Package 'mllrnrs'

July 5, 2024

```
Title R6-Based ML Learners for 'mlexperiments'
Version 0.0.4
Description Enhances 'mlexperiments'
      <a href="https://CRAN.R-project.org/package=mlexperiments">https://CRAN.R-project.org/package=mlexperiments</a> with additional
      machine learning ('ML') learners. The package provides R6-based
      learners for the following algorithms: 'glmnet'
      <https://CRAN.R-project.org/package=glmnet>, 'ranger'
      <https://CRAN.R-project.org/package=ranger>, 'xgboost'
      <a href="https://CRAN.R-project.org/package=xgboost">https://CRAN.R-project.org/package=xgboost</a>, and 'lightgbm'
      <a href="https://CRAN.R-project.org/package=lightgbm">https://CRAN.R-project.org/package=lightgbm</a>. These can be used
      directly with the 'mlexperiments' R package.

Description

The LearnerGlmnet class is the interface to the glmnet R package for use with the mlexperiments package.

Details

Optimization metric: Can be used with

• mlexperiments::MLTuneParameters

• mlexperiments::MLCrossValidation

• mlexperiments::MLNestedCV

Super class

mlexperiments::MLLearnerBase -> LearnerGlmnet

Methods

Public methods:

- LearnerGlmnet\$new()
- LearnerGlmnet\$clone()

Method new(): Create a new LearnerGlmnet object.

Usage:

LearnerGlmnet\$new(metric_optimization_higher_better)

Arguments:

metric_optimization_higher_better A logical. Defines the direction of the optimization metric used throughout the hyperparameter optimization.

Returns: A new LearnerGlmnet R6 object.

LearnerGlmnet 3

```
Examples:
LearnerGlmnet$new(metric_optimization_higher_better = FALSE)

Method clone(): The objects of this class are cloneable with this method.

Usage:
LearnerGlmnet$clone(deep = FALSE)

Arguments:
deep Whether to make a deep clone.
```

See Also

```
glmnet::glmnet(), glmnet::cv.glmnet()
```

```
# binary classification
library(mlbench)
data("PimaIndiansDiabetes2")
dataset <- PimaIndiansDiabetes2 |>
  data.table::as.data.table() |>
  na.omit()
seed <- 123
feature_cols <- colnames(dataset)[1:8]</pre>
train_x <- model.matrix(</pre>
  ~ -1 + .,
  dataset[, .SD, .SDcols = feature_cols]
train_y <- as.integer(dataset[, get("diabetes")]) - 1L</pre>
fold_list <- splitTools::create_folds(</pre>
  y = train_y,
  k = 3,
  type = "stratified",
  seed = seed
glmnet_cv <- mlexperiments::MLCrossValidation$new(</pre>
  learner = mllrnrs::LearnerGlmnet$new(
    metric_optimization_higher_better = FALSE
  fold_list = fold_list,

  alpha = 1,
  lambda = 0.1,
  family = "binomial",
```

4 LearnerLightgbm

LearnerLightgbm

R6 Class to construct a LightGBM learner

Description

The LearnerLightgbm class is the interface to the lightgbm R package for use with the mlexperiments package.

Details

Optimization metric: needs to be specified with the learner parameter metric. The following options can be set via options():

- "mlexperiments.optim.lgb.nrounds" (default: 5000L)
- "mlexperiments.optim.lgb.early_stopping_rounds" (default: 500L)
- "mlexperiments.lgb.print_every_n" (default: 50L)
- "mlexperiments.lgb.verbose" (default: -1L)

LearnerLightgbm can be used with

- mlexperiments::MLTuneParameters
- mlexperiments::MLCrossValidation
- mlexperiments::MLNestedCV

Super class

mlexperiments::MLLearnerBase -> LearnerLightgbm

LearnerLightgbm 5

Methods

```
Public methods:
```

```
• LearnerLightgbm$new()
```

```
• LearnerLightgbm$clone()
```

```
Method new(): Create a new LearnerLightgbm object.
```

```
Usage:
```

LearnerLightgbm\$new(metric_optimization_higher_better)

Arguments:

metric_optimization_higher_better A logical. Defines the direction of the optimization metric used throughout the hyperparameter optimization.

Returns: A new LearnerLightgbm R6 object.

Examples:

LearnerLightgbm\$new(metric_optimization_higher_better = FALSE)

Method clone(): The objects of this class are cloneable with this method.

```
Usage:
```

LearnerLightgbm\$clone(deep = FALSE)

Arguments:

deep Whether to make a deep clone.

See Also

```
lightgbm::lgb.train(), lightgbm::lgb.cv()
```

```
# binary classification
library(mlbench)
data("PimaIndiansDiabetes2")
dataset <- PimaIndiansDiabetes2 |>
 data.table::as.data.table() |>
 na.omit()
seed <- 123
feature_cols <- colnames(dataset)[1:8]</pre>
param_list_lightgbm <- expand.grid(</pre>
 bagging_fraction = seq(0.6, 1, .2),
 feature_fraction = seq(0.6, 1, .2),
 min_data_in_leaf = seq(10, 50, 10),
 learning_rate = seq(0.1, 0.2, 0.1),
 num_{leaves} = seq(10, 50, 10),
 max_depth = -1L
)
```

6 LearnerLightgbm

