Package 'zoltr'

June 27, 2024

Title Interface to the 'Zoltar' Forecast Repository API

Version 1.0.1

Description 'Zoltar' < https:

//www.zoltardata.com/> is a website that provides a repository of model forecast results in a standardized format and a central location. It supports storing, retrieving, comparing, and analyzing time

series forecasts for prediction challenges of interest to the modeling community. This package provides functions

for working with the 'Zoltar' API, including connecting and authenticating, getting meta information (projects,

models, and forecasts, and truth), and uploading, downloading, and deleting forecast and truth data.

URL https://github.com/reichlab/zoltr,http://reichlab.io/zoltr/

BugReports https://github.com/reichlab/zoltr/issues

License GPL-3

Encoding UTF-8

Suggests testthat, knitr, rmarkdown, webmockr, mockery

Imports data.table, httr, jsonlite, readr, base64url, dplyr, MMWRweek, utils, rlang, magrittr, lubridate

RoxygenNote 7.3.1

VignetteBuilder knitr

busy_poll_job 3

| busy_poll_job | Poll job's status | |
|---------------|-------------------|--|
|---------------|-------------------|--|

Description

A convenience function that polls the passed Job's status waiting for either FAILED, TIMEOUT, or SUCCESS.

Usage

```
busy_poll_job(zoltar_connection, job_url, verbose = TRUE)
```

Arguments

zoltar_connection

A ZoltarConnection object as returned by new_connection()

job_url URL of a valid job in zoltar_connection verbose if TRUE, print messages on job status poll

Examples

```
## Not run:
   busy_poll_job(conn, "http://example.com/api/job/2/")
## End(Not run)
```

create_model

Create a model

Description

Creates the model in the passed project using the passed list. Fails if a model with the passed name already exists.

Usage

```
create_model(zoltar_connection, project_url, model_config)
```

Arguments

```
zoltar_connection
```

A ZoltarConnection object as returned by new_connection()

project_url url of a project in zoltar_connection's projects. this is the project the new model

will be created in

model_config A list containing a Zoltar model configuration. An example: example-model-

config.json . Full documentation at https://docs.zoltardata.com/.

4 create_project

Value

model_url of the newly-created model

Examples

create_project

Create a project

Description

Creates the project using the passed project configuration list. Fails if a project with the passed name already exists.

Usage

```
create_project(zoltar_connection, project_config)
```

Arguments

Value

project_url of the newly-created project

```
## Not run:
    new_project_url <- create_project(conn, jsonlite::read_json("cdc-project.json"))
## End(Not run)</pre>
```

create_timezero 5

create_timezero

Create a timezero

Description

Creates the timezero in the passed project using the passed list. Fails if a timezero with the passed timezero_date already exists.

Usage

```
create_timezero(
  zoltar_connection,
  project_url,
  timezero_date,
  data_version_date = NULL,
  is_season_start = FALSE,
  season_name = ""
)
```

Arguments

```
{\bf A} \ {\bf ZoltarConnection} \\ {\bf Object} \ {\bf as} \ {\bf returned} \ {\bf by} \ {\bf new\_connection()} \\
```

url of a project in zoltar_connection's projects. this is the project the new

timezero will be created in

timezero_date

project_url

The timezero's date in YYYY-MM-DD format as documented at https://docs.zoltardata.com/fileformats/#

creation-configuration-json

data_version_date

Optional data version date in the same format. Pass NULL if the timezero does

not have one

is_season_start

TRUE if this starts a season, and FALSE otherwise

season_name

Applicable when is_season_start is true, names the season, e.g., "2010-2011"

Value

model_url of the newly-created timezero

delete_forecast

```
data_frame_from_forecast_data
```

Converts forecast data from Zoltar's native list format to a data.frame

Description

Converts forecast data from Zoltar's native list format to a data. frame

Usage

```
data_frame_from_forecast_data(forecast_data)
```

Arguments

forecast_data Forecast data as a list in the Zoltar standard format

Value

A data.frame from forecast_data in zoltar-specific format. The columns are: 'unit', 'target', 'class', 'value', 'cat', 'prob', 'sample', 'quantile', 'family', 'param1', 'param2', 'param3'. They are documented at https://docs.zoltardata.com/fileformats/#forecast_data-format-csv . NB: columns are all character (i.e., data type information from forecast_data is lost). Also note that a retracted prediction element is represented as a single row with NA values for all but the first four columns.

