Package 'webchem'

June 9, 2023

```
Title Chemical Information from the Web
```

Description Chemical information from around the web. This package interacts with a suite of web services for chemical information. Sources include: Alan Wood's Compendium of Pesticide Common Names, Chemical Identifier Resolver, ChEBI, Chemical Translation Service, ChemSpider, ETOX, Flavornet, NIST Chemistry WebBook, OPSIN, PubChem, SRS, Wikidata.

```
Type Package Version 1.3.0
```

License MIT + file LICENSE

as.cas

Index

Format numbers as CAS numbers

Description

This function attempts to format numeric (or character) vectors as character vectors of CAS numbers. If they cannot be converted to CAS format or don't pass is.cas, NA is returned

Usage

```
as.cas(x, verbose = getOption("verbose"))
```

Arguments

x numeric vector, or character vector of CAS numbers missing the hyphens verbose logical; should a verbose output be printed on the console?

Value

character vector of valid CAS numbers

See Also

is.cas

```
x = c(58082, 123456, "hexenol") as.cas(x)
```

4 bcpc_query

bcpc_query

Query https://pesticidecompendium.bcpc.org

Description

Query the BCPC Compendium of Pesticide Common Names https://pesticidecompendium. bcpc.org formerly known as Alan Woods Compendium of Pesticide Common Names

Usage

```
bcpc_query(
  query,
  from = c("name", "cas"),
  verbose = getOption("verbose"),
  type,
  ...
)
```

Arguments

query character; search string

from character; type of input ('cas' or 'name')

verbose logical; print message during processing to console?

type deprecated

... additional arguments to internal utility functions

Value

A list of eight entries: common-name, status, preferred IUPAC Name, IUPAC Name, cas, formula, activity, subactivity, inchikey, inchi and source url.

Note

for from = 'cas' only the first matched link is returned. Please respect Copyright, Terms and Conditions https://pesticidecompendium.bcpc.org/legal.html!

References

Eduard Szöcs, Tamás Stirling, Eric R. Scott, Andreas Scharmüller, Ralf B. Schäfer (2020). webchem: An R Package to Retrieve Chemical Information from the Web. Journal of Statistical Software, 93(13). doi:10.18637/jss.v093.i13.

chebi_comp_entity 5

Examples

```
## Not run:
bcpc_query('Fluazinam', from = 'name')
out <- bcpc_query(c('Fluazinam', 'Diclofop'), from = 'name')
out
# extract subactivity from object
sapply(out, function(y) y$subactivity[1])
# use CAS-numbers
bcpc_query("79622-59-6", from = 'cas')
## End(Not run)</pre>
```

chebi_comp_entity

Retrieve Complete Entity from ChEBI

Description

Returns a list of Complete ChEBI entities. ChEBI data are parsed as data.frames ("properties", "chebiid_snd", "synonyms", "iupacnames", "formulae", "regnumbers", "citations", "dblinks", "parents", "children", "comments", "origins") or as a list ("chem_structure") in the list. The SOAP protocol is used https://www.ebi.ac.uk/chebi/webServices.do.

Usage

```
chebi_comp_entity(chebiid, verbose = getOption("verbose"), ...)
```

Arguments

chebiid character; search term (i.e. chebiid).

verbose logical; should a verbose output be printed on the console?

... optional arguments

Value

returns a list of data.frames or lists containing a complete ChEBI entity

Examples

```
## Not run:
# might fail if API is not available
chebi_comp_entity('CHEBI:27744')

# multiple inputs
comp <- c('CHEBI:27744', 'CHEBI:27744')
chebi_comp_entity(comp)

## End(Not run)</pre>
```

chembl_atc_classes

Retrieve all ATC classes

Description

Retrieve all available classes within the Anatomical Therapeutic Chemical (ATC) classification system.

Usage

```
chembl_atc_classes(verbose = getOption("verbose"), test_service_down = FALSE)
```

Arguments

```
verbose logical; should a verbose output be printed on the console? test_service_down
```

logical; this argument is only used for testing.

