# Package 'urlshorteneR'

October 12, 2022

```
Title R Wrapper for the 'Bit.ly' and 'Is.gd'/'v.gd' URL Shortening
Description Allows using two URL shortening services, which also provide
      expanding and analytic functions. Specifically developed for 'Bit.ly' (which re-
      quires OAuth 2.0) and 'is.gd' (no API key).
Version 1.5.7
Date 2022-08-20
Maintainer John Malc <cincenko@outlook.com>
Encoding UTF-8
Depends R (>= 4.0)

bitly\_add\_cust\_bitlink

Add Custom Bitlink (Premium)

# Description

Add a Keyword to a Bitlink

## Usage

```
bitly_add_cust_bitlink(
  bitlink_id = NULL,
  custom_bitlink = NULL,
  showRequestURL = FALSE
)
```

# **Arguments**

```
bitlink_id - string

custom_bitlink - A Custom Bitlink made of the domain and keyword

showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

#### **Custom Bitlinks**

Custom Bitlinks have both a branded short domain (BSD) AND a customized backend. For example, bit.ly/bitlinks would not be considered a Custom Bitlink because it does not have a branded short domain. es.pn/2yxklu would not be considered a custom Bitlink because while it has a branded short domain, it doesn't have a customized backhalf. An example of a link that would live in this section is es.pn/SuperBowl

4 bitly\_auth

#### See Also

```
https://dev.bitly.com/api-reference/#addCustomBitlink
```

#### **Examples**

```
## Not run:
bitly_add_cust_bitlink(custom_bitlink = "es.pn/SuperBowl", bitlink_id = "")
## End(Not run)
```

bitly\_app\_details

Retrieve OAuth App

#### **Description**

Retrieve details for the provided OAuth App client ID

#### Usage

```
bitly_app_details(
  client_id = "be03aead58f23bc1aee6e1d7b7a1d99d62f0ede8",
  showRequestURL = F
)
```

# Arguments

```
client_id - The client ID of an OAuth app
showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

bitly\_auth

Assign bit.ly API tokens using OAuth2.0

#### **Description**

There are 2 ways of how you can authenticate using this package.

- 1. The recommended practise for the end-user of this package is to use default API keys which are provided using this method.
- 2. Alternatively, you can register your own application via the web in order to get Client ID and Client Secret code.

For that go first to https://app.bitly.com/settings/integrations/. Click REGISTERED OAUTH APPLICATIONS, then REGISTER NEW APPLICATION followed by GET REGISTRATION CODE. Open your email that you will receive and click COMPLETE REGISTRATION. Make up an APPLICATION NAME that is unique. Unless you know to do otherwise, type "http://localhost:1410/" (slash at the end is important) in REDIRECT URIS. For APPLICATION LINK and APPLICATION DESCRIPTION you can type whatever you like.

bitly\_auth 5

#### Usage

```
bitly_auth(
   key = "be03aead58f23bc1aee6e1d7b7a1d99d62f0ede8",
   secret = "f9c6a3b18968e991e35f466e90c7d883cc176073",
   debug = F,
   token
)
```

## **Arguments**

key - Client ID
 secret - Client Secret
 debug - whether to print additional debug messages
 token - a Token object or a file path to an rds file containing a token.

# **However Important Information**

Before choosing registering new application yourself, you can try using my API keys (the default option). No worries, no information is exposed to me at all: neither what you shorten nor who does it, etc. In fact, quote: "If you are shortening URLs on behalf of end-users, we ask that you use our OAuth 2 implementation to authenticate end-users before shortening. URLs shortened in this manner will be added to the specified end-user's history, allowing the end-user to manage and track the shortened URLs".

#### WARNING

If using RStudio in the browsers via RStudio Server, then authentication may not work well. In such case, use desktop RStudio application. Look for help at <a href="https://support.rstudio.com/">https://support.rstudio.com/</a>>.

#### See Also

See https://dev.bitly.com/api-reference

```
## Not run:
# overwrite keys - Variant 2
bitly_token <-
    bitly_auth(
        key = "be03aead58f23bc1aee6e1d7b7a1d99d62f0ede8",
        secret = "f9c6a3b18968e991e35f466e90c7d883cc176073"
)

# default variant
bitly_token <- bitly_auth()
saveRDS(bitly_token, "bitly_token.rds")
# for non-interactive use:
bitly_auth(token = "bitly_token.rds")</pre>
```

6 bitly\_bsds\_overrides

```
## End(Not run)
```

bitly\_bsds

Fetch all Branded Short Domains

# Description

BSDs is an acronym for branded short domains. This is a custom 15 character or less domain for bitlinks. This allows you to customize the domain to your brand.

# Usage

```
bitly_bsds(showRequestURL = F)
```

#### **Arguments**

showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.

#### See Also

```
https://dev.bitly.com/api-reference/#getBSDs
```

# **Description**

Retrieves all account overrides matching specified group\_guid and bsd query filters.

#### Usage

```
bitly_bsds_overrides(group_id = NA, showRequestURL = F)
```

# **Arguments**

```
group_id - a required string | A GUID for a Bitly group
showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

#### See Also

```
https://dev.bitly.com/api-reference/#getOverridesForGroups
```

7 bitly\_create\_bitlink

#### **Examples**

```
## Not run:
ui <- bitly_user_info(showRequestURL = TRUE)</pre>
bsds_over <- bitly_bsds_overrides(group_id = ui$default_group_guid[1])</pre>
## End(Not run)
```

bitly\_create\_bitlink Create a short Bitlink

# **Description**

See https://dev.bitly.com/docs/getting-started/rate-limits and https://dev.bitly. com/api-reference/#createFullBitlink Convert a long url to a Bitlink and set additional parameters.

