# Package 'RcppExamples'

October 12, 2022

Title Examples using Repp' to Interface R and C++
Version 0.1.9
<b>Date</b> 2019-08-24
Author Dirk Eddelbuettel and Romain Francois
Maintainer Dirk Eddelbuettel <edd@debian.org></edd@debian.org>
<b>Description</b> Examples for Seamless R and C++ integration  The 'Rcpp' package contains a C++ library that facilitates the integration of R and C++ in various ways. This package provides some usage examples.  Note that the documentation in this package currently does not cover all the features in the package. The site <a href="http://gallery.rcpp.org">http://gallery.rcpp.org</a> regroups a large number of examples for 'Rcpp'.
<b>Depends</b> R (>= $2.15.1$ )
Imports Rcpp

RcppExamples-package Examples for the Rcpp R/C++ Interface library

## **Description**

This package shows some simple examples for the use of **Rcpp**.

It can also serve as a working template to create packages that use **Rcpp** to interface C++ code or libraries.

## **Details**

The **Rcpp** package provides a number of C++ classes that ease access to C++ from R. This comprises both passing parameters to functions, as well as returning results back from C++ to R.

The **RcppExamples** package provides some simple examples for use of **Rcpp**. At this point the documentation is not complete in the sense of not covering all accessible classes. However, several basic use cases are illustrated,

#### Author(s)

Dominick Samperi wrote the initial versions of Rcpp (and RcppTemplate) during 2005 and 2006. Dirk Eddelbuettel made some additions, and became maintainer in 2008. Dirk Eddelbuettel and Romain Francois have been extending Rcpp since 2009.

#### See Also

The http://gallery.rcpp.org site regroups a number of examples.

RcppDataFrame

Rcpp::DataFrame example for Rcpp

## Description

A DataFrame can be passed C++ and can be instantiated as a corresponding C++ object using the Rcpp API.

This example shows (in the corresponding C++ code) how to access, modify and create a data frame.

RcppDateExample 3

## **Details**

Usage of Rcpp::DataFrame is fully defined in the respective header file.

The C++ source file corresponding to the this function does the following:

```
// we receive a 'DF' data.frame object
     // and access each column by name
     Rcpp::IntegerVector a = DF["a"];
     Rcpp::CharacterVector b = DF["b"];
     Rcpp::DateVector c = DF["c"];
     // do something
     a[2] = 42;
     b[1] = "foo";
     c[0] = c[0] + 7;
                                            // move up a week
     // create a new data frame
     Rcpp::DataFrame NDF =
 Rcpp::DataFrame::create(Rcpp::Named("a")=a,
 Rcpp::Named("b")=b,
 Rcpp::Named("c")=c);
     // and return old and new in list
     return(Rcpp::List::create(Rcpp::Named("origDataFrame")=DF,
Rcpp::Named("newDataFrame")=NDF));
```

## Author(s)

Dirk Eddelbuettel and Romain François

## **Examples**

```
## Not run:
RcppDataFrame()
## End(Not run)
```

RcppDateExample

C++ classes for interfacing date and datetime R objects

## **Description**

Rcpp has the classes Rcpp::Date, Rcpp::Datetime, Rcpp::DateVector and Rcpp::DatetimeVector.

4 RcppDateExample

## **Details**

In the C++ code for the RcppDateExample.cpp file:

```
// [[Rcpp::export]]
List DateExample(DateVector & dv, DatetimeVector & dtv) {
    Function formatDate("format.Date");
    Function formatDatetime("format.POSIXct");
    Rprintf("\nIn C++, seeing the following date value\n");
    for (int i=0; i<dv.size(); i++) {</pre>
        Rcout << as<std::string>(formatDate(wrap(dv[i]))) << std::endl;</pre>
        dv[i] = dv[i] + 7; // shift a week
    Rprintf("\nIn C++, seeing the following datetime value\n");
    for (int i=0; i<dtv.size(); i++) {
    Rcout << as<std::string>(formatDatetime(wrap(dtv[i]))) << std::endl;</pre>
        dtv[i] = dtv[i] + 0.250; // shift 250 millisec
    }
   // Build result set to be returned as a list to R.
   return List::create(Named("date", dv),
                       Named("datetime", dtv));
}
```

## Author(s)

Dominick Samperi wrote the initial versions of Rcpp (and RcppTemplate) during 2005 and 2006. Dirk Eddelbuettel made some additions, and became maintainer in 2008. Dirk Eddelbuettel and Romain François have been extending Rcpp since 2009.

