2 use\_gotop

```
{\tt html\_dependencies\_gotop} \\ gotop \ dependencies
```

#### Description

Get gotop html dependencies.

#### Usage

```
html_dependencies_gotop(use_cdn = TRUE)
```

#### Arguments

use\_cdn

boolean. TRUE to use a Content Delivery Network (CDN), true by default, or false to use locally stored files.

 ${\tt use\_gotop}$ 

Add scroll up icon

#### Description

Add scroll up icon

### Usage

```
use_gotop(
 src = "fas fa-chevron-up",
 width = 45,
  opacity = 0.5,
 place = "right",
  color = "",
  appear = 200,
  scrolltime = 800,
  fadein = 500,
  fadeout = 500,
 marginX = 2,
 marginY = 2,
  container = "",
 zIndex = 9,
  use\_cdn = TRUE
)
```

use\_gotop 3

## Arguments

width An integer. The width of the gotop icon.  opacity decimal Sets the transparency level for the gotop icon, where 1 is not transparent at all, 0.5 is 50 percent see-through and 0 is completely transparent.  place A string. The location where the gotop icon will be shown. Valid values are 'right' or 'left'.  color A string. The color of the selected the gotop icon.  appear An integer. The amount of pixels the page must be scrolled down before the gotop icon is displayed.  scrolltime An integer. A number determining how long the animation will run when scrolling to the top of the page.  fadein An integer. A number determining how long the animation will run when fading in to opaque.  fadeout An integer. A number determining how long the animation will run when fading out to transparent.  marginX An integer. The percentage amount indicating how far away the gotop icon is from the bottom, left, or right, depending on the value of place.  marginY An integer. The percentage amount indicating how far away the gotop icon is from the top or bottom, depending on the value of place.  container A string. The HTML element to which the scroll function will be attached. If no value is given, then the scroll function will be attached to the window.  zIndex An integer. The z-index value.  use_cdn boolean. TRUE to use a Content Delivery Network (CDN), true by default, or false to use locally stored files.	src	A string. The CSS classes used to display the gotop icon.
at all, 0.5 is 50 percent see-through and 0 is completely transparent.  Place A string. The location where the gotop icon will be shown. Valid values are 'right' or 'left'.  color A string. The color of the selected the gotop icon.  appear An integer. The amount of pixels the page must be scrolled down before the gotop icon is displayed.  scrolltime An integer. A number determining how long the animation will run when scrolling to the top of the page.  fadein An integer. A number determining how long the animation will run when fading in to opaque.  fadeout An integer. A number determining how long the animation will run when fading out to transparent.  marginX An integer. The percentage amount indicating how far away the gotop icon is from the bottom, left, or right, depending on the value of place.  marginY An integer. The percentage amount indicating how far away the gotop icon is from the top or bottom, depending on the value of place.  container A string. The HTML element to which the scroll function will be attached. If no value is given, then the scroll function will be attached to the window.  zIndex An integer. The z-index value.  use_cdn boolean. TRUE to use a Content Delivery Network (CDN), true by default, or	width	An integer. The width of the gotop icon.
right' or 'left'.  color A string. The color of the selected the gotop icon.  appear An integer. The amount of pixels the page must be scrolled down before the gotop icon is displayed.  scrolltime An integer. A number determining how long the animation will run when scrolling to the top of the page.  fadein An integer. A number determining how long the animation will run when fading in to opaque.  fadeout An integer. A number determining how long the animation will run when fading out to transparent.  marginX An integer. The percentage amount indicating how far away the gotop icon is from the bottom, left, or right, depending on the value of place.  marginY An integer. The percentage amount indicating how far away the gotop icon is from the top or bottom, depending on the value of place.  container A string. The HTML element to which the scroll function will be attached. If no value is given, then the scroll function will be attached to the window.  zIndex An integer. The z-index value.  use_cdn boolean. TRUE to use a Content Delivery Network (CDN), true by default, or	opacity	