Examples

```
## Not run:
    forecast_data <- jsonlite::read_json("docs-predictions.json")
    data_frame <- data_frame_from_forecast_data(forecast_data)
## End(Not run)</pre>
```

delete_forecast

Delete a forecast

Description

Deletes the forecast with the passed URL. This is permanent and cannot be undone.

Usage

```
delete_forecast(zoltar_connection, forecast_url)
```

delete_model 7

Arguments

```
zoltar_connection
A ZoltarConnection object as returned by new_connection()
forecast_url URL of a forecast in zoltar_connection's forecasts
```

Value

A Job URL for the deletion

Examples

```
## Not run:
    delete_forecast(conn, "http://example.com/api/forecast/1/")
## End(Not run)
```

delete_model

Delete a model

Description

Deletes the model with the passed ID. This is permanent and cannot be undone.

Usage

```
delete_model(zoltar_connection, model_url)
```

Arguments

zoltar_connection

A ZoltarConnection object as returned by new_connection()

model_url

URL of a model in zoltar_connection's models

Value

None

```
## Not run:
   delete_model(conn, "http://www.zoltardata.com/api/model/1/")
## End(Not run)
```

8 download_forecast

delete_project

Delete a project

Description

Deletes the project with the passed URL. This is permanent and cannot be undone.

Usage

```
delete_project(zoltar_connection, project_url)
```

Arguments

```
zoltar_connection

A ZoltarConnection object as returned by new_connection()

project_url URL of a project in zoltar_connection's projects
```

Value

None

Examples

```
## Not run:
   delete_project(conn, "https://www.zoltardata.com/api/project/9/")
## End(Not run)
```

download_forecast

Gets a forecast's data

Description

Gets a forecast's data

Usage

```
download_forecast(zoltar_connection, forecast_url)
```

Arguments

```
zoltar_connection
```

A ZoltarConnection object as returned by new_connection()

forecast_url URL of a forecast in zoltar_connection's forecasts

do_zoltar_query 9

Value

Forecast data as a list in the Zoltar standard format. meta information is ignored. Full documentation at https://docs.zoltardata.com/.

Examples

```
## Not run:
    forecast_data <- download_forecast(conn, "http://example.com/api/forecast/1/")

## End(Not run)

do_zoltar_query

A convenience function to construct and execute a Zoltar query for either forecast or truth data.</pre>
```

Description

A convenience function to construct and execute a Zoltar query for either forecast or truth data.

Usage

```
do_zoltar_query(
  zoltar_connection,
  project_url,
  query_type,
  models = NULL,
  units = NULL,
  targets = NULL,
  timezeros = NULL,
  types = NULL,
  as_of = NULL,
  verbose = TRUE
)
```

Arguments

zoltar_connection

A ZoltarConnection object as returned by new_connection()

project_url URL of a project in zoltar_connection's projects

query_type A character indicating the type of query to run. Must be one of: "forecasts" or

"truth".

models Character vector of model abbreviations. Used for query_type = "forecasts".

units Character vector of units to retrieve. Used for all query_types.
targets Character vector of targets to retrieve. Used for all query_types.

timezeros Character vector of timezeros to retrieve in YYYY_MM_DD_DATE_FORMAT,

e.g., '2017-01-17'. Used for all query_types.

10 edit_model

types Character vector of prediction types to retrieve. Used for query_type = "fore-

casts".

as_of a datetime used for either query type that constrains based on forecast issued_at.

must be a datetime as parsed by the dateutil python library https://dateutil.readthedocs.io/en/stable/index.h

, which accepts a variety of styles.

verbose if TRUE, print messages on job status poll

Value

A data.frame of Job's data. Full documentation at https://docs.zoltardata.com/.

