Package 'unstruwwel'

August 28, 2024

Title Detect and Parse Historic Dates
Version 0.2.1
Maintainer Stefanie Schneider < stefanie.schneider@itg.uni-muenchen.de>
Description Automatically converts language-specific verbal information, e.g., ``1st half of the 19th century," to its standardized numerical counterparts, e.g., ``1801-01-01/1850-12-31." It follows the recommendations of the 'MIDAS' ('Marburger Informations-, Dokumentations- und Administrations-System'), see <doi:10.11588 artdok.00003770="">. License GPL-3</doi:10.11588>

Century

Set a Century and Get its Time Interval

Description

Set a Century and Get its Time Interval Set a Century and Get its Time Interval

Details

An Object of R6Class with methods to set common time periods and specifications for centuries.

Super class

```
unstruwwel::Periods -> Century
```

Methods

Public methods:

- Century\$new()
- Century\$clone()

Method new(): Helper function to specify the beginning of a century.

Helper function to specify the middle of a century.

Helper function to specify the end of a century.

Create a century.

Usage:

Century\$new(value)

Arguments:

value A numerical scalar.

Returns: Object of R6Class with methods to set common time periods and specifications for centuries.

Method clone(): The objects of this class are cloneable with this method.

Usage:

Century\$clone(deep = FALSE)

Arguments:

deep Whether to make a deep clone.

Decade 3

Examples

```
if (interactive()) {
x <- Century$new(15)
x$take(2, type = "third")
}</pre>
```

Decade

Set a Decade and Get its Time Interval

Description

Set a Decade and Get its Time Interval Set a Decade and Get its Time Interval

Details

An Object of R6Class with methods to set common time periods and specifications for decades.

Super class

```
unstruwwel::Periods->Decade
```

Methods

Public methods:

- Decade\$new()
- Decade\$clone()

Method new(): Helper function to specify the beginning of a decade.

Helper function to specify the middle of a decade.

Helper function to specify the end of a decade.

Create a decade.

```
Usage:
```

Decade\$new(value, official_def = FALSE)

Arguments:

value A numerical scalar.

official_def If 'TRUE', the official definition that begins with the year 1 is used.

Returns: Object of R6Class with methods to set common time periods and specifications for decades.

Method clone(): The objects of this class are cloneable with this method.

Usage:

Decade\$clone(deep = FALSE)

Arguments:

deep Whether to make a deep clone.

4 midas

Examples

```
if (interactive()) {
x <- Decade$new(1520)
x$take(1, type = "half")
}</pre>
```

languages

Language Information

Description

A dataset containing the names, date orders, stop words, simplifications, and replacements of 4 languages.

Usage

```
data(languages)
```

Format

A tibble with 4 rows and 5 variables.

midas

MIDAS Standardization Examples

Description

A dataset containing eight thousand standardization examples of the MIDAS (Marburger Informations-, Dokumentations- und Administrations-System).

Usage

```
data(midas)
```

Format

A vector of length 8115.

Periods 5

Periods

Set a Period and Get its Time Interval

Description

Set a Period and Get its Time Interval Set a Period and Get its Time Interval

Details

An Object of R6Class with methods to set common time periods and specifications for time periods.

Public fields

```
.interval Stores a time interval.
fuzzy Either '-1' (approximate) or '1' (uncertain).
express Either '-1' (before) or '1' (after).
```

Active bindings

```
.interval Stores a time interval.
interval Convert and return a POSIXt time interval.
time_span Convert and return a time span in years.
iso_format Convert and return a date in ISO 8601.
```

Methods

Public methods:

- Periods\$new()
- Periods\$set_additions()
- Periods\$take()
- Periods\$clone()

Method new(): Helper function to specify a time period.

Create a time period.

```
Usage:
Periods$new(...)
Arguments:
... Intervals, numer
```

- ... Intervals, numerical scalars, or objects of class Period.
- x A numerical scalar. The range of valid values depends on type. If type is "early", "mid", or "late", x is ignored.

type A character scalar. The following values are supported: "early", "mid", "late", "quarter", "third", and "half". If type is 'NULL', x defines a year or decade.

6 schemes

```
Method set_additions(): Set additions for a time period.
 Usage:
 Periods$set_additions(x)
 Arguments:
 x A character vector.
Method take(): Specify a period.
 Usage:
 Periods$take(x = NA, type = NA, ignore_errors = FALSE)
 Arguments:
 x A numerical scalar. The range of valid values depends on type. If type is "early", "mid",
     or "late", x is ignored.
 type A character scalar. The following values are supported: "early", "mid", "late", "quarter",
     "third", and "half". If type is 'NULL', x defines a year or decade.
 ignore_errors If 'TRUE', error messages are ignored.
 Returns: Object of R6Class with methods to set common time periods and specifications for
 time periods.
Method clone(): The objects of this class are cloneable with this method.
 Usage:
 Periods$clone(deep = FALSE)
 Arguments:
 deep Whether to make a deep clone.
```

schemes

Language-Specific Scheme Variants

Description

A dataset containing the values, schemes, and languages for over three thousand language-specific scheme variants.

Usage

data(schemes)

Format

A tibble with 3583 rows and 3 variables.

unstruwwel 7

unstruwwel

Detect and Parse Historic Dates

Description

Detect and Parse Historic Dates, e.g., to ISO 8601:2-2019.

Usage

```
unstruwwel(
   x,
   language = NULL,
   verbose = TRUE,
   scheme = "time-span",
   fuzzify = c(0, 0)
)
```

Arguments

х	Input vector. Either a character vector, or something coercible to one.
language	Language code of the input vector as defined in ISO 639-1. If NULL, language is detected automatically.
verbose	If TRUE, additional diagnostics are printed.
scheme	Scheme code of the output list. Either time-span, iso-format, or object.
fuzzify	A numerical vector of length 2 to extend the interval of approximate or uncertain

time periods. This is only applied if scheme == "time-span".

Value

A named list of vectors or objects of R6Class.

Note

Although multiple languages can be detected, only dominant ones are ultimately set.

Examples

```
if (interactive()) {
unstruwwel("1. Hälfte 19. Jahrhundert", language = "de")
unstruwwel("circa between 1901 and 1905", language = "en")
}
```

8 Year

Year

Set a Year and Get its Time Interval

Description

Set a Year and Get its Time Interval Set a Year and Get its Time Interval

Details

An Object of R6Class with methods to set common time periods and specifications for years.

Super class

```
unstruwwel::Periods->Year
```

Methods

Public methods:

- Year\$new()
- Year\$take()
- Year\$clone()

Method new(): Helper function to specify a time period.

Helper function to specify a season.

Helper function to specify a month.

Create a year.

Usage:

Year\$new(value)

Arguments:

value A numerical scalar.

Returns: Object of R6Class with methods to set common time periods and specifications for years.

Method take(): Specify a year.

```
Usage:
```

```
Year$take(x = NA, type = NA, ignore_errors = FALSE)
```

Arguments:

```
x A numerical scalar. The range of valid values depends on type. If type is "spring", "summer", "autumn", or "winter", x is ignored.
```

type A character scalar. The following values are supported: "spring", "summer", "autumn", "winter", and all English-language months.

ignore_errors If 'TRUE', error messages are ignored.

Year 9

Returns: Object of R6Class with methods to set common time periods and specifications for years.

Method clone(): The objects of this class are cloneable with this method.

```
Usage:
Year$clone(deep = FALSE)
Arguments:
deep Whether to make a deep clone.
```

Examples

```
if (interactive()) {
x <- Year$new(1520)
x$take(15, type = "june")
}</pre>
```
