# Package 'fauxpas'

May 3, 2023

```
Title HTTP Error Helpers
```

Description HTTP error helpers. Methods included for general purpose HTTP error handling, as well as individual methods for every HTTP status code, both via status code numbers as well as their descriptive names. Supports ability to adjust behavior to stop, message or warning. Includes ability to use custom whisker template to have any configuration of status code, short description, and verbose message. Currently supports integration with 'crul', 'curl', and 'httr'.

fauxpas-package fauxpas

#### **Description**

**HTTP Error Helpers** 

#### Author(s)

Scott Chamberlain <myrmecocystus@gmail.com>

Error *Error class* 

# Description

Error class

#### **Arguments**

behavior Behavior of the error. default: auto. See Details

message\_template

A message template. optional. use whisker templating. names to use are: reason and status. use in template like {{reason}} and {{status}}. Note that {{message}} that is used in message\_template\_verbose will be ignored here.

call. (logical) indicating if the call should become part of the error message. Default: FALSE

message\_template\_verbose

A verbose message template. optional. use whisker templating. names to use are: reason, status, message. use in template like {{reason}}, {{status}}, and {{message}}. Note that this is ignored here, but is used in the HTTP\* methods (e.g. HTTPBadRequest)

muffle (logical) whether to not respond when status codes in 1xx-3xx series. Default: FALSE

Error 3

#### **Details**

#### Methods

• do(response, mssg)

Execute condition, whether it be message, warning, or error.

- response: is any response from crul, curl, or httr Execute condition, whether it be message, warning, error, or your own custom function. This method uses message\_template\_verbose, and uses it's default value.
- mssg: character string message to include in call. ignored if template does not have a message entry
- set\_behavior(behavior)

Set behavior, same as setting behavior on initializing with \$new()

# behavior parameter options

```
• stop - use stop
```

- warning use warning
- message use message
- auto toggle between stop and message depending on the HTTP status code series. Defaults will be:

```
- 1xx: message
```

- 2xx: message

- 3xx: message

- 4xx: stop

- 5xx: stop

Of course, you can always override the defaults.

#### See Also

```
http, Error-Classes
```

# Examples

```
Error$new()
# reset behavior
(z <- Error$new())
z$set_behavior("warning")
z</pre>
```

find\_error\_class

Error-Classes

Individual error classes

#### Description

These error classes are for each HTTP error, and inherit from the Error class in this package.

#### **Details**

In addition to what's available in Error, these classes have a single variable mssg that is the very verbose complete message describing the HTTP condition in detail. You can include that message in your condition by using do\_verbose (see below)

#### Methods

In addition to the methods documented in Error, these methods also have:

- do\_verbose(response, template)
   Execute condition, whether it be message, warning, or error.
  - response: is any response from crul, curl, or httr Execute condition, whether it be message, warning, error, or your own custom function. This method uses message\_template\_verbose, and uses it's default value.
  - template: a template to use for the verbose message, see Error for details

#### **Examples**

find\_error\_class

Find error classes

# **Description**

Find error classes

# Usage

```
find_error_class(status_code)
```

http100 5

# **Arguments**

```
status_code (numeric,integer) A status code
```

#### Value

an object of class R6ClassGenerator. call \$new() to initialize a new instance

#### See Also

```
Error, Error-Classes
```

# **Examples**

```
find_error_class(414)
find_error_class(418)
find_error_class(505)

# initialize the class
find_error_class(418)$new()

# not found
## Not run: find_error_class(999)
```

http100

higher level error wrappers

# **Description**

higher level error wrappers

# Usage

```
http100(response, behavior = "auto", message_template, muffle = FALSE)
http101(response, behavior = "auto", message_template, muffle = FALSE)
http102(response, behavior = "auto", message_template, muffle = FALSE)
http200(response, behavior = "auto", message_template, muffle = FALSE)
http201(response, behavior = "auto", message_template, muffle = FALSE)
http202(response, behavior = "auto", message_template, muffle = FALSE)
http203(response, behavior = "auto", message_template, muffle = FALSE)
http204(response, behavior = "auto", message_template, muffle = FALSE)
```