An integer. The amount of pixels the page must be scrolled down before the gotop icon is displayed.  Scrolltime An integer. A number determining how long the animation will run when scrolling to the top of the page.  fadein An integer. A number determining how long the animation will run when fading in to opaque.  fadeout An integer. A number determining how long the animation will run when fading out to transparent.  marginX An integer. The percentage amount indicating how far away the gotop icon is from the bottom, left, or right, depending on the value of place.  marginY An integer. The percentage amount indicating how far away the gotop icon is from the top or bottom, depending on the value of place.  container A string. The HTML element to which the scroll function will be attached. If no value is given, then the scroll function will be attached to the window.  zIndex An integer. The z-index value.  use_cdn boolean. TRUE to use a Content Delivery Network (CDN), true by default, or	place	• .
gotop icon is displayed.  Scrolltime An integer. A number determining how long the animation will run when scrolling to the top of the page.  fadein An integer. A number determining how long the animation will run when fading in to opaque.  fadeout An integer. A number determining how long the animation will run when fading out to transparent.  marginX An integer. The percentage amount indicating how far away the gotop icon is from the bottom, left, or right, depending on the value of place.  marginY An integer. The percentage amount indicating how far away the gotop icon is from the top or bottom, depending on the value of place.  container A string. The HTML element to which the scroll function will be attached. If no value is given, then the scroll function will be attached to the window.  zIndex An integer. The z-index value.  use_cdn boolean. TRUE to use a Content Delivery Network (CDN), true by default, or	color	A string. The color of the selected the gotop icon.
fadein An integer. A number determining how long the animation will run when fading in to opaque.  fadeout An integer. A number determining how long the animation will run when fading out to transparent.  marginX An integer. The percentage amount indicating how far away the gotop icon is from the bottom, left, or right, depending on the value of place.  marginY An integer. The percentage amount indicating how far away the gotop icon is from the top or bottom, depending on the value of place.  container A string. The HTML element to which the scroll function will be attached. If no value is given, then the scroll function will be attached to the window.  zIndex An integer. The z-index value.  use_cdn boolean. TRUE to use a Content Delivery Network (CDN), true by default, or	appear	
in to opaque.  An integer. A number determining how long the animation will run when fading out to transparent.  MarginX An integer. The percentage amount indicating how far away the gotop icon is from the bottom, left, or right, depending on the value of place.  MarginY An integer. The percentage amount indicating how far away the gotop icon is from the top or bottom, depending on the value of place.  Container A string. The HTML element to which the scroll function will be attached. If no value is given, then the scroll function will be attched to the window.  ZIndex An integer. The z-index value.  use_cdn boolean. TRUE to use a Content Delivery Network (CDN), true by default, or	scrolltime	· · · · · · · · · · · · · · · · · · ·
out to transparent.  MarginX An integer. The percentage amount indicating how far away the gotop icon is from the bottom, left, or right, depending on the value of place.  MarginY An integer. The percentage amount indicating how far away the gotop icon is from the top or bottom, depending on the value of place.  Container A string. The HTML element to which the scroll function will be attached. If no value is given, then the scroll function will be attched to the window.  ZIndex An integer. The z-index value.  use_cdn boolean. TRUE to use a Content Delivery Network (CDN), true by default, or	fadein	
from the bottom, left, or right, depending on the value of place.  An integer. The percentage amount indicating how far away the gotop icon is from the top or bottom, depending on the value of place.  container  A string. The HTML element to which the scroll function will be attached. If no value is given, then the scroll function will be attched to the window.  zIndex  An integer. The z-index value.  use_cdn  boolean. TRUE to use a Content Delivery Network (CDN), true by default, or	fadeout	
from the top or bottom, depending on the value of place.  container  A string. The HTML element to which the scroll function will be attached. If no value is given, then the scroll function will be attched to the window.  zIndex  An integer. The z-index value.  use_cdn  boolean. TRUE to use a Content Delivery Network (CDN), true by default, or	marginX	
no value is given, then the scroll function will be attched to the window.  zIndex An integer. The z-index value.  use_cdn boolean. TRUE to use a Content Delivery Network (CDN), true by default, or	marginY	
use_cdn boolean. TRUE to use a Content Delivery Network (CDN), true by default, or	container	
	zIndex	An integer. The z-index value.
	use_cdn	

## Value

Javascript code initializing GoTop with dependencies

## Examples

use\_gotop()

## **Index**

```
html_dependencies_gotop, 2
use_gotop, 2
```