# Usage

```
bitly_create_bitlink(
  long_url = NULL,
  domain = "bit.ly",
  title = NULL,
  tags = NULL,
  group_guid = NULL,
 deeplinks_list = list(app_uri_path = NULL, install_type = NULL, install_url = NULL,
    app_id = NULL),
  showRequestURL = FALSE
)
```

#### **Arguments**

- required, a long URL to be shortened (example: https://www.idnes.cz). Must long\_url contain http/https domain

- (optional) the short domain to use; either bit.ly, j.mp, or bitly.com or a custom

short domain. The default for this parameter is the short domain selected by each user in their bitly account settings. Passing a specific domain via this parameter

will override the default settings.

title - title of the bitlink

- Array of string, use e.g. c("test1", "test2") tags

- a GUID for a Bitly group group\_guid

deeplinks\_list - a list containing parameters below

showRequestURL - show URL which has been build and requested from server. For debug pur-

poses.

app\_uri\_path - app\_uri\_path

```
install_type - install_type
install_url - install_url
app_id - app_id
```

#### Value

id - a short bitly identifier for long\_url which is unique to the given account.

long\_url - This may not always be equal to the URL requested, as some URL normalization may occur (e.g., due to encoding differences, or case differences in the domain). This long\_url will always be functionally identical the the request parameter.

link - an bitly id with http(s) prefix

#### Note

Look in the vignette for bulk shortening of URLs. Each call of this function == 1 API call. Take that into consideration due to limits etc.

The bitly API does not support shortening more than one long URL with a single API call. Meaning 1 Long URL = 1 Function call.

Long URLs should be URL-encoded. You can not include a longUrl in the request that has &, ?, #, or other reserved parameters without first encoding it.

The default value for the domain parameter is selected by each user from within their bitly account settings at <a href="https://app.bitly.com/settings/api/">https://app.bitly.com/settings/api/</a>.

Long URLs should not contain spaces: any longUrl with spaces will be rejected. All spaces should be either percent encoded spaces are all indications of errors. Please remember to strip leading and trailing whitespace from any user input before shortening.

# **Examples**

```
## Not run:
bitly_create_bitlink(long_url = "http://slovnik.seznam.cz/")
## End(Not run)
```

```
bitly_create_campaigns
```

Create Campaign (Premium)

#### Description

Create a new campaign

bitly\_create\_channel 9

#### Usage

```
bitly_create_campaigns(
  group_guid = NULL,
  channel_guids = NULL,
  description = NULL,
  name = NULL,
  showRequestURL = T
)
```

# Arguments

```
group_guid - a GUID for a Bitly group

channel_guids - a list of strings

description - description of campaign

name - its name

showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

# **Campaigns**

Bitly Campaigns allows you to build and manage omnichannel campaigns.

#### See Also

```
https://dev.bitly.com/api-reference/#createCampaign
```

# **Examples**

```
## Not run:
cc <- bitly_create_campaigns(
   group_guid = "testing", showRequestURL = TRUE, channel_guids = list("1", "2", "3"),
   description = "description", name = "name"
)
## End(Not run)</pre>
```

bitly\_create\_channel Create channel (Premium)

#### **Description**

Create a new channel

bitly\_create\_channel

#### Usage

```
bitly_create_channel(
   group_guid = NULL,
   guid = NULL,
   name = NULL,
   modified = NULL,
   created = NULL,
   campaign_guid = NULL,
   bitlink_id = NULL,
   showRequestURL = T
)
```

# Arguments

```
group_guid
                 - a GUID for a Bitly group
                 - ID for a channel
guid
name
                 - its name
modified
                 - string | ISO_TIMESTAMP
                 - string | ISO TIMESTAMP
created
campaign_guid
                 - string | A GUID for a Bitly campaign
bitlink_id
                 - string
showRequestURL - an optional T/F value to whether show URL which has been build and re-
                 quested from server. For debug purposes, default FALSE.
```

# **Campaigns**

Bitly Campaigns allows you to build and manage omnichannel campaigns.

#### See Also

```
https://dev.bitly.com/api-reference/#createChannel
```

```
## Not run:
    gc <- bitly_create_channel(group_guid = "testing", ...)
## End(Not run)</pre>
```

bitly\_expand\_link 11

bitly\_expand\_link

Expand a Bitlink

#### Description

See https://dev.bitly.com/api-reference/#expandBitlink This endpoint returns public information for a Bitlink.

#### Usage

```
bitly_expand_link(bitlink_id = NULL, showRequestURL = FALSE)
```

# **Arguments**

```
bitlink_id - string
showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

#### Value

long\_url - a full URL to which bitlink points to

# **Examples**

```
## Not run:
bitly_expand_link(bitlink_id = "bit.ly/DPetrov")
bitly_expand_link(bitlink_id = "on.natgeo.com/1bEVhwE")

## manyHashes <- list("bit.ly/DPetrov", "bit.ly/1QU8CFm", "bit.ly/1R1LPSE", "bit.ly/1LNqqva")

## for (u in 1:length(manyHashes)) {

## print(bitly_expand_link(bitlink_id = manyHashes[[u]], showRequestURL = TRUE))

## }

## End(Not run)</pre>
```

bitly\_rate\_limits

bitly\_rate\_limits

# **Description**

Provides bit.ly rate limits by endpoint. See https://dev.bitly.com/api-reference/#getPlatformLimitss

# Usage

```
bitly_rate_limits(showRequestURL = F)
```

#### **Arguments**

showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.

#### Value

data. frame of end points and their rate limits by action

```
bitly_retrieve_bitlink
```

Retrieve a Bitlink

# **Description**

This endpoint returns information for a Bitlink.

# Usage

```
bitly_retrieve_bitlink(bitlink = NULL, showRequestURL = FALSE)
```

# **Arguments**

```
bitlink - required, a Bitlink made of the domain and hash
```

showRequestURL - an optional T/F value to whether show URL which has been build and re-

quested from server. For debug purposes, default FALSE.

### See Also

```
See https://dev.bitly.com/api-reference/#getBitlink
```

```
## Not run:
bitly_retrieve_bitlink(bitlink = "cnn.it/2HomWGB")
## End(Not run)
```

```
bitly_retrieve_bitlinks_by_groups

*Retrieve Bitlinks by Group*
```

## **Description**

See https://dev.bitly.com/api-reference/#getBitlinksByGroup Retrieve a paginated collection of Bitlinks for a Group

## Usage

```
bitly_retrieve_bitlinks_by_groups(
  group_guid = NULL,
  size = 50,
 page = 1,
  showRequestURL = FALSE,
  keyword = NULL,
  query_q = NULL,
  created_before = NULL,
  created_after = NULL,
 modified_after = NULL,
  archived = "both",
  deeplinks = "both"
  campaign_guid = NULL,
  channel_guid = NULL,
  custom_bitlink = "both",
  tags = NULL,
  encoding_login = NULL,
 domain_deeplinks = "both"
)
```

- a GUID for a Bitly group

# Arguments

group\_guid

- The quantity of items to be be returned

- Default: 1 | Integer specifying the numbered result at which to start

- show URL which has been build and requested from server. For debug purposes.

