number of missing values in the column.

```
target_names (character())
```

Name of the default target, as extracted from the OpenML data set description.

```
feature_names (character())
```

Name of the features, as extracted from the OpenML data set description.

```
nrow (integer())
```

Number of observations, as extracted from the OpenML data set qualities.

```
ncol (integer())
```

Number of features (including targets), as extracted from the table of data set features. This excludes row identifiers and ignored columns.

```
license (character())
```

Returns all license of the dataset.

```
parquet_path (character())
```

Downloads the parquet file (or loads from cache) and returns the path of the parquet file. Note that this also normalizes the names of the parquet file.

#### Methods

#### **Public methods:**

- OMLData\$new()
- OMLData\$print()
- OMLData\$download()
- OMLData\$quality()
- OMLData\$clone()

**Method** new(): Creates a new instance of this R6 class.

```
Usage:
OMLData$new(
  id,
  parquet = parquet_default(),
  test_server = test_server_default()
```

```
Arguments:
 id (integer(1))
     OpenML id for the object.
 parquet (logical(1))
     Whether to use parquet instead of arff. If parquet is not available, it will fall back to arff.
     Defaults to value of option "mlr3oml.parquet" or FALSE if not set.
 test_server (character(1))
     Whether to use the OpenML test server or public server. Defaults to value of option
     "mlr3oml.test_server", or FALSE if not set.
Method print(): Prints the object. For a more detailed printer, convert to a mlr3::Task via
as_task().
 Usage:
 OMLData$print()
Method download(): Downloads the whole object for offline usage.
 Usage:
 OMLData$download()
Method quality(): Returns the value of a single OpenML data set quality.
 Usage:
 OMLData$quality(name)
 Arguments:
 name (character(1))
     Name of the quality to extract.
Method clone(): The objects of this class are cloneable with this method.
 OMLData$clone(deep = FALSE)
 Arguments:
 deep Whether to make a deep clone.
```

oml\_flow 15

 $oml_flow$ 

Interface to OpenML Flows

#### **Description**

This is the class for flows served on OpenML. Flows represent machine learning algorithms. This object can also be constructed using the sugar function of lw().

## mlr3 Integration

• Obtain a mlr3::Learner using mlr3::as\_learner().

#### Super class

```
mlr3oml::OMLObject -> OMLFlow
```

## **Active bindings**

```
parameter (data.table)
The parameters of the flow.
dependencies (character())
The dependencies of the flow.
tags (character())
Returns all tags of the object.
```

#### Methods

#### **Public methods:**

```
• OMLFlow$new()
```

- OMLFlow\$print()
- OMLFlow\$download()
- OMLFlow\$clone()

**Method** new(): Creates a new instance of this R6 class.

```
Usage:
OMLFlow$new(id, test_server = test_server_default())
Arguments:
id (integer(1))
   OpenML id for the object.
test_server (character(1))
   Whether to use the OpenML test server or public server. Defaults to value of option
   "mlr3oml.test_server", or FALSE if not set.
```

Method print(): Prints the object.

Usage:

oml\_object

```
OMLFlow$print()

Method download(): Downloads the whole object for offline usage.

Usage:
OMLFlow$download()

Method clone(): The objects of this class are cloneable with this method.

Usage:
OMLFlow$clone(deep = FALSE)

Arguments:
deep Whether to make a deep clone.
```

```

oml\_object

Abstract Base Class for OpenML objects.

## Description

All OML Objects inherit from this class. Don't use his class directly.

## **Active bindings**

```
desc (list())
    Description of OpenML object.

cache_dir (logical(1) | character(1))
    Stores the location of the cache for objects retrieved from OpenML. If set to FALSE, caching is disabled. Objects from the test server are stored in the subdirectory 'test', those from the public server are stored in the subdirectory 'public'.
    The package qs is required for caching.