References

Gaulton, A., Bellis, L. J., Bento, A. P., Chambers, J., Davies, M., Hersey, A., ... & Overington, J. P. (2012). ChEMBL: a large-scale bioactivity database for drug discovery. Nucleic acids research, 40(D1), D1100-D1107.

chembl_query 7

Examples

```
## Not run:
# Might fail if API is not available
atc <- atc_classes()
## End(Not run)</pre>
```

chembl_query

Query ChEMBL using ChEMBL IDs

Description

Retrieve ChEMBL data using a vector of ChEMBL IDs.

Usage

```
chembl_query(
  query,
  resource = "molecule",
  cache_file = NULL,
  verbose = getOption("verbose"),
  test_service_down = FALSE
)
```

Arguments

query character; a vector of ChEMBL IDs.

resource character; the ChEMBL resource to query. Use [chembl_resources()] to see all

available resources.

cache_file character; the name of the cache file without the file extension. If NULL, results

are not cached.

verbose logical; should a verbose output be printed on the console?

test_service_down

logical; this argument is only used for testing.

Details

Each entry in ChEMBL has a unique ID. Data in ChEMBL is organized in databases called resources. An entry may or may not have a record in a particular resource. An entry may have a record in more than one resource, e.g. a compound may be present in both the "molecule" and the "drug" resource. This function queries a vector of ChEMBL IDs from a specific ChEMBL resource.

If you are unsure which ChEMBL resource contains your ChEMBL ID, use this function with the "chembl_id_lookup" resource to find the appropriate resource for a ChEMBL ID. Note that "chembl_id_lookup" is not a separate function but a resource used by chembl_query.

8 chembl_resources

If cache_file is not NULL the function creates a cache directory in the working directory and a cache file in the cache directory. This file is used in subsequent calls of the function. The function first tries to retrieve query results from the cache file and only accesses the webservice if the ChEMBL ID cannot be found in the cache file. The cache file is extended as new ChEMBL ID-s are queried during the session.

Value

The function returns a list of lists, where each element of the list contains a list of respective query results. Results are simplified, if possible.

Note

Links to the webservice documentation:

- $\bullet \ \, \text{https://chembl.gitbook.io/chembl-interface-documentation},$

Examples

```
## Not run:
# Might fail if API is not available

# Search molecules
chembl_query("CHEMBL1082", resource = "molecule")
chembl_query(c("CHEMBL25", "CHEMBL1082"), resource = "molecule")

# Look up ChEMBL IDs in ChEMBL "resources", returns one resource per query.
chembl_query("CHEMBL771355", "chembl_id_lookup")

# Search assays
chembl_query("CHEMBL771355", resource = "assay")

## End(Not run)
```

chembl_resources

List ChEMBL Resources

Description

Data in ChEMBL is organized in databases called resources. This function lists available ChEMBL resources.

cir_img 9

Usage

```
chembl_resources()
```

Note

The list was compiled manually using the following url: https://chembl.gitbook.io/chembl-interface-documentations.web-services/chembl-data-web-services

References

Gaulton, A., Bellis, L. J., Bento, A. P., Chambers, J., Davies, M., Hersey, A., ... & Overington, J. P. (2012). ChEMBL: a large-scale bioactivity database for drug discovery. Nucleic acids research, 40(D1), D1100-D1107.

cir_img

Query Chemical Identifier Resolver Images

Description

A interface to the Chemical Identifier Resolver (CIR). (https://cactus.nci.nih.gov/chemical/structure_documentation).