```
train_x <- model.matrix(</pre>
  ~ -1 + .,
 dataset[, .SD, .SDcols = feature_cols]
)
train_y <- as.integer(dataset[, get("diabetes")]) - 1L</pre>
fold_list <- splitTools::create_folds(</pre>
  y = train_y,
  k = 3,
  type = "stratified",
  seed = seed
lightgbm_cv <- mlexperiments::MLCrossValidation$new(</pre>
  learner = mllrnrs::LearnerLightgbm$new(
   metric_optimization_higher_better = FALSE
  ),
  fold_list = fold_list,
  ncores = 2,
  seed = 123
lightgbm_cv$learner_args <- c(</pre>
  as.list(
   data.table::data.table(
      param_list_lightgbm[37, ],
      stringsAsFactors = FALSE
   ),
  ),
  list(
   objective = "binary",
   metric = "binary_logloss"
  nrounds = 45L
lightgbm_cv$performance_metric_args <- list(positive = "1")</pre>
lightgbm_cv$performance_metric <- mlexperiments::metric("auc")</pre>
# set data
lightgbm_cv$set_data(
  x = train_x,
  y = train_y
)
lightgbm_cv$execute()
## -----
## Method `LearnerLightgbm$new`
LearnerLightgbm$new(metric_optimization_higher_better = FALSE)
```

LearnerRanger 7

LearnerRanger

R6 Class to construct a Ranger learner

Description

The Learner Ranger class is the interface to the ranger R package for use with the mlexperiments package.

Details

Optimization metric:

• classification: classification error rate

• regression: mean squared error Can be used with

• mlexperiments::MLTuneParameters

• mlexperiments::MLCrossValidation

• mlexperiments::MLNestedCV

Super class

```
mlexperiments::MLLearnerBase -> LearnerRanger
```

Methods

Public methods:

- LearnerRanger\$new()
- LearnerRanger\$clone()

Method new(): Create a new LearnerRanger object.

Usage:

LearnerRanger\$new()

Returns: A new LearnerRanger R6 object.

Examples:

LearnerRanger\$new()

Method clone(): The objects of this class are cloneable with this method.

Usage:

LearnerRanger\$clone(deep = FALSE)

Arguments:

deep Whether to make a deep clone.

See Also

```
ranger::ranger()
```

8 LearnerRanger

```
# binary classification
library(mlbench)
data("PimaIndiansDiabetes2")
dataset <- PimaIndiansDiabetes2 |>
  data.table::as.data.table() |>
  na.omit()
seed <- 123
feature_cols <- colnames(dataset)[1:8]</pre>
param_list_ranger <- expand.grid(</pre>
  num.trees = seq(500, 1000, 500),
 mtry = seq(2, 6, 2),
 min.node.size = seq(1, 9, 4),
 \max.depth = seq(1, 9, 4),
  sample.fraction = seq(0.5, 0.8, 0.3)
)
train_x <- model.matrix(</pre>
  ~ -1 + .,
 dataset[, .SD, .SDcols = feature_cols]
train_y <- as.integer(dataset[, get("diabetes")]) - 1L</pre>
fold_list <- splitTools::create_folds(</pre>
  y = train_y,
  k = 3,
  type = "stratified",
  seed = seed
ranger_cv <- mlexperiments::MLCrossValidation$new(</pre>
  learner = mllrnrs::LearnerRanger$new(),
  fold_list = fold_list,
  ncores = 2,
  seed = 123
)
ranger_cv$learner_args <- c(</pre>
  as.list(
    data.table::data.table(
      param_list_ranger[37, ],
      stringsAsFactors = FALSE
    ),
  ),
  list(classification = TRUE)
ranger_cv$performance_metric_args <- list(positive = "1")</pre>
ranger_cv$performance_metric <- mlexperiments::metric("auc")</pre>
# set data
ranger_cv$set_data(
```

LearnerXgboost 9

LearnerXgboost

R6 Class to construct a Xgboost learner

Description

The LearnerXgboost class is the interface to the xgboost R package for use with the mlexperiments package.

Details

Optimization metric: needs to be specified with the learner parameter eval_metric. The following options can be set via options():

- "mlexperiments.optim.xgb.nrounds" (default: 5000L)
- "mlexperiments.optim.xgb.early_stopping_rounds" (default: 500L)
- "mlexperiments.xgb.print_every_n" (default: 50L)
- "mlexperiments.xgb.verbose" (default: FALSE)

LearnerXgboost can be used with

- mlexperiments::MLTuneParameters
- mlexperiments::MLCrossValidation
- mlexperiments::MLNestedCV

Super class

mlexperiments::MLLearnerBase -> LearnerXgboost

10 LearnerXgboost

Methods

Public methods:

- LearnerXgboost\$new()
- LearnerXgboost\$clone()

```
Method new(): Create a new LearnerXgboost object.
```

Usage:

LearnerXgboost\$new(metric_optimization_higher_better)

Arguments:

metric_optimization_higher_better A logical. Defines the direction of the optimization metric used throughout the hyperparameter optimization.

Returns: A new LearnerXgboost R6 object.

Examples:

LearnerXgboost\$new(metric_optimization_higher_better = FALSE)

Method clone(): The objects of this class are cloneable with this method.

Usage:

LearnerXgboost\$clone(deep = FALSE)

Arguments:

binary classification

deep Whether to make a deep clone.