id (integer(1))
    OpenML data id.
```

oml\_object 17

```
server (character(1))
        The server for this object.
    man (character(1))
        The manual entry.
    name (character(1))
        The name of the object.
    type (character())
         The type of OpenML object (e.g. task, run, ...).
    test_server (logical(1))
        Whether the object is using the test server.
Methods
     Public methods:
       • OMLObject$new()
       • OMLObject$help()
       • OMLObject$clone()
     Method new(): Creates a new instance of this R6 class.
       OMLObject$new(id, test_server = test_server_default(), type)
       Arguments:
       id (integer(1))
           OpenML id for the object.
       test_server (character(1))
           Whether to use the OpenML test server or public server. Defaults to value of option
           "mlr3oml.test_server", or FALSE if not set.
       type (charcater())
           The type of OpenML object (e.g. run, task, ...).
     Method help(): Opens the corresponding help page referenced by field $man.
       Usage:
       OMLObject$help()
     Method clone(): The objects of this class are cloneable with this method.
       Usage:
       OMLObject$clone(deep = FALSE)
       Arguments:
       deep Whether to make a deep clone.
```

18 oml\_run

oml\_run

Interface to OpenML Runs

# **Description**

This is the class for OpenML Runs, which are conceptually similar to mlr3::ResampleResults. This object can also be constructed using the sugar function oml\_run().

# **OpenML Integration**

- A OMLTask is returned by accessing the active field \$task.
- A OMLData is returned by accessing the active field \$data (short for \$task\$data)
- A OMLFlow is returned by accessing the active field \$flow.
- The raw predictions are returned by accessing the active field \$prediction.

# mlr3 Integration

- A mlr3::ResampleResult is returned when calling mlr3::as\_resample\_result().
- A mlr3::Task is returned when calling mlr3::as\_task().
- A mlr3::DataBackend is returned when calling mlr3::as\_data\_backend().
- A instantiated mlr3::Resampling is returned when calling mlr3::as\_resampling().

#### Super class

```
mlr3oml::OMLObject -> OMLRun
```

#### **Active bindings**

```
flow_id (integer(1))
    The id of the flow.
flow (OMLFlow)
    The OpenML Flow.
tags (character())
     Returns all tags of the object.
parquet (logical(1))
     Whether to use parquet.
task_id (character(1))
    The id of the task solved by this run.
task (OMLTask)
    The task solved by this run.
data_id (integer(1))
    The id of the dataset.
data (OMLData)
     The data used in this run.
```

oml\_run 19

```
task_type (character())
         The task type.
    parameter_setting data.table())
         The parameter setting for this run.
    prediction (data.table())
         The raw predictions of the run as returned by OpenML, not in standard mlr3 format. Formatted
         predictions are accessible after converting to a mlr3::ResampleResult via as_resample_result().
    evaluation (data.table())
         The evaluations calculated by the OpenML server.
Methods
     Public methods:
       • OMLRun$new()
       • OMLRun$print()
       • OMLRun$download()
       • OMLRun$clone()
     Method new(): Creates a new instance of this R6 class.
       Usage:
       OMLRun$new(
         id,
         parquet = parquet_default(),
         test_server = test_server_default()
       )
       Arguments:
       id (integer(1))
           OpenML id for the object.
       parquet (logical(1))
           Whether to use parquet instead of arff. If parquet is not available, it will fall back to arff.
           Defaults to value of option "mlr3oml.parquet" or FALSE if not set.
       test_server (character(1))
           Whether to use the OpenML test server or public server. Defaults to value of option
           "mlr3oml.test_server", or FALSE if not set.
     Method print(): Prints the object.
       Usage:
       OMLRun$print()
     Method download(): Downloads the whole object for offline usage.
       Usage:
       OMLRun$download()
     Method clone(): The objects of this class are cloneable with this method.
       Usage:
       OMLRun$clone(deep = FALSE)
       Arguments:
       deep Whether to make a deep clone.
```

```

oml\_task

Interface to OpenML Tasks

## **Description**

This is the class for tasks served on OpenML. It consists of a dataset and other meta-information such as the target variable for supervised problems. This object can also be constructed using the sugar function otsk().

# mlr3 Integration

- Obtain a mlr3::Task by calling as\_task().
- Obtain a mlr3::Resampling by calling as\_resampling().