#### References

Writing R Extensions, available at https://www.r-project.org.

```
# set up date and datetime vectors
dvec <- Sys.Date() + -2:2
dtvec <- Sys.time() + (-2:2)*0.5

# call the underlying C++ function
result <- RcppDateExample(dvec, dtvec)

# inspect returned object
result</pre>
```

RcppListExample 5

RcppListExample	Examples of uses of List

#### **Description**

List is an Rcpp class that can be used to manipulate R lists.

## **Arguments**

params A heterogeneous list specifying method (string), tolerance (double), maxIter

(int) and startDate (Date in R, RcppDate in C++).

## Value

RcppListExample returns a list containing:

method string input paramter
tolerance double input paramter
maxIter int input parameter

startDate Date type with starting date

params input parameter list (this is redundant because we returned the input parameters

above)

## Author(s)

Dominick Samperi wrote the initial versions of Rcpp (and RcppTemplate) during 2005 and 2006. Dirk Eddelbuettel made some additions, and became maintainer in 2008. Dirk Eddelbuettel and Romain François have been extending Rcpp since 2009.

RcppMatrixExample

 ${\tt RcppMatrixExample}$ 

Example of using Rcpp NumericMatrix

## **Description**

The NumericMatrix class represents numeric matrices

#### **Details**

The C++ code presented in the MatrixExample.cpp file:

```
#include <Rcpp.h>
 #include <cmath>
// suncc needs help to disambiguate between sqrt( float ) and sqrt(double)
 inline static double sqrt_double(double x) { return ::sqrt(x); }
 using namespace Rcpp;
 // [[Rcpp::export]]
 List MatrixExample(const NumericMatrix & orig) {
     NumericMatrix mat(orig.nrow(), orig.ncol());
     // we could query size via
          int n = mat.nrow(), k=mat.ncol();
     // and loop over the elements, but using the STL is so much nicer
     // so we use a STL transform() algorithm on each element
    std::transform(orig.begin(), orig.end(), mat.begin(), sqrt_double );
     return List::create(Named("result") = mat,
                         Named("original") = orig);
 }
```

## Author(s)

Dominick Samperi wrote the initial versions of Rcpp (and RcppTemplate) during 2005 and 2006. Dirk Eddelbuettel made some additions, and became maintainer in 2008. Dirk Eddelbuettel and Romain François have been extending Rcpp since 2009.

#### References

## **Examples**

```
M <- matrix((1:16)^2, 4)
RcppMatrixExample(M)</pre>
```

RcppNumericVectorExample

Rcpp NumericVector example

## **Description**

Example on how to use a Numeric Vector and manipulate it with the STL.

## **Details**

As shown in the example section, provided the seed is reset, the exact same draws can be obtained in R itself – which is important for reproducibility.

## Author(s)

Dirk Eddelbuettel and Romain François

```
RcppNumericVectorExample(seq(1,9)^2)
```

8 RcppRNGsExample

RcppRNGsExample

Rcpp RNGs example

## Description

Rcpp sugar provides numerous p/q/d/r functions for numerous distributions.

This example shows (in the corresponding C++ code) how to draw from three different distributions and returns a data frame.

#### **Details**

The various header file, and the Rcpp sugar vignette, provide full documentation for Rcpp sugar.

The C++ source file corresponding to the this function does the following:

As shown in the example section, provided the seed is reset, the exact same draws can be obtained in R itself – which is important for reproducibility.

## Author(s)

Dirk Eddelbuettel and Romain François

```
set.seed(42)
X <- RcppRNGsExample(10L)
set.seed(42)
Y <- data.frame(rnorm=rnorm(10),rt=rt(10,1),rpois=rpois(10,1))
all.equal(X,Y)</pre>
```

RcppStringVectorExample

Example of using Rcpp StringVector (aka CharacterVector)

## **Description**

The StringVector (aka CharacterVector) class represents character vectors.

#### **Details**

The C++ code presented in the StringVectorExample.cpp file:

## Author(s)