Examples

```
## Not run:
    forecast_data <- do_zoltar_query(
        conn, "https://www.zoltardata.com/api/project/44/", "forecasts",
        models=c("CMU-TimeSeries", "UMass-MechBayes"), units=c("01003", "US"),
        targets=c("1 wk ahead inc death"), targets=c("2020-07-19", "2020-07-20"),
        types=c("quantile"), as_of="2020-07-10")
    truth_data <- do_zoltar_query(
        conn, "https://www.zoltardata.com/api/project/44/", "truth", c("01003", "US"),
        c("1 wk ahead inc death"), c("2020-07-19", "2020-07-20"))

## End(Not run)</pre>
```

edit_model

Edit a model

Description

Edits the model in the passed project using the passed list. Fails if a model with the passed name already exists.

Usage

```
edit_model(zoltar_connection, model_url, model_config)
```

Arguments

zoltar_connection

A ZoltarConnection object as returned by new_connection()

model_url url of a project in zoltar_connection's projects. this is the project the new model

will be edited in

model_config A list containing a Zoltar model configuration. An example: example-model-

config.json . Full documentation at https://docs.zoltardata.com/.

forecasts 11

Examples

```
## Not run:
   edit_model(conn, "https://www.zoltardata.com/api/model/2/",
        jsonlite::read_json("example-model-config.json"))
## End(Not run)
```

forecasts

Get a model's forecasts

Description

Get a model's forecasts

Usage

```
forecasts(zoltar_connection, model_url)
```

Arguments

zoltar_connection

A ZoltarConnection object as returned by new_connection()

model_url

URL of a model in zoltar_connection's models

Value

A data.frame of forecast information for the passed model

Examples

```
## Not run:
    the_forecasts <- forecasts(conn, "http://www.zoltardata.com/api/model/1/")
## End(Not run)</pre>
```

```
forecast_data_from_cdc_csv_file
```

Loads and converts a CDC CSV file to Zoltar's native list format

Description

Loads and converts a CDC CSV file to Zoltar's native list format

Usage

```
forecast_data_from_cdc_csv_file(season_start_year, cdc_csv_file)
```

Arguments

```
An integer specifying the "season" that cdc_csv_file is in. Used to convert EWs to YYYY_MM_DD_DATE_FORMAT. zoltr uses week 30 as the season breakpoint, e.g. the "2016/2017 season" starts with
```

cdc_csv_file A CDC CSV file

Value

cdc_csv_file's data as Zoltar's native list format, but only the "predictions" item, and not "meta"

Examples

```
## Not run:
   forecast_data <- forecast_data_from_cdc_csv_file(2016, "my_forecast.cdc.csv")
## End(Not run)</pre>
```

Description

```
forecast_data_from_cdc_csv_file() helper
```

Usage

```
forecast_data_from_cdc_data_frame(season_start_year, cdc_data_frame)
```

Arguments

Value

```
same as forecast_data_from_cdc_csv_file()
```

forecast_info 13

forecast_info

Gets a forecast's information

Description

Gets a forecast's information

Usage

```
forecast_info(zoltar_connection, forecast_url)
```

Arguments

```
zoltar_connection
```

A ZoltarConnection object as returned by new_connection()

forecast_url URL of a forecast in zoltar_connection's forecasts

Value

A list of forecast information for the passed forecast_url

Examples

```
## Not run:
   the_forecast_info <- forecast_info(conn, "http://example.com/api/forecast/1/")
## End(Not run)</pre>
```

get_resource

Get JSON for a resource (URL). Authenticates if necessary

Description

```
Get JSON for a resource (URL). Authenticates if necessary
```

Usage

```
get_resource(zoltar_connection, url, col_types = NULL)
```

Arguments

```
zoltar_connection
```

A ZoltarConnection object as returned by new_connection()

url A string of the resource's URL col_types Same as readr::read_csv takes

job_data job_data

Value

A list that contains JSON information for the passed URL

job_data Gets a job's file's data

Description

Downloads the data for jobs that have an associated file, such as a query's results. Called on Jobs that are the results of a project forecast or truth queries via submit_query(). NB: It is a 404 Not Found error if this is called on a Job that has no underlying S3 data file, which can happen b/c: 1) 24 hours has passed (the expiration time) or 2) the Job is not complete and therefore has not saved the data file. For the latter you may use busy_poll_job() to ensure the job is done.