#### Super class

```
mlr3oml::OMLObject -> OMLTask
```

#### **Active bindings**

```
estimation_procedure (list())
The estimation procedure, returns NULL if none is available.

task_splits (data.table())
A data.table containing the splits as provided by OpenML.

tags (character())
Returns all tags of the object.

parquet (logical(1))
Whether to use parquet.

name (character(1))
Name of the task, extracted from the task description.
```

oml\_task 21

```
task_type (character(1))
         The OpenML task type.
    data_id (integer())
         Data id, extracted from the task description.
    data (OMLData)
         Access to the underlying OpenML data set via a OMLData object.
    nrow (integer())
         Number of rows, extracted from the OMLData object.
    ncol (integer())
         Number of columns, as extracted from the OMLData object.
    target_names (character())
         Name of the targets, as extracted from the OpenML task description.
    feature_names (character())
         Name of the features (without targets of this OMLTask).
    data_name (character())
         Name of the dataset (inferred from the task name).
Methods
     Public methods:
       • OMLTask$new()
       • OMLTask$print()
       • OMLTask$download()
       • OMLTask$clone()
     Method new(): Creates a new instance of this R6 class.
       Usage:
       OMLTask$new(
         id,
         parquet = parquet_default(),
         test_server = test_server_default()
       )
       Arguments:
       id (integer(1))
           OpenML id for the object.
       parquet (logical(1))
           Whether to use parquet instead of arff. If parquet is not available, it will fall back to arff.
           Defaults to value of option "mlr3oml.parquet" or FALSE if not set.
       test_server (character(1))
           Whether to use the OpenML test server or public server. Defaults to value of option
           "mlr3oml.test_server", or FALSE if not set.
     Method print(): Prints the object. For a more detailed printer, convert to a mlr3::Task via
     $task.
```

Usage:

orn 22

```
OMLTask$print()
```

**Method** download(): Downloads the whole object for offline usage.

Usage:

OMLTask\$download()

**Method** clone(): The objects of this class are cloneable with this method.

Usage.

OMLTask\$clone(deep = FALSE)

Arguments:

deep Whether to make a deep clone.

orn

Syntactic Sugar for Run Construction

#### **Description**

Creates an OMLRun instance.

# Usage

```
orn(id, parquet = parquet_default(), test_server = test_server_default())
```

# Arguments

id (integer(1))

OpenML id for the object.

parquet (logical(1))

Whether to use parquet instead of arff. If parquet is not available, it will fall back to arff. Defaults to value of option "mlr3oml.parquet" or FALSE if not

set.

test\_server (character(1))

Whether to use the OpenML test server or public server. Defaults to value of

option "mlr3oml.test\_server", or FALSE if not set.

otsk 23

## Value

```
(OMLRun)
```

otsk

Syntactic Sugar for Task Construction

#### **Description**

Creates an OMLTask instance.

#### Usage

```
otsk(id, parquet = parquet_default(), test_server = test_server_default())
```

# Arguments

id (integer(1))

OpenML id for the object.

parquet (logical(1))

Whether to use parquet instead of arff. If parquet is not available, it will fall back to arff. Defaults to value of option "mlr3oml.parquet" or FALSE if not

back to arm. Defaults to value of option "mirsomi.parquet" or FALSE

set.

test\_server (character(1))

Whether to use the OpenML test server or public server. Defaults to value of

option "mlr3oml.test\_server", or FALSE if not set.

#### Value

(OMLTask)

publish\_collection

Publish a Collection to OpenML

# Description

Publish a collection to OpenML This can also be achieved through the website.