- Custom keyword to filter on history entries

- a query to look for in bitlinks; acts a filter

- Timestamp as an integer unix epoch

- Timestamp as an integer unix epoch

- Timestamp as an integer unix epoch, see as\_datetime or anytime's as\_datetime

 $\hbox{archived} \qquad \hbox{- string | Default: "off" | Enum:"on" "off" "both" | Whether or not to include}$ 

archived bitlinks

deeplinks - string | Default: "both" | Enum:"on" "off" "both" | Filter to only Bitlinks that

contain deeplinks

campaign\_guid - string | A GUID for a Bitly campaign

channel\_guid - Filter to return only links for the given channel GUID, can be provided, over-

rides all other parameters

custom\_bitlink - string | Default: "both" | Enum:"on" "off" "both"

tags - Array of string, use e.g. c("test1", "test2")

encoding\_login - Array of string | Filter by the login of the authenticated user that created the

Bitlink

domain\_deeplinks

- string | Default: "both" | Enum: "on" "off" "both" | Filter to only Bitlinks that

contain deeplinks configured with a custom domain

## **Examples**

```
## Not run:
bitly_retrieve_bitlinks_by_groups(group_guid = "bit.ly/DPetrov", keyword = "novy titulek")
## End(Not run)
```

bitly\_retrieve\_campaign

Retrieve a Campaign

#### **Description**

Retrive details for a campaign

## Usage

```
bitly_retrieve_campaign(campaign_guid = NULL, showRequestURL = T)
```

#### **Arguments**

campaign\_guid - string | A GUID for a Bitly campaign

showRequestURL - an optional T/F value to whether show URL which has been build and re-

quested from server. For debug purposes, default FALSE.

#### **Campaigns**

Bitly Campaigns allows you to build and manage omnichannel campaigns.

#### See Also

https://dev.bitly.com/api-reference/#getCampaign

```
## Not run:
    gc <- bitly_retrieve_campaign(campaign_guid = "testing")
## End(Not run)</pre>
```

```
bitly_retrieve_campaigns
```

Retrieve campaigns (Premium)

#### **Description**

Retrieve the campaigns for the current user

# Usage

```
bitly_retrieve_campaigns(group_guid = NULL, showRequestURL = T)
```

# **Arguments**

```
group_guid - a GUID for a Bitly group
showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

# **Campaigns**

Bitly Campaigns allows you to build and manage omnichannel campaigns.

# See Also

```
https://dev.bitly.com/api-reference/#getCampaigns
```

```
## Not run:
    gc <- bitly_retrieve_campaigns(group_guid = "testing")
## End(Not run)</pre>
```

```
bitly_retrieve_channel
```

Get a Channel (Premium)

# Description

Get a channel's details

#### Usage

```
bitly_retrieve_channel(channel_guid = NULL, showRequestURL = T)
```

# Arguments

```
channel_guid - GUID of a target channel
```

showRequestURL - an optional T/F value to whether show URL which has been build and re-

quested from server. For debug purposes, default FALSE.

# **Campaigns**

Bitly Campaigns allows you to build and manage omnichannel campaigns.

# See Also

```
https://dev.bitly.com/api-reference/#getChannel
```

#### **Examples**

```
## Not run:
    gc <- bitly_retrieve_channel(channel_guid = "testing")
## End(Not run)</pre>
```

```
bitly_retrieve_channels
```

Retrieve channels (Premium)

#### **Description**

Retrieve the channels available to a user

bitly\_retrieve\_clicks 17

#### Usage

```
bitly_retrieve_channels(
  group_guid = NULL,
  campaign_guid = NULL,
  showRequestURL = T
)
```

# **Arguments**

```
group_guid - a GUID for a Bitly group
campaign_guid - string | A GUID for a Bitly campaign
showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

#### **Campaigns**

Bitly Campaigns allows you to build and manage omnichannel campaigns.

#### See Also

```
https://dev.bitly.com/api-reference/#getChannels
```

#### **Examples**

```
## Not run:
    gc <- bitly_retrieve_channels(group_guid = "testing", campaign_guid = "test")
## End(Not run)</pre>
```

```
bitly_retrieve_clicks Get Clicks for a Bitlink
```

#### **Description**

See https://dev.bitly.com/api-reference/#getClicksForBitlink This will return the click counts for a specified Bitlink. This returns an array with clicks based on a date.

# Usage

```
bitly_retrieve_clicks(
  bitlink = NULL,
  size = 50,
  unit_reference = NULL,
  unit = NULL,
  units = -1,
  showRequestURL = FALSE
)
```

#### **Arguments**

bitlink - required, a Bitlink made of the domain and hash

size - The quantity of items to be be returned

unit\_reference - string | An ISO-8601 timestamp, indicating the most recent time for which to

pull metrics. Will default to current time.

unit - A unit of time

units - An integer representing the time units to query data for. pass -1 to return all

units of time.

showRequestURL - show URL which has been build and requested from server. For debug pur-

poses.

# Examples

```
## Not run:
bitly_retrieve_clicks(bitlink = "cnn.it/2HomWGB", unit = "day", units = -1, size = 100)
## End(Not run)
```

bitly\_retrieve\_clicks\_summary

Get Clicks Summary for a Bitlink

# Description

See https://dev.bitly.com/api-reference/#getClicksSummaryForBitlink This will return the click counts for a specified Bitlink. This rolls up all the data into a single field of clicks.