Usage

```
job_data(zoltar_connection, job_url, query_type)
```

Arguments

```
zoltar_connection
A ZoltarConnection object as returned by new_connection()

job_url
URL of a valid job in zoltar_connection that has a data file associated with it

query_type
A character indicating the type of query to run. Must be one of: "forecasts" or
"truth".
```

Value

```
A data.frame of Job's data. The columns depend on query_type - see https://docs.zoltardata.com/fileformats/#truth-data-format-csv and https://docs.zoltardata.com/fileformats/#forecast-data-format-csv.
```

```
## Not run:
   the_job_data <- job_data(conn, "http://example.com/api/job/2/")
## End(Not run)</pre>
```

job_info

job_info

Get a job's information

Description

Gets a job's information that can be used to track the job's progress. Jobs represent long-running asynchronous activities like uploading a file (e.g., a forecast or truth) or running a query.

Usage

```
job_info(zoltar_connection, job_url)
```

Arguments

```
zoltar_connection

A ZoltarConnection object as returned by new_connection()

job_url URL of a valid job in zoltar_connection
```

Value

A list of job information for the passed job_url. it has these names: id, url, status, user, created_at, updated_at, failure_message, input_json, output_json

Examples

```
## Not run:
    the_job_info <- job_info(conn, "http://example.com/api/job/2/")

## End(Not run)

job_info_forecast_url Get a new forecast upload's url</pre>
```

Description

A helper function for jobs representing file uploads. Returns the URL of a newly-uploaded forecast from job_info.

Usage

```
job_info_forecast_url(zoltar_connection, the_job_info)
```

Arguments

16 latest_forecasts

Value

A URL of the new forecast

Examples

```
## Not run:
    new_forecast_url <- job_info_forecast_url(conn, "http://example.com/api/job/2/")
## End(Not run)</pre>
```

latest_forecasts

Get a project's latest_forecasts

Description

Get a project's latest_forecasts

Usage

```
latest_forecasts(zoltar_connection, project_url)
```

Arguments

```
zoltar_connection
A ZoltarConnection object as returned by new_connection()
project_url URL of a project in zoltar_connection's projects
```

Value

A data.frame of all of the latest forecasts for the passed project. columns: forecast_id, source. (Later we may generalize to allow passing specific columns to retrieve, such as 'forecast_model_id', 'time_zero_id', 'issued_at', 'created_at', 'source', and 'notes'.)

```
## Not run:
    the_latest_forecasts <- latest_forecasts(conn, "https://www.zoltardata.com/api/project/9/")
## End(Not run)</pre>
```

models 17

models

Get a project's models

Description

Get a project's models

Usage

```
models(zoltar_connection, project_url)
```

Arguments

```
zoltar_connection
```

A ZoltarConnection object as returned by new_connection()

project_url URL of a proj

URL of a project in zoltar_connection's projects

Value

A data. frame of model contents for all models in the passed project

Examples

```
## Not run:
    the_models <- models(conn, "https://www.zoltardata.com/api/project/9/")
## End(Not run)</pre>
```

model_info

Get information about a model

Description

Get information about a model

Usage

```
model_info(zoltar_connection, model_url)
```

Arguments

```
{\tt zoltar\_connection}
```

A ZoltarConnection object as returned by new_connection()

model_url

URL of a model in zoltar_connection's models

new_connection

Value

A list of model information for the passed model_url

Examples

```
## Not run:
    the_model_info <- model_info(conn, "http://www.zoltardata.com/api/model/1/")
## End(Not run)</pre>
```

new_connection

Get a connection to a Zoltar host

Description

Returns a new connection object, which is the starting point for working with the Zoltar API. Once you have the connection you can call zoltar_authenticate() on it, and then call projects() to get a list of Project objects to start working with.

Usage

```
new_connection(host = "https://zoltardata.com")
```

Arguments

host

The Zoltar site to connect to. Does *not* include a trailing slash ('/'). Defaults to https://zoltardata.com

Details

A note on URLs: We require a trailing slash ('/') on all URLs. The only exception is the host arg passed to this function. This convention matches Django REST framework one, which is what Zoltar is written in.