Usage

```
cir_img(
  query,
  dir,
  format = c("png", "gif"),
 width = 500,
  height = 500,
  linewidth = 2,
  symbol fontsize = 16,
  bgcolor = NULL,
  antialiasing = TRUE,
  atomcolor = NULL,
  bondcolor = NULL,
  csymbol = c("special", "all"),
  hsymbol = c("special", "all"),
  hcolor = NULL,
  header = NULL,
  footer = NULL,
  frame = NULL,
  verbose = getOption("verbose"),
)
```

10 cir_img

Arguments

query character; Search term. Can be any common chemical identifier (e.g. CAS,

INCHI(KEY), SMILES etc.)

dir character; Directory to save the image.

format character; Output format of the image. Can be one of "png", "gif".

width integer; Width of the image. height integer; Height of the image.

linewidth integer; Width of lines.

symbolfontsize integer; Fontsize of atoms in the image.

bgcolor character; E.g. transparent, white, %23AADDEE

antialiasing logical; Should antialiasing be used?

atomcolor character; Color of the atoms in the image.
bondcolor character; Color of the atom bond lines.

csymbol character; Can be one of "special" (default - i.e. only hydrogen atoms in func-

tional groups or defining stereochemistry) or "all".

hsymbol character; Can be one of "special" (default - i.e. none are shown) or "all" (all are

printed).

hcolor character; Color of the hydrogen atoms.

header character; Should a header text be added to the image? Can be any string.

footer character; Should a footer text be added to the image? Can be any string.

frame integer; Should a frame be plotted? Can be on of NULL (default) or 1.

verbose logical; Should a verbose output be printed on the console?

... currently not used.

Details

CIR can resolve can be of the following identifier: Chemical Names, IUPAC names, CAS Numbers, SMILES strings, IUPAC InChI/InChIKeys, NCI/CADD Identifiers, CACTVS HASHISY, NSC number, PubChem SID, ZINC Code, ChemSpider ID, ChemNavigator SID, eMolecule VID.

For an image with transparent background use 'transparent' as color name and switch off antialiasing (i.e. antialiasing = 0).

Value

image written to disk

Note

You can only make 1 request per second (this is a hard-coded feature).

cir_query 11

        height = 600,
        linewidth = 5,
        symbolfontsize = 30,
        bgcolor = "red",
        antialiasing = FALSE,
        atomcolor = "green",
        bondcolor = "yellow",
        csymbol = "all",
        hsymbol = "all",
        hcolor = "purple",
        header = "My funky chemical structure..",
        footer = "..is just so awesome!",
        frame = 1,
        verbose = getOption("verbose"))
## End(Not run)
```

cir_query

Query Chemical Identifier Resolver

Description

A interface to the Chemical Identifier Resolver (CIR). (https://cactus.nci.nih.gov/chemical/structure_documentation).

12 cir_query

Usage