#### Usage

```
bitly_retrieve_clicks_summary(
  bitlink = NULL,
  size = 50,
  unit_reference = NULL,
  unit = NULL,
  units = -1,
  showRequestURL = FALSE
)
```

# **Arguments**

bitlink - required, a Bitlink made of the domain and hash

size - The quantity of items to be be returned

unit\_reference - string | An ISO-8601 timestamp, indicating the most recent time for which to

pull metrics. Will default to current time.

unit - A unit of time

units  $\,$  - An integer representing the time units to query data for. pass -1 to return all

units of time.

showRequestURL - show URL which has been build and requested from server. For debug pur-

poses.

# **Examples**

```
## Not run:
bitly_retrieve_clicks_summary(bitlink = "cnn.it/2HomWGB", unit = "day", units = -1, size = 100)
## End(Not run)
bitly_retrieve_cust_bitlink
```

# **Description**

Retrieve the details and history of a Custom Bitlink

# Usage

```
bitly_retrieve_cust_bitlink(custom_bitlink = NULL, showRequestURL = FALSE)
```

Retrieve Custom Bitlink (Premium)

# **Arguments**

```
    custom_bitlink - A Custom Bitlink made of the domain and keyword
    showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

# See Also

```
https://dev.bitly.com/api-reference/#getCustomBitlink
```

```
## Not run:
bitly_retrieve_cust_bitlink(custom_bitlink = "es.pn/SuperBowl")
## End(Not run)
```

```
bitly\_retrieve\_cust\_bitlink\_clicks\_history\\ Get\ Clicks\ for\ a\ Custom\ Bitlink's\ Entire\ History\ (Premium)
```

# Description

Returns the click counts for the specified link. This returns an array with clicks based on a date.

# Usage

```
bitly_retrieve_cust_bitlink_clicks_history(
  custom_bitlink = NULL,
  showRequestURL = FALSE
)
```

## **Arguments**

```
    custom_bitlink - A Custom Bitlink made of the domain and keyword
    showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

#### See Also

https://dev.bitly.com/api-reference/#getClicksForCustomBitlink

# **Examples**

```
## Not run:
bitly_retrieve_cust_bitlink_clicks_history(custom_bitlink = "es.pn/SuperBowl")
## End(Not run)
```

```
bitly_retrieve_cust_bitlink_metrics_destination

Get Metrics for a Custom Bitlink by Destination (Premium)
```

# Description

Returns click metrics for the specified link by its historical destinations.

#### Usage

```
bitly_retrieve_cust_bitlink_metrics_destination(
  custom_bitlink = NULL,
  showRequestURL = FALSE
)
```

#### **Arguments**

```
custom_bitlink - A Custom Bitlink made of the domain and keyword showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

# See Also

```
https://dev.bitly.com/api-reference/#getCustomBitlinkMetricsByDestination
```

# **Examples**

```
## Not run:
bitly_retrieve_cust_bitlink_metrics_destination(custom_bitlink = "es.pn/SuperBowl")
## End(Not run)
```

```
bitly_retrieve_destination_metrics
```

Get Metrics for a Custom Bitlink by destination (Premium)

#### Description

Get Click Metrics for a Custom Bitlink by historical Bitlink destinations

#### Usage

```
bitly_retrieve_destination_metrics(
  custom_bitlink = NULL,
  showRequestURL = FALSE
)
```

# **Arguments**

```
    custom_bitlink - A Custom Bitlink made of the domain and keyword
    showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

#### See Also

https://dev.bitly.com/api-reference/#getCustomBitlinkMetricsByDestination

```
## Not run:
bitly_retrieve_destination_metrics(custom_bitlink = "es.pn/SuperBowl")
## End(Not run)
```

22 bitly\_retrieve\_groups

```
bitly_retrieve_group Retrieve a single group
```

# **Description**

Retrive details for a specific group that a user belongs to.

# Usage

```
bitly_retrieve_group(group_id = NA, showRequestURL = F)
```

# **Arguments**

```
group_id - a required string | A GUID for a Bitly group
showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

## Group

Groups are a subdivision within an organization. A user will belong to a group within an organization. Most actions on our API will be on behalf of a group. For example, when you shorten a link, it will be on behalf of a user and a group.

#### See Also

```
https://dev.bitly.com/api-reference#getGroup
```

# **Examples**

```
## Not run:
ui <- bitly_user_info(showRequestURL = TRUE)
rg <- bitly_retrieve_group(group_guid = ui$default_group_guid)
## End(Not run)</pre>
```

bitly\_retrieve\_groups Retrieve a list of all groups

#### **Description**

Retrive details for all groups that a user belongs to.

#### Usage

```
bitly_retrieve_groups(organization_id = NULL, showRequestURL = F)
```

#### **Arguments**

```
organization_id
- an optional string parameter | A GUID for a Bitly organization
showRequestURL
- an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

#### Group

Groups are a subdivision within an organization. A user will belong to a group within an organization. Most actions on our API will be on behalf of a group. For example, when you shorten a link, it will be on behalf of a user and a group.

#### See Also

```

# **Examples**

```
## Not run:
rg <- bitly_retrieve_groups("") # will still work ok
## End(Not run)</pre>
```

```
bitly_retrieve_group_click_metrics_by_cities

Get Click Metrics for a specified group by city (Premium)
```

#### **Description**

Returns the geographic origins of click traffic by city for the specified group. Requires a premium account.

# Usage

```
bitly_retrieve_group_click_metrics_by_cities(group_id = NA, showRequestURL = F)
```

# **Arguments**

```
    group_id - a required string | A GUID for a Bitly group
    showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

#### Group

Groups are a subdivision within an organization. A user will belong to a group within an organization. Most actions on our API will be on behalf of a group. For example, when you shorten a link, it will be on behalf of a user and a group.