Value

A ZoltarConnection object

```
## Not run:
   conn <- new_connection()
## End(Not run)</pre>
```

projects 19

projects

Get information about all projects

Description

Get information about all projects

Usage

```
projects(zoltar_connection)
```

Arguments

zoltar_connection

A ZoltarConnection object as returned by new_connection()

Value

A data. frame of all projects' contents

Examples

```
## Not run:
   the_projects <- projects(conn)
## End(Not run)</pre>
```

project_info

Get information about a project

Description

Get information about a project

Usage

```
project_info(zoltar_connection, project_url)
```

Arguments

```
zoltar_connection
```

A ZoltarConnection object as returned by new_connection()

project_url URL of a project in zoltar_connection's projects

Value

A list of project information for the passed project_url

Examples

```
## Not run:
    the_project_info <- project_info(conn, "https://www.zoltardata.com/api/project/9/")
## End(Not run)</pre>
```

```
\begin{tabular}{ll} quantile\_data\_frame\_from\_forecast\_data \\ & \textit{Converts forecast data from Zoltar's native } \end{tabular} is the format to a quantile \\ & data.frame \end{tabular}
```

Description

Converts forecast data from Zoltar's native list format to a quantile data.frame

Usage

```
quantile_data_frame_from_forecast_data(forecast_data)
```

Arguments

forecast_data Forecast data as a list in the Zoltar standard format

Value

A data.frame from forecast_data that's the same as data_frame_from_forecast_data() does except only includes point and quantile rows, and with this header: 'location', 'target', 'type', 'quantile', 'value', i.e., 'unit' -> 'location' and 'class' -> 'type'

```
## Not run:
    forecast_data <- jsonlite::read_json("docs-predictions.json")
    data_frame <- quantile_data_frame_from_forecast_data(forecast_data)
## End(Not run)</pre>
```

submit_query 21

| Submit a query |
|----------------|
|----------------|

Description

Submits a request for the execution of a query of either forecasts or truth in this Project.

Usage

```
submit_query(zoltar_connection, project_url, query_type, query)
```

Arguments

zoltar_connection

A ZoltarConnection object as returned by new_connection()

project_url URL of a project in zoltar_connection's projects

query_type A character indicating the type of query to run. Must be one of: "forecasts" or

"truth".

query A list of character lists that constrains the queried data. It is the analog of the

JSON object documented at https://docs.zoltardata.com/. The keys vary depending on query_type. References to models, units, targets, and timezeros

are strings that name the objects, and not IDs.

Value

a Job URL for tracking the query and getting its results when it successfully completes

Examples

targets

Get a project's targets

Description

Get a project's targets

22 target_info

Usage

```
targets(zoltar_connection, project_url)
```

Arguments

```
zoltar_connection

A ZoltarConnection object as returned by new_connection()

project_url URL of a project in zoltar_connection's projects
```

Value

A data. frame of target contents for the passed project

Examples

```
## Not run:
    the_targets <- targets(conn, "https://www.zoltardata.com/api/project/9/")
## End(Not run)</pre>
```

target_info

Get information about a target

Description

Get information about a target

Usage

```
target_info(zoltar_connection, target_url)
```

Arguments

```
zoltar_connection

A ZoltarConnection object as returned by new_connection()
target_url

URL of a target in zoltar_connection's targets
```

Value

A list of target information for the passed target_url

```
## Not run:
   the_target_info <- target_info(conn, "https://www.zoltardata.com/api/target/3/")
## End(Not run)</pre>
```

timezeros 23

timezeros

Get a project's timezeros

Description

Get a project's timezeros

Usage

```
timezeros(zoltar_connection, project_url)
```

Arguments

```
zoltar_connection

A ZoltarConnection object as returned by new_connection()

project_url URL of a project in zoltar_connection's projects
```