## Usage

```
publish_collection(
  ids,
  name,
  desc,
  main_entity_type = "task",
  alias = NULL,
  api_key = NULL,
  test_server = test_server_default()
)
```

24 publish\_data

#### **Arguments**

ids (integer()) The IDs to include in the collection. Depending on the main entity tupe, these can be task or run IDs. name (character(1)) The name for the collection. desc (character(1)) The description of the collection. main\_entity\_type (character(1)) The main entity type of the collection. Can be either "task" or "run". alias (character(1)) The alias for the collection. api\_key (character(1)) The API key to perform the action, if left NULL it first tries the "mlr3oml.api\_key" R option and then the environment variable OPENMLAPIKEY. In case test\_server is TRUE (only relevant for developers) the test server API key is used, i.e. first the option "mlr3oml.test\_api\_key" and then the environment variable TESTOPENMLAPIKEY.

test\_server (character(1))

Whether to use the OpenML test server or public server. Defaults to value of

option "mlr3oml.test\_server", or FALSE if not set.

publish\_data

Upload data to OpenML

#### **Description**

Upload a dataset to OpenML. This can also be achieved through the website.

## Usage

```
publish_data(
   data,
   name,
   desc,
   license = NULL,
   default_target = NULL,
   citation = NULL,
   row_identifier = NULL,
   ignore_attribute = NULL,
   original_data_url = NULL,
   paper_url = NULL,
   test_server = test_server_default(),
   api_key = NULL
)
```

publish\_task 25

## **Arguments**

data (data.frame())

The data to upload.

name (character(1))

The name of the dataset.

desc (character(1))

The description of the dataset.

license (character(1))

The license of the dataset

default\_target (character(1))

The default target variable.

citation (character(1))

How to cite the dataset.

row\_identifier (character(1))

Whether any of the columns is a row identifier.

ignore\_attribute

(character(1))

Which columns to ignore during modeling.

original\_data\_url

(character(1))

The URL of the original data set.

paper\_url (character(1))

The URL of the paper describing the data set.

test\_server (character(1))

Whether to use the OpenML test server or public server. Defaults to value of

option "mlr3oml.test\_server", or FALSE if not set.

api\_key (character(1)) The API key to perform the action, if left NULL it first tries the

"mlr3oml.api\_key" R option and then the environment variable OPENMLAPIKEY.

In case test\_server is TRUE (only relevant for developers) the test server API key is used, i.e. first the option "mlr3oml.test\_api\_key" and then the environ-

ment variable TESTOPENMLAPIKEY.

publish\_task

Publish a task on OpenML

#### **Description**

Publish a task on OpenML. This can also be achieved through the website.

26 read\_arff

#### Usage

```
publish_task(
   id,
   type,
   estimation_procedure,
   target,
   api_key = NULL,
   test_server = test_server_default()
)
```

#### **Arguments**

id (integer(1)) The dataset id. (character(1) or integer(1)) type Can either be "classif" or "regr" or an integer indicating the task type. estimation\_procedure (integer(1)) The id of the estimation procedure. target (character(1)) The target variable (if applicable). api\_key (character(1)) The API key to perform the action, if left NULL it first tries the "mlr3oml.api\_key" R option and then the environment variable OPENMLAPIKEY. In case test\_server is TRUE (only relevant for developers) the test server API key is used, i.e. first the option "mlr3oml.test\_api\_key" and then the environment variable TESTOPENMLAPIKEY. test\_server (character(1)) Whether to use the OpenML test server or public server. Defaults to value of

option "mlr3oml.test\_server", or FALSE if not set.

read\_arff Read ARFF files

# Description

Parses a file located at path and returns a data.table().

Limitations:

- Only works for dense files, no support for sparse data. Use RWeka instead.
- Dates (even if there is no time component) are read in as POSIXct.
- The date-format from the ARFF specification is currently ignored. Instead, we rely on the auto-detection of **data.table**'s fread()..

write\_arff 27

# Usage

```
read_arff(path)
```

# Arguments

```
path (character(1))
```

Path or URI of the ARFF file, passed to file().

#### Value

```
(data.table()).
```

write\_arff

Write ARFF files

# Description

Writes a data.frame() to an ARFF file.

Limitations:

- Logicals are written as categorical features.
- POSIXct columns are converted to UTC.

# Usage

```
write_arff(data, path, relation = deparse(substitute(data)))
```

## **Arguments**

data (data.frame())

Data to write.

path (character(1))

Path or URI of the ARFF file, passed to file().

relation (character(1))

Relation (name) of the data set.