#### See Also

https://dev.bitly.com/api-reference/#getGroupMetricsByCities

#### **Examples**

# Description

This endpoint will return metrics about the countries referring click traffic rolled up to a Group

#### Usage

```
bitly_retrieve_group_click_metrics_by_countries(
  group_id = NA,
  showRequestURL = F
)
```

#### **Arguments**

```
    group_id - a required string | A GUID for a Bitly group
    showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

```

```
bitly_retrieve_links_grouped

*Retrieve Bitlinks by Group
```

# **Description**

Retrieve a paginated collection of Bitlinks for a Group

# Usage

```
bitly_retrieve_links_grouped(
   group_id = NA,
   keyword = NULL,
   search_query = NULL,
   created_before = NULL,
   created_after = NULL,
   modified_after = NULL,
   archived = "off",
   deeplinks = "both",
   domain_deeplinks = "both",
   campaign_guid = NULL,
   channel_guid = NULL,
   custom_bitlink = "both",
   tags = NULL,
```

```
encoding_login = NULL,
page = 1,
size = 50,
showRequestURL = F
)
```

#### **Arguments**

group\_id - a required string | A GUID for a Bitly group keyword - Custom keyword to filter on history entries search\_query - string I the value that you would like to search created\_before - Timestamp as an integer unix epoch created\_after - Timestamp as an integer unix epoch modified\_after - Timestamp as an integer unix epoch, see as\_datetime or anytime's as\_datetime archived - string | Default: "off" | Enum: "on" "off" "both" | Whether or not to include archived bitlinks - string | Default: "both" | Enum: "on" "off" "both" | Filter to only Bitlinks that deeplinks contain deeplinks domain\_deeplinks - string | Default: "both" | Enum: "on" "off" "both" | Filter to only Bitlinks that contain deeplinks configured with a custom domain campaign\_guid - Filter to return only links for the given campaign GUID, can be provided channel\_guid - Filter to return only links for the given channel GUID, can be provided, overrides all other parameters custom\_bitlink - string | Default: "both" | Enum: "on" "off" "both" tags - Array of string | filter by given tags encoding\_login - Array of string | Filter by the login of the authenticated user that created the Bitlink page - Default: 1 | Integer specifying the numbered result at which to start - string | Default: 50 | The quantity of items to be be returned size showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.

#### Group

Groups are a subdivision within an organization. A user will belong to a group within an organization. Most actions on our API will be on behalf of a group. For example, when you shorten a link, it will be on behalf of a user and a group.

```

```
bitly_retrieve_metrics_by_countries

Get Metrics for a Bitlink by countries
```

# **Description**

This endpoint will return metrics about the countries referring click traffic to a single Bitlink.

# Usage

```
bitly_retrieve_metrics_by_countries(
  bitlink = NULL,
  size = 100,
  unit = NULL,
  unit_reference = NULL,
  units = -1,
  showRequestURL = FALSE
)
```

# Arguments

bitlink - required, a Bitlink made of the domain and hash

size - The quantity of items to be be returned

unit - A unit of time

unit\_reference - string | An ISO-8601 timestamp, indicating the most recent time for which to pull metrics. Will default to current time.

units - An integer representing the time units to query data for. pass -1 to return all units of time.

showRequestURL - show URL which has been build and requested from server. For debug purposes.

#### See Also

size = 100)
## End(Not run)
```

```
bitly_retrieve_metrics_by_referrers

Get Metrics for a Bitlink by referrers
```

# **Description**

This endpoint will return metrics about the referrers referring click traffic to a single Bitlink.

#### Usage

```
bitly_retrieve_metrics_by_referrers(
  bitlink = NULL,
  size = 100,
  unit = NULL,
  unit_reference = NULL,
  units = -1,
  showRequestURL = FALSE
)
```

# Arguments

bitlink - required, a Bitlink made of the domain and hash

size - The quantity of items to be be returned

unit - A unit of time

unit\_reference - string | An ISO-8601 timestamp, indicating the most recent time for which to pull metrics. Will default to current time.

units - An integer representing the time units to query data for. pass -1 to return all units of time.

```

```
bitly_retrieve_metrics_by_referrers_by_domain

Get Metrics for a Bitlink by referrers by domain
```

#### **Description**

This endpoint will group referrers metrics about a single Bitlink.

# Usage

```
bitly_retrieve_metrics_by_referrers_by_domain(
  bitlink = NULL,
  size = 50,
  unit_reference = NULL,
  unit = NULL,
  units = -1,
  showRequestURL = FALSE
)
```

# **Arguments**

bitlink - required, a Bitlink made of the domain and hash

size - string | Default: 50 | The quantity of items to be be returned

unit\_reference - string | An ISO-8601 timestamp, indicating the most recent time for which to pull metrics. Will default to current time.

unit - string | Default: "day", Enum: "minute" "hour" "day" "week" "month" | A unit of time

units - integer | Default: -1 | An integer representing the time units to query data for. pass -1 to return all units of time.

showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.

bitly\_retrieve\_org

Retrieve a single Organization

# **Description**

Retrive details for the specified organization.

# Usage

```
bitly_retrieve_org(organization_id = NULL)
```

# **Arguments**

```
organization_id
- a required string | A GUID for a Bitly organization. You may also simply pass
"" (double quotes), but this should be avoided at all costs.
```

# **Organizations**

Organizations are part of our hierarchy. This is the top level where a group and user will belong.

# See Also

df_org_short_counts <- data.frame(osc, stringsAsFactors = FALSE)
## End(Not run)</pre>
```

```
bitly_retrieve_sorted_bitlinks_by_groups

*Retrieve Sorted Bitlinks for Group*
```

## **Description**

See https://dev.bitly.com/api-reference/#getSortedBitlinks This will retrieve a paginated response for Bitlinks that are sorted for the Group

## Usage

```
bitly_retrieve_sorted_bitlinks_by_groups(
  group_guid = NULL,
  unit = "day",
  units = -1,
  sort = "clicks",
  size = 50,
  unit_reference = NULL,
  showRequestURL = FALSE
)
```

#### **Arguments**

group\_guid - a GUID for a Bitly group
 unit - A unit of time
 units - An integer representing the time units to query data for. pass -1 to return all units of time.
 sort - required, Enum: "clicks" - The type of sorting that you would like to do
 size - The quantity of items to be be returned
 unit\_reference - string | An ISO-8601 timestamp, indicating the most recent time for which to pull metrics. Will default to current time.
 showRequestURL - show URL which has been build and requested from server. For debug purposes.