Value

A data. frame of timezero contents for the passed project

Examples

```
## Not run:
    the_timezeros <- timezeros(conn, "https://www.zoltardata.com/api/project/9/")
## End(Not run)</pre>
```

timezero_info

Get information about a timezero

Description

Get information about a timezero

Usage

```
timezero_info(zoltar_connection, timezero_url)
```

Arguments

```
{\tt zoltar\_connection}
```

A ZoltarConnection object as returned by new_connection()

timezero_url URL of a timezero in zoltar_connection's timezeros

24 truth_info

Value

A list of timezero information for the passed timezero_url

Examples

```
## Not run:
    the_timezero_info <- timezero_info(conn, "https://www.zoltardata.com/api/timezero/3/")
## End(Not run)</pre>
```

truth_info

Get information about a project's truth

Description

Get information about a project's truth

Usage

```
truth_info(zoltar_connection, project_url)
```

Arguments

Value

A list of project truth information for the passed project_url

```
## Not run:
    the_truth_info <- truth_info(conn, "https://www.zoltardata.com/api/project/9/")
## End(Not run)</pre>
```

unit_info 25

unit_info

Get information about a unit

Description

Get information about a unit

Usage

```
unit_info(zoltar_connection, unit_url)
```

Arguments

```
zoltar_connection
A ZoltarConnection object as returned by new_connection()
unit_url
URL of a unit in zoltar_connection's zoltar_units
```

Value

A list of unit information for the passed unit_url

Examples

```
## Not run:
    the_unit_info <- unit_info(conn, "https://www.zoltardata.com/api/unit/3/")
## End(Not run)</pre>
```

upload_forecast

Upload a forecast

Description

This function submits forecast data to the server for uploading. Returns a Job object that can be used to up, which depends on the number of current uploads in the queue. Zoltar tracks these via Job objects.)

Usage

```
upload_forecast(
  zoltar_connection,
  model_url,
  timezero_date,
  forecast_data,
  is_json = TRUE,
  notes = ""
)
```

26 upload_truth

Arguments

zoltar_connection

A ZoltarConnection object as returned by new_connection()

model_url URL of a model in zoltar_connection's projects

timezero_date The date of the project timezero you are uploading for. it is a string in format

YYYYMMDD

forecast_data Forecast data to upload data to upload, either a list (if is_json==TRUE) or a

dataframe otherwise. formats are documented at https://docs.zoltardata.com/

is_json TRUE if forecast_data is JSON (list) format, and FALSE if it is CSV (dataframe)

format

notes Optional user notes for the new forecast

Value

A Job URL for the upload

Examples

upload_truth

Upload truth data

Description

Uploads the data in truth_csv_file to the project identified by project_url.

Usage

```
upload_truth(zoltar_connection, project_url, truth_csv_file, issued_at = NULL)
```

Arguments

zoltar_connection

A ZoltarConnection object as returned by new_connection()

project_url URL of a project in zoltar_connection's projects

truth_csv_file A CSV file as documented at https://docs.zoltardata.com/fileformats/#truth-data-

format-csv

issued_at optional datetime to use for the uploaded truth forecasts' issued at value in

ISO 8601 format. NB: it must include timezone information. (the default issued_at is the time of upload.) the value must obey the constraints documented

at https://docs.zoltardata.com/forecastversions/#forecast-version-rules

zoltar_authenticate 27

Value

A Job URL for the upload

Examples

```
## Not run:
    job_url <- upload_truth(conn, "http://www.zoltardata.com/api/project/1/", "truth.csv")
## End(Not run)</pre>
```

zoltar_authenticate

Log in to a Zoltar host

Description

Returns a new ZoltarConnection object, which is the starting point for working with the Zoltar API. Once you have the connection you can call zoltar_authenticate() on it, and call projects() to get a list of objects to start working with.

Usage

```
zoltar_authenticate(zoltar_connection, username, password)
```

Arguments

zoltar_connection

A ZoltarConnection object as returned by new_connection().

username Username for the account to use on the connection's host

password Password ""

Value

None

```
## Not run:
  zoltar_authenticate(conn, "USERNAME", "PASSWORD")
## End(Not run)
```

28 zoltar_units

zoltar_units

Get a project's zoltar_units

Description

```
Get a project's zoltar_units
```

Usage

```
zoltar_units(zoltar_connection, project_url)
```

Arguments

```
zoltar_connection
```

A ZoltarConnection object as returned by new_connection()

project_url

URL of a project in zoltar_connection's projects

Value

A data. frame of unit contents for the passed project

```
## Not run:
    the_units <- zoltar_units(conn, "https://www.zoltardata.com/api/project/9/")
## End(Not run)</pre>
```