6 http100

```
http205(response, behavior = "auto", message_template, muffle = FALSE)
http206(response, behavior = "auto", message_template, muffle = FALSE)
http207(response, behavior = "auto", message_template, muffle = FALSE)
http208(response, behavior = "auto", message_template, muffle = FALSE)
http226(response, behavior = "auto", message_template, muffle = FALSE)
http300(response, behavior = "auto", message_template, muffle = FALSE)
http301(response, behavior = "auto", message_template, muffle = FALSE)
http302(response, behavior = "auto", message_template, muffle = FALSE)
http303(response, behavior = "auto", message_template, muffle = FALSE)
http304(response, behavior = "auto", message_template, muffle = FALSE)
http305(response, behavior = "auto", message_template, muffle = FALSE)
http306(response, behavior = "auto", message_template, muffle = FALSE)
http307(response, behavior = "auto", message_template, muffle = FALSE)
http308(response, behavior = "auto", message_template, muffle = FALSE)
http400(response, behavior = "auto", message_template, muffle = FALSE)
http401(response, behavior = "auto", message_template, muffle = FALSE)
http402(response, behavior = "auto", message_template, muffle = FALSE)
http403(response, behavior = "auto", message_template, muffle = FALSE)
http404(response, behavior = "auto", message_template, muffle = FALSE)
http405(response, behavior = "auto", message_template, muffle = FALSE)
http406(response, behavior = "auto", message_template, muffle = FALSE)
http407(response, behavior = "auto", message_template, muffle = FALSE)
http408(response, behavior = "auto", message_template, muffle = FALSE)
http409(response, behavior = "auto", message_template, muffle = FALSE)
```

http(response, behavior = "auto", message_template, muffle = FALSE)
```

#### **Arguments**

response The result of a call via **crul**, **curl**, or **httr**behavior Behavior of the error. default: auto. See Details
message\_template

A message template. optional. use whisker templating. names to use are: reason and status. use in template like {{reason}} and {{status}}. Note that

http100

```
\label{lem:must} $$\{\{\text{message}\}$ that is used in message\_template\_verbose will be ignored here. $$ $\{\{\text{message}\}\}$ whether to not respond when status codes in $1xx-3xx$ series. Default: $$ $\{\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$ $\{\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$ $\{\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$ $\{\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$ $\{\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$ $\{\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$ $\{\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$ $\{\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$ $\{\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$ $\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$ $\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$\{\text{message}\}\}$ that is used in message\_template\_verbose will be ignored here. $$\{\text{message}\}$ that is used in message\_template\_verbose will be ignored here. $$\{\text{message}\}$ that is used in message\_template\_verbose will be ignored here. $$\{\text{message}\}$ that is used in message\_template\_verbose will be ignored here. $$\{\text{message}\}$ that is used in message\_template\_verbose will be ignored here. $$\{\text{message}\}$ that is used in message\_template\_verbose will be ignored here. $$\{\text{message}\}$ that is used in message\_template\_verbose will be ignored here. $$\{\text{message}\}$ that is used in message\_template\_verbose will be ignored here. $$\{\text{message}\}$ that is used in message\_template\_verbose will be ignored
```

# behavior parameter options

```
• stop - use stop
```

- warning use warning
- message use message
- auto toggle between stop and message depending on the HTTP status code series. Defaults will be:

```
1xx: message2xx: message3xx: message4xx: stop5xx: stop
```

Of course, you can always override the defaults.

# using package curl

curl reponses are simple lists, so we have little to go on to make sure it's a response from the **curl** package. We check for list names internally but of course you could pass in a list with the right named elements, while the values are complete nonsense, in which case we'll probably fail badly. There's not much we can do.

# Note

These http\* methods only use \$do and not \$do\_verbose.