## **Examples**

```
## Not run:
bitly_retrieve_sorted_bitlinks_by_groups(group_guid = "", sort = "clicks")
## End(Not run)
```

bitly\_retrieve\_sorted\_links

Retrieve Sorted Bitlinks for Group

# **Description**

This will retrieve a paginated response for Bitlinks that are sorted for the Group. This method returns a combined object which end-user (you) have to further process for your needs.

# Usage

```
bitly_retrieve_sorted_links(
  group_id = NA,
  to_sort_by = "clicks",
  unit = "day",
  units = -1,
  unit_reference = NULL,
  size = 50,
  showRequestURL = F
)
```

## **Arguments**

group\_id - a required string | A GUID for a Bitly group
 - a required string | Enum: "clicks" | The type of sorting that you would like to do
 unit - string | Default: "day", Enum: "minute" "hour" "day" "week" "month" | A unit of time
 units - integer | Default: -1 | An integer representing the time units to query data for. pass -1 to return all units of time.
 unit\_reference - string | An ISO-8601 timestamp, indicating the most recent time for which to pull metrics. Will default to current time.
 size - string | Default: 50 | The quantity of items to be be returned
 showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.

## Group

Groups are a subdivision within an organization. A user will belong to a group within an organization. Most actions on our API will be on behalf of a group. For example, when you shorten a link, it will be on behalf of a user and a group.

38 bitly\_retrieve\_tags

## See Also

## End(Not run)</pre>
```

39 bitly\_shorten\_link

```
bitly_shorten_link
```

Shorten a Link

## **Description**

See https://dev.bitly.com/api-reference/#createBitlink Convert a long url to a Bitlink

# Usage

```
bitly_shorten_link(
  domain = "bit.ly",
  group_guid = NULL,
  long_url = NULL,
  showRequestURL = FALSE
)
```

## **Arguments**

domain

- (optional) the short domain to use; either bit.ly, j.mp, or bitly.com or a custom short domain. The default for this parameter is the short domain selected by each user in their bitly account settings. Passing a specific domain via this parameter will override the default settings.

group\_guid

- a GUID for a Bitly group

long\_url

- required, a long URL to be shortened (example: https://www.idnes.cz). Must

contain http/https

showRequestURL - show URL which has been build and requested from server. For debug pur-

```
## Not run:
bitly_shorten_link(url = "http://www.seznam.cz/")
bitly_shorten_link(url = "http://www.seznam.cz/", showRequestURL = TRUE)
manyUrls <- list(</pre>
  "http://www.seznam.cz/", "http://www.seznamasdas.cz/",
  "http://www.seznam.cz/asadasd", "http://www.seznam.cz/adqwrewtregt"
)
for (u in 1:length(manyUrls)) {
 print(bitly_shorten_link(long_url = manyUrls[[u]], showRequestURL = TRUE))
}
## End(Not run)
```

40 bitly\_update\_bitlink

```
bitly_update_bitlink
                      Update a Bitlink
```

## **Description**

See https://dev.bitly.com/api-reference/#updateBitlink Update fields in the Bitlink

# Usage

```
bitly_update_bitlink(
  bitlink = NULL,
  archived = NULL,
  tags = NULL,
  showRequestURL = FALSE,
  created_at = NULL,
  title = NULL,
  created_by = NULL,
  long_url = NULL,
  client_id = NULL,
  custom_bitlinks = NULL,
  link = NULL,
  id = NULL,
 deeplinks = list(bitlink = NULL, install_url = NULL, created = NULL, modified = NULL,
  app_uri_path = NULL, install_type = NULL, app_guid = NULL, guid = NULL, os = NULL)
)
```

# **Arguments**

bitlink - required, a Bitlink made of the domain and hash archived - string | Default: "off" | Enum:"on" "off" "both" | Whether or not to include

archived bitlinks

- Array of string, use e.g. c("test1", "test2") tags

showRequestURL - show URL which has been build and requested from server. For debug pur-

poses.

created\_at - update created at parameter

- title of the bitlink title created\_by - update user

- required, a long URL to be shortened (example: https://www.idnes.cz). Must long\_url

contain http/https

client\_id - The client ID of an OAuth app

custom\_bitlinks

- update custom bitlinks

link - link id

- string | Default: "both" | Enum: "on" "off" "both" | Filter to only Bitlinks that deeplinks

contain deeplinks

## **Examples**

```
## Not run:
bitly_update_bitlink(bitlink = "bit.ly/DPetrov", title = "novy titulek")

## hash is the one which is only returned. Dont use
bitly_update_bitlink(bitlink = "on.natgeo.com/1bEVhwE")

## manyHashes <- list("bit.ly/DPetrov", "bit.ly/1QU8CFm", "bit.ly/1R1LPSE", "bit.ly/1LNqqva")

## for (u in 1:length(manyHashes)) {

## print(bitly_update_bitlink(bitlink = manyHashes[[u]],

## title = stri_rand_strings(1, 8, pattern = "[A-Za-z0-9]")))

## }

## End(Not run)</pre>
```

bitly\_update\_campaign Update A Channel (Premium)

## **Description**

Update an existing Channel

# Usage

```
bitly_update_campaign(
  campaign_guid = NULL,
  group_guid = NULL,
  channel_guids = NULL,
  description = NULL,
  name = NULL,
  showRequestURL = T
)
```

#### **Arguments**

```
campaign_guid - string | A GUID for a Bitly campaign
group_guid - a GUID for a Bitly group
channel_guids - a list of strings
description - description of campaign
name - its name
showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

## **Campaigns**

Bitly Campaigns allows you to build and manage omnichannel campaigns.

## See Also

```
https://dev.bitly.com/api-reference/#updateCampaign
```

## **Examples**

```
## Not run:
cc <- bitly_update_campaign(
  group_guid = "", channel_guids = list("1", "2", "3"),
  description = "description", name = "name"
)
## End(Not run)</pre>
```

# Description

Update an existing Channel

## Usage

```
bitly_update_channel(
  channel_guid = NULL,
  group_guid = NULL,
  guid = NULL,
  name = NULL,
  modified = NULL,
  created = NULL,
  campaign_guid = NULL,
  bitlink_id = NULL,
  showRequestURL = T
)
```

## **Arguments**

```
channel_guid
                 - GUID of a target channel
group_guid
                 - a GUID for a Bitly group
guid
                 - ID for a channel
name
                 - its name
                 - string | ISO_TIMESTAMP
modified
                 - string | ISO TIMESTAMP
created
                 - string | A GUID for a Bitly campaign
campaign_guid
bitlink_id
                 - string
showRequestURL - an optional T/F value to whether show URL which has been build and re-
                 quested from server. For debug purposes, default FALSE.
```

## **Campaigns**

Bitly Campaigns allows you to build and manage omnichannel campaigns.