```
cir_query(
  identifier,
  representation = "smiles",
  resolver = NULL,
  match = c("all", "first", "ask", "na"),
  verbose = getOption("verbose"),
  choices = NULL,
  ...
)
```

Arguments

identifier character; chemical identifier.

representation character; what representation of the identifier should be returned. See details

for possible representations.

resolver character; what resolver should be used? If NULL (default) the identifier type

is detected and the different resolvers are used in turn. See details for possible

resolvers.

match character; How should multiple hits be handled? "all" returns all matches,

"first" returns only the first result, "ask" enters an interactive mode and the

user is asked for input, "na" returns NA if multiple hits are found.

verbose logical; should a verbose output be printed on the console?

choices deprecated. Use the match argument instead.

... currently not used.

Details

CIR can resolve can be of the following identifier: Chemical Names, IUPAC names, CAS Numbers, SMILES strings, IUPAC InChI/InChIKeys, NCI/CADD Identifiers, CACTVS HASHISY, NSC number, PubChem SID, ZINC Code, ChemSpider ID, ChemNavigator SID, eMolecule VID.

cir_query() can handle only a part of all possible conversions of CIR. Possible representations are:

- 'smiles'(SMILES strings),
- 'names' (Names),
- 'cas' (CAS numbers),
- 'stdinchikey' (Standard InChIKey),
- 'stdinchi' (Standard InChI),
- 'ficts' (FICTS Identifier),
- 'ficus' (FICuS Indetifier),
- 'mw' (Molecular weight),
- 'monoisotopic_mass' (Monoisotopic Mass),

cir_query 13

- 'formula' (Chemical Formula),
- 'chemspider_id' (ChemSpider ID),
- 'pubchem_sid' (PubChem SID),
- 'chemnavigator_sid' (ChemNavigator SID),
- 'h_bond_donor_count' (Number of Hydrogen Bond Donors),
- 'h_bond_acceptor_count' (Number of Hydrogen Bond Acceptors),
- 'h_bond_center_count' (Number of Hydrogen Bond Centers),
- 'rule_of_5_violation_count' (Number of Rule of 5 Violations),
- 'rotor_count' (Number of Freely Rotatable Bonds),
- 'effective_rotor_count' (Number of Effectively Rotatable Bonds),
- 'ring_count' (Number of Rings),
- 'ringsys_count' (Number of Ring Systems),
- 'xlogp2' (octanol-water partition coefficient),
- 'aromatic' (is the compound aromatic),
- 'macrocyclic' (is the compound macrocyclic),
- 'heteroatom_count' (heteroatom count),
- 'hydrogen_atom_count' (H atom count),
- 'heavy_atom_count' (Heavy atom count),
- 'deprotonable_group_count' (Number of deprotonable groups),
- 'protonable_group_count' (Number of protonable groups).

CIR first tries to determine the identifier type submitted and then uses 'resolvers' to look up the data. If no resolver is supplied, CIR tries different resolvers in turn till a hit is found. E.g. for names CIR tries first to look up in OPSIN and if this fails the local name index of CIR. However, it can be also specified which resolvers to use (if you know e.g. know your identifier type) Possible resolvers are:

- 'name_by_cir' (Lookup in name index of CIR),
- 'name_by_opsin' (Lookup in OPSIN),
- 'name_by_chemspider' (Lookup in ChemSpider, https://cactus.nci.nih.gov/blog/?p= 1386),
- 'smiles' (Lookup SMILES),
- 'stdinchikey', 'stdinchi' (InChI),
- 'cas_number' (CAS Number),
- 'name_pattern' (Google-like pattern search (https://cactus.nci.nih.gov/blog/?p=1456)

 Note, that the pattern search can be combined with other resolvers, e.g. resolver = 'name_by_chemspider, name_pattern'.

Value

A tibble with a 'query' column and a column for the requested representation.

14 cs_check_key

Note

You can only make 1 request per second (this is a hard-coded feature).

## End(Not run)</pre>
```

cs_check_key

Retrieve ChemSpider API key

Description

Look for and retrieve ChemSpider API key stored in .Renviron or .Rprofile.

Usage

```
cs_check_key()
```

Details

To use the any of the functions in webchem that access the ChemSpider database, you'll need to obtain an API key. Register at https://developer.rsc.org/ for an API key. Please respect the Terms & Conditions https://developer.rsc.org/terms.

You can store your API key as CHEMSPIDER_KEY = <your key> in .Renviron or as options (chemspider_key = <your key>) in .Rprofile. This will allow you to use ChemSpider without adding your API key in the beginning of each session, and will also allow you to share your analysis without sharing your API key. Keeping your API key hidden is good practice.

cs_compinfo 15

Value

```
an API key
```

See Also

```
edit_r_environ edit_r_profile
```

Examples

```
## Not run:
cs_check_key()
## End(Not run)
```

cs_compinfo

Retrieve record details by ChemSpider ID

Description

Submit a ChemSpider ID (CSID) and the fields you are interested in, and retrieve the record details for your query.

Usage

```
cs_compinfo(csid, fields, verbose = getOption("verbose"), apikey = NULL)
```

Arguments

csid numeric; can be obtained using get_csid

fields character; see details.

verbose logical; should a verbose output be printed on the console?

apikey character; your API key. If NULL (default), cs_check_key() will look for it in

.Renviron or .Rprofile.

Details

```
Valid values for fields are "SMILES", "Formula", "InChI", "InChIKey", "StdInChI", "StdInChIKey", "AverageMass", "MolecularWeight", "MonoisotopicMass", "NominalMass", "CommonName", "ReferenceCount", "DataSourceCount", "PubMedCount", "RSCCount", "Mol2D", "Mol3D". You can specify any number of fields.
```

Value

Returns a data frame.

