Package 'RcppTN' October 12, 2022

October 12, 2022
Type Package
Title Rcpp-Based Truncated Normal Distribution RNG and Family
Version 0.2-2
Date 2017-11-21
Author Jonathan Olmsted [aut, cre]
Maintainer Jonathan Olmsted <jpolmsted@gmail.com></jpolmsted@gmail.com>
Description R-level and C++-level functionality to generate random deviates from and calculate moments of a Truncated Normal distribution using the algo- rithm of Robert (1995) <doi:10.1007 bf00143942="">. In addition to RNG, functions for calculating moments, densities, and entropies are provided at both levels.</doi:10.1007>

dtn

Truncated Normal Distribution Density

Description

Calculate density of Truncated Normal distributions

Usage

```
dtn(.x = 0, .mean = rep(0, length(.x)), .sd = rep(1, length(.x)),
   .low = rep(-Inf, length(.x)), .high = rep(Inf, length(.x)),
   .checks = TRUE)
```

Arguments

. x	Length K vector of the points at which to evaluate the density
.mean	Length K vector with the means of the K Normal distributions *prior* to truncation
.sd	Length K vector with the standard deviations of the K Normal distributions *prior* to truncation
.low	Length K vector with the lower truncation bound of the K Normal distributions *prior* to truncation
.high	Length K vector with the upper truncation bound of the K Normal distributions *prior* to truncation
.checks	Logical indicating whether inputs and outputs should be checked and either stop (for bad inputs) or warn (for likely bad outputs)

Value

Length K vector with the entropies associated with each of the K Truncated Normal distributions

Author(s)

Jonathan Olmsted

```
lows <- c(-1, 5, -100, 4, 4, -100, 7)
highs <- c(1, 100, 10, 7, 4.1, 100, 100)
dtn(.x = rep(0, length(lows)),
    .mean = rep(0, length(lows)),
    .sd = rep(1, length(lows)),
    .high = highs
)</pre>
```

enttn 3

enttn

Truncated Normal Distribution Entropy

Description

Calculate entropy of Truncated Normal distributions

Usage

```
enttn(.mean = rep(0, 1), .sd = rep(1, length(.mean)), .low = rep(-Inf,
  length(.mean)), .high = rep(Inf, length(.mean)))
```

Arguments

.mean	Length K vector with the means of the K Normal distributions prior to truncation
.sd	Length K vector with the standard deviations of the K Normal distributions prior to truncation
.low	Length K vector with the lower truncation bound of the K Normal distributions prior to truncation
.high	Length K vector with the upper truncation bound of the K Normal distributions prior to truncation

Value

Length K vector with the entropies associated with each of the K Truncated Normal distributions

Author(s)

Jonathan Olmsted

4 etn

Truncated Normal Distribution Expectation

Description

Calculate expectation of Truncated Normal distributions

Usage

```
etn(.mean = rep(0, 1), .sd = rep(1, length(.mean)), .low = rep(-Inf,
  length(.mean)), .high = rep(Inf, length(.mean)), .checks = TRUE)
```

Arguments

.mean	Length K vector with the means of the K Normal distributions prior to truncation
.sd	Length K vector with the standard deviations of the K Normal distributions prior to truncation
.low	Length K vector with the lower truncation bound of the K Normal distributions prior to truncation
.high	Length K vector with the upper truncation bound of the K Normal distributions prior to truncation
. checks	Length 1 logical vector indicating whether to perform checks (safer) or not (faster) on the input parameters

Details

The special values of -Inf and Inf are valid values in the .low and .high arguments, respectively.

Value

A length K vector of expectations corresponding to the Truncated Normal distributions. NAs are returned (with a warning) for invalid parameter values.

Author(s)

Jonathan Olmsted

```
etn() ## 0
etn(0, 1, -Inf, Inf) ## 0
etn(0, 1, -9999, 9999) ## 0
etn(0, 1, 0, Inf) ## 0.798
etn(0, 1, Inf, -Inf) ## NA with warning
```

rtn 5

```
etn(c(0, 0),
    c(1, 1),
    c(-Inf, 5),
    c(1, Inf)
    ) ## multiple expectations
```

rtn

Truncated Normal Distribution RNG

Description

Sample from Truncated Normal distributions

Usage

```
rtn(.mean = rep(0, 1), .sd = rep(1, length(.mean)), .low = rep(-Inf,
  length(.mean)), .high = rep(Inf, length(.mean)), .checks = TRUE)
```

Arguments

.mean	Length K vector with the means of the K Normal distributions prior to truncation
. sd	Length K vector with the standard deviations of the K Normal distributions prior to truncation
.low	Length K vector with the lower truncation bound of the K Normal distributions prior to truncation
.high	Length K vector with the upper truncation bound of the K Normal distributions prior to truncation
. checks	Length 1 logical vector indicating whether to perform checks (safer) or not (faster) on the input parameters

Details

The special values of -Inf and Inf are valid values in the .low and .high arguments, respectively. The implementation is from Robert (1995). The computation is written in Rcpp-based C++ code, but respects R's RNG state. The draws from this function are reproducible because it respects R's RNG state. Draws using this algorithm (whether implemented in R code or C++) will be the same if seeded correctly. However, you should not expect these draws to match those from another algorithm.

Value

A length K vector of expectations corresponding to the Truncated Normal distributions. NAs are returned (with a warning) for invalid parameter values.

Examples

```
set.seed(1)
rtn(0, 1, -Inf, Inf) # single draw from a single distribution
## [1] -0.6264538
set.seed(1)
rtn(0, 1, -Inf, Inf) # again, because it respects the RNG state
## [1] -0.6264538
rtn(rep(0, 3),
    rep(1, 3),
   rep(-Inf, 3),
   rep(Inf, 3)
   ) # multiple draws from a single distribution
## [1] 0.1836433 -0.8356286 1.5952808
rtn(c(0, 0),
   c(1, 1),
   c(-Inf, 5),
   c(1, Inf)
   ) # multiple draws, each from a different distribution
## [1] 0.3295078 5.3917301
```

vtn

Truncated Normal Distribution Variance

Description

Calculate variance of Truncated Normal distributions

Usage

```
vtn(.mean = rep(0, 1), .sd = rep(1, length(.mean)), .low = rep(-Inf,
  length(.mean)), .high = rep(Inf, length(.mean)), .checks = TRUE)
```

vtn 7

Arguments

.mean	Length K vector with the means of the K Normal distributions prior to truncation
.sd	Length K vector with the standard deviations of the K Normal distributions prior to truncation
.low	Length K vector with the lower truncation bound of the K Normal distributions prior to truncation
.high	Length K vector with the upper truncation bound of the K Normal distributions prior to truncation
.checks	Length 1 logical vector indicating whether to perform checks (safer) or not (faster) on the input parameters

Details

The special values of -Inf and Inf are valid values in the .low and .high arguments, respectively.

Value

A length K vector of expectations corresponding to the Truncated Normal distributions. NAs are returned (with a warning) for invalid. parameter values.