## See Also

```
https://dev.bitly.com/api-reference/#updateChannel
```

# **Examples**

```
## Not run:
uc <- bitly_update_channel(channel_guid = "testing", group_guid = "", name = "name")
## End(Not run)</pre>
```

```
bitly_update_cust_bitlink
```

Update Custom Bitlink (Premium)

# **Description**

Move a Keyword to a different Bitlink

#### Usage

```
bitly_update_cust_bitlink(
  custom_bitlink = NULL,
  bitlink_id = NULL,
  showRequestURL = FALSE
)
```

#### **Arguments**

```
    custom_bitlink - A Custom Bitlink made of the domain and keyword
    bitlink_id - string
    showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

### See Also

```
https://dev.bitly.com/api-reference/#updateCustomBitlink
```

```
## Not run:
bitly_update_cust_bitlink(custom_bitlink = "es.pn/SuperBowl", bitlink_id = "")
## End(Not run)
```

44 bitly\_update\_group

bitly\_update\_group

Update a Group

# **Description**

Update the details of a group

# Usage

```
bitly_update_group(
  group_id = NA,
  name = NA,
  organization_id = NA,
  showRequestURL = F
)
```

## **Arguments**

```
group_id - a required string | A GUID for a Bitly group

- username to change

organization_id

- an optional string parameter | A GUID for a Bitly organization

showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

## Group

Groups are a subdivision within an organization. A user will belong to a group within an organization. Most actions on our API will be on behalf of a group. For example, when you shorten a link, it will be on behalf of a user and a group.

#### See Also

```
https://dev.bitly.com/api-reference#updateGroup
[bitly_update_user()]
```

```
## Not run:
ui <- bitly_user_info(showRequestURL = TRUE)
up_group <- bitly_update_group(group_id = ui$default_group_guid[1], name = "New Group Name",
organization_id = "asd")
## End(Not run)</pre>
```

```
bitly_update_group_pref
```

Update Group Preferences

# Description

Update preferences for a specific group

# Usage

```
bitly_update_group_pref(group_id = NA, domain_pref = NA, showRequestURL = F)
```

# Arguments

```
    group_id - a required string | A GUID for a Bitly group
    domain_pref - string
    showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

# Group

Groups are a subdivision within an organization. A user will belong to a group within an organization. Most actions on our API will be on behalf of a group. For example, when you shorten a link, it will be on behalf of a user and a group.

## See Also

https://dev.bitly.com/api-reference#updateGroupPreferences
```

```
## Not run:
ui <- bitly_user_info(showRequestURL = TRUE)
group_pref <- bitly_update_group_pref(group_id = ui$default_group_guid[1])
## End(Not run)</pre>
```

46 bitly\_update\_user

bitly\_update\_user

Update your name and/or default group ID

# Description

This will overwrite your (display) username and/or group ID you belong to.

#### Usage

```
bitly_update_user(default_group_guid = NULL, name = "", showRequestURL = FALSE)
```

# **Arguments**

```
default_group_guid
- group id to change, see NOTE

name
- username to change
showRequestURL
- an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.
```

## User

User operations such as changing your name or fetching basic user information apply only to the authenticated user.

#### Note

Applies only to the authenticated user: Changing group/org ID is only permitted to premium users. Thus, if you are a "free" user and will try to change your default group id to something else, you will get an error. In that case, only changing display name is permitted.

#### See Also

```
https://dev.bitly.com/api-reference/#updateUser
```

```
## Not run:
# this applies only for "free" users
uu <- bitly_update_user(name = "Malc")

# if you are premium user, you can additionally adjust your group id
uug <- bitly_update_user(name = "Malc", default_group_guid = "TestGroupID")
## End(Not run)</pre>
```

bitly\_user\_info 47

bitly\_user\_info

Retrieve information for the current authenticated user

## **Description**

Retrieve information for the current authenticated user

# Usage

```
bitly_user_info(showRequestURL = FALSE)
```

# **Arguments**

showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.

#### Value

```
login - the specified bitly login or the login of the authenticated user name - the user's full/display name default_group_guid - a group to which user belongs created - Timestamp for the moment the user signed up (uses ymd_hms) is_active - whether a user profile is active modified - Timestamp of the last modification to the user profile (uses ymd_hms) is_sso_user - is Single-Sign-On enabled for the user (PREMIUM FEATURE) is_2fa_enabled - is 2 Step verification enabled ? email - user's emails
```

#### User

User operations such as changing your name or fetching basic user information apply only to the authenticated user.

#### See Also

```
https://dev.bitly.com/api-reference/#getUser
```

```
## Not run:
    ui <- bitly_user_info(showRequestURL = TRUE)
## End(Not run)</pre>
```

```
\verb|bitly_user_metrics_referring_domains|\\
```

Get Metrics for a Bitlink by referring domains

## **Description**

This endpoint will rollup the click counts to a referrer about a single Bitlink.

# Usage

```
bitly_user_metrics_referring_domains(
  bitlink = NULL,
  unit = "day",
  units = -1,
  size = 50,
  unit_reference = NULL,
  showRequestURL = FALSE
)
```

# **Arguments**

bitlink - required, a Bitlink made of the domain and hash
 unit - string | Default: "day", Enum: "minute" "hour" "day" "week" "month" | A unit of time
 units - integer | Default: -1 | An integer representing the time units to query data for. pass -1 to return all units of time.
 size - string | Default: 50 | The quantity of items to be be returned
 unit\_reference - string | An ISO-8601 timestamp, indicating the most recent time for which to pull metrics. Will default to current time.
 showRequestURL - an optional T/F value to whether show URL which has been build and requested from server. For debug purposes, default FALSE.