16 cs_control

Note

An API key is needed. Register at https://developer.rsc.org/ for an API key. Please respect the Terms & Conditions. The Terms & Conditions can be found at https://developer.rsc.org/ terms.

References

https://developer.rsc.org/docs/compounds-v1-trial/1/overview

Examples

```
## Not run:
cs_compinfo(171, c("SMILES", "CommonName"))
cs_compinfo(171:182, "SMILES")
## End(Not run)
```

cs_control

Control ChemSpider API requests

Description

For some ChemSpider API requests, you can also specify various control options. This function is used to set these control options.

Usage

```
cs_control(
  datasources = vector(),
  order_by = "default",
  order_direction = "default",
  include_all = FALSE,
  complexity = "any",
  isotopic = "any"
)
```

Arguments

```
datasources character; specifies the databases to query. Use cs_datasources() to retrieve available ChemSpider data sources.

order_by character; specifies the sort order for the results. Valid values are "default", "recordId", "massDefect", "molecularWeight", "referenceCount", "dataSourceCount", "pubMedCount", "rscCount".

order_direction character; specifies the sort order for the results. Valid values are "default", "ascending", "descending".

include_all logical; see details.
```

cs_convert 17

```
complexity character; see details. Valid values are "any" "single", "multiple".

isotopic character; see details. Valid values are "any", "labeled", "unlabeled".
```

Details

The only function that currently uses databases is get_csid() and only when you query a CSID from a formula. This parameter is disregarded in all other queries.

Setting include_all to TRUE will consider records which contain all of the filter criteria specified in the request. Setting it to FALSE will consider records which contain any of the filter criteria.

A compound with a complexity of "multiple" has more than one disconnected system in it or a metal atom or ion.

Value

Returns a list of specified control options.

Note

This is a full list of all API control options. However, not all of these options are used in all functions. Each API uses a subset of these controls. The controls that are available for a given function are indicated within the documentation of the function.

References

```
https://developer.rsc.org/docs/compounds-v1-trial/1/overview
```

See Also

```
get_csid
```

Examples

```
cs_control()
cs_control(order_direction = "descending")
```

cs_convert

Convert identifiers using ChemSpider

Description

Submit one or more identifiers (CSID, SMILES, InChI, InChIKey or Mol) and return one or more identifiers in another format (CSID, SMILES, InChI, InChIKey or Mol).

Usage

```
cs_convert(query, from, to, verbose = getOption("verbose"), apikey = NULL)
```

18 cs_convert

Arguments

query character; query ID.

from character; type of query ID.

to character; type to convert to.

verbose logical; should a verbose output be printed on the console?

apikey character; your API key. If NULL (default), cs_check_key() will look for it in .Renviron or .Rprofile.

Details

Not all conversions are supported. Allowed conversions:

- CSID <-> InChI
- CSID <-> InChIKey
- CSID <-> SMILES
- CSID -> Mol file
- InChI <-> InChIKey
- InChI <-> SMILES
- InChI -> Mol file
- InChIKey <-> Mol file

Value

Returns a vector containing the converted identifier(s).

Note

An API key is needed. Register at https://developer.rsc.org/ for an API key. Please respect the Terms & Conditions. The Terms & Conditions can be found at https://developer.rsc.org/ terms.

```

cs_datasources

Retrieve ChemSpider data sources

Description

The function returns a vector of available data sources used by ChemSpider. Some ChemSpider functions allow you to restrict which sources are used to lookup the requested query. Restricting the sources makes these queries faster.

Usage

```
cs_datasources(apikey = NULL, verbose = getOption("verbose"))
```

Arguments

apikey character; your API key. If NULL (default), cs_check_key() will look for it in

.Renviron or .Rprofile.

verbose should a verbose output be printed on the console?

Value

Returns a character vector.

Note

An API key is needed. Register at https://developer.rsc.org/ for an API key. Please respect the Terms & Conditions. The Terms & Conditions can be found at https://developer.rsc.org/ terms.

References

https://developer.rsc.org/docs/compounds-v1-trial/1/overview