#### Value

```
facet - string | One of "countries" "referrers" "referrers_by_domain" "referring_domains" "referring_networks" "shorten_counts"
```

## See Also

See https://dev.bitly.com/api-reference/#getMetricsForBitlinkByReferringDomains

clipExpanderAddin 49

# **Examples**

```
## Not run:
bitly_user_metrics_referring_domains(bitlink = "cnn.it/2HomWGB", unit = "month", units = -1,
size = 100)
## End(Not run)
```

clipExpanderAddin

Expand an URL from clipboard

# Description

Expand an URL from clipboard

# Usage

clipExpanderAddin()

clipShortenerAddin

Shorten an URL from clipboard

# **Description**

Shorten an URL from clipboard

# Usage

clipShortenerAddin()

isgd\_LinksExpand

Expand a short URL to a longer one

# Description

```
See https://is.gd/apilookupreference.php
```

# Usage

```
isgd_LinksExpand(shorturl = "", showRequestURL = FALSE)
```

50 isgd\_LinksShorten

#### **Arguments**

shorturl

- (optional) You can specify the shorturl parameter if you'd like to pick a shortened URL instead of having is.gd randomly generate one. These must be between 5 and 30 characters long and can only contain alphanumeric characters and underscores. Shortened URLs are case sensitive. Bear in mind that a desired short URL might already be taken (this is very often the case with common words) so if you're using this option be prepared to respond to an error and get an alternative choice from your app's user.

showRequestURL - show URL which has been build and requested from server. For debug purposes.

## **Examples**

```
isgd_LinksExpand(shorturl = "https://is.gd/4oIAXJ", showRequestURL = TRUE)
## End(Not run)
```

isgd\_LinksShorten

Given a long URL, returns a short is.gd link.

#### **Description**

See https://is.gd/apishorteningreference.php

## Usage

```
isgd_LinksShorten(
  longUrl = "",
  logstats = "0"
  shorturl = NULL,
  showRequestURL = FALSE
)
```

# **Arguments**

longUrl

- The url parameter is the address that you want to shorten.

logstats

- (optional) Adding the parameter logstats=1 turns on logging of detailed statistics when the shortened URL you create is accessed. This allows you to see how many times the link was accessed on a given day, what pages referred people to the link, what browser visitors were using etc. You can access these stats via the link preview page for your shortened URL (add a hyphen/dash to the end of the shortened URL to get to it). Creating links with statistics turned on has twice the "cost" towards our rate limit of other shortened links, so leave this parameter out of your API call if you don't require statistics on usage. See our usage limits page for more information on this https://is.gd/usagelimits.php.

shorturl

- (optional) You can specify the shorturl parameter if you'd like to pick a shortened URL instead of having is.gd randomly generate one. These must be between 5 and 30 characters long and can only contain alphanumeric characters and underscores. Shortened URLs are case sensitive. Bear in mind that a desired short URL might already be taken (this is very often the case with common words) so if you're using this option be prepared to respond to an error and get an alternative choice from your app's user.

showRequestURL - show URL which has been build and requested from server. For debug purposes.

# **Examples**

```
## Not run:
short_lin <- isgd_LinksShorten(longUrl = "https://novinky.cz/",showRequestURL = TRUE)</pre>
## End(Not run)
```

is\_bitly\_user\_premium\_holder

Check if authenticated user holds premium account

# **Description**

Check if authenticated user holds premium account

# Usage

```
is_bitly_user_premium_holder()
```

# See Also

[bitly\_user\_info()]

shortenerAddin

Shorten an URL

# **Description**

Call this function as an addin to prompt a url shortener. bit.ly accepts a custom domain, see bitly\_shorten\_link.

#### Usage

```
shortenerAddin()
```

52 vgd\_LinksShorten

vgd\_LinksExpand

Expand a short URL to a longer one

# **Description**

```
See https://v.gd/apilookupreference.php
```

# Usage

```
vgd_LinksExpand(shorturl = "", showRequestURL = FALSE)
```

# **Arguments**

shorturl

- (optional) You can specify the shorturl parameter if you'd like to pick a short-ened URL instead of having v.gd randomly generate one. These must be between 5 and 30 characters long and can only contain alphanumeric characters and underscores. Shortened URLs are case sensitive. Bear in mind that a desired short URL might already be taken (this is very often the case with common words) so if you're using this option be prepared to respond to an error and get an alternative choice from your app's user.

showRequestURL - show URL which has been build and requested from server. For debug purposes.

## **Examples**

```
## Not run:
isgd_LinksExpand(shorturl = "https://v.gd/4oIAXJ", showRequestURL = TRUE)
## End(Not run)
```

vgd\_LinksShorten

Given a long URL, returns a short v.gd link.

## **Description**

See https://v.gd/apishorteningreference.php

# Usage

```
vgd_LinksShorten(
  longUrl = "",
  logstats = "0",
  shorturl = NULL,
  showRequestURL = FALSE
)
```

53 vgd\_LinksShorten

# **Arguments**

longUrl

- The url parameter is the address that you want to shorten.

logstats

- (optional) Adding the parameter logstats=1 turns on logging of detailed statistics when the shortened URL you create is accessed. This allows you to see how many times the link was accessed on a given day, what pages referred people to the link, what browser visitors were using etc. You can access these stats via the link preview page for your shortened URL (add a hyphen/dash to the end of the shortened URL to get to it). Creating links with statistics turned on has twice the "cost" towards our rate limit of other shortened links, so leave this parameter out of your API call if you don't require statistics on usage. See our usage limits page for more information on this https://v.gd/usagelimits.php.

shorturl

- (optional) You can specify the shorturl parameter if you'd like to pick a shortened URL instead of having v.gd randomly generate one. These must be between 5 and 30 characters long and can only contain alphanumeric characters and underscores. Shortened URLs are case sensitive. Bear in mind that a desired short URL might already be taken (this is very often the case with common words) so if you're using this option be prepared to respond to an error and get an alternative choice from your app's user.

showRequestURL - show URL which has been build and requested from server. For debug purposes.

```
## Not run:
assd <- vgd_LinksShorten(longUrl = "https://novinky.cz/",showRequestURL = TRUE)
## End(Not run)
```