```
## Not run:
cs_datasources()
## End(Not run)
```

20 cs_extcompinfo

cs_extcompinfo

Get extended record details by ChemSpider ID

Description

Get extended info from ChemSpider, see https://www.chemspider.com/

Usage

```
cs_extcompinfo(csid, token, verbose = getOption("verbose"), ...)
```

Arguments

```
csid character, ChemSpider ID.
token character; security token.
```

verbose logical; should a verbose output be printed on the console?

... currently not used.

Value

```
a data.frame with entries: 'csid', 'mf' (molecular formula), 'smiles', 'inchi' (non-standard), 'inchikey' (non-standard), 'average_mass', 'mw' (Molecular weight), 'monoiso_mass' (MonoisotopicMass), nominal_mass', 'alogp', 'xlogp', 'common_name' and 'source_url'
```

Note

A security token is needed. Please register at RSC https://www.rsc.org/rsc-id/register for a security token. Please respect the Terms & conditions https://www.rsc.org/help-legal/legal/terms-conditions/.

use cs_compinfo to retrieve standard inchikey.

See Also

get_csid to retrieve ChemSpider IDs, cs_compinfo for extended compound information.

```
## Not run:
token <- "<redacted>"
csid <- get_csid("Triclosan")
cs_extcompinfo(csid, token)

csids <- get_csid(c('Aspirin', 'Triclosan'))
cs_compinfo(csids)

## End(Not run)</pre>
```

cs_img 21

cs_img

Download images from ChemSpider

Description

Retrieve images of substances from ChemSpider and export them in PNG format.

Usage

```
cs_img(
  csid,
  dir,
  overwrite = TRUE,
  apikey = NULL,
  verbose = getOption("verbose")
)
```

Arguments

numeric; the ChemSpider ID (CSID) of the substance. This will also be the name of the image file.

dir character; the download directory. dir accepts both absolute and relative paths. overwrite logical; should existing files in the directory with the same name be overwritten? character; your API key. If NULL (default), cs_check_key() will look for it in

.Renviron or .Rprofile.

verbose logical; should a verbose output be printed on the console?

Note

An API key is needed. Register at https://developer.rsc.org/ for an API key. Please respect the Terms & Conditions. The Terms & Conditions can be found at https://developer.rsc.org/ terms.

References

get_csid, cs_check_key
```

```
## Not run:
cs_img(c(582, 682), dir = tempdir())
## End(Not run)
```

22 cts_compinfo

cts_compinfo

Get record details from Chemical Translation Service (CTS)

Description

Get record details from CTS, see http://cts.fiehnlab.ucdavis.edu/

Usage

```
cts_compinfo(
  query,
  from = "inchikey",
  verbose = getOption("verbose"),
  inchikey
)
```

Arguments

query character; InChIkey.

from character; currently only accepts "inchikey".

verbose logical; should a verbose output be printed on the console?

inchikey deprecated

Value

a list of lists (for each supplied inchikey): a list of 7. inchikey, inchicode, molweight, exactmass, formula, synonyms and externalIds

References

Wohlgemuth, G., P. K. Haldiya, E. Willighagen, T. Kind, and O. Fiehn 2010The Chemical Translation Service – a Web-Based Tool to Improve Standardization of Metabolomic Reports. Bioinformatics 26(20): 2647–2648.

```
## Not run:
# might fail if API is not available
out <- cts_compinfo("XEFQLINVKFYRCS-UHFFFAOYSA-N")
# = Triclosan
str(out)
out[[1]][1:5]

### multiple inputs
inchikeys <- c("XEFQLINVKFYRCS-UHFFFAOYSA-N","BSYNRYMUTXBXSQ-UHFFFAOYSA-N")
out2 <- cts_compinfo(inchikeys)
str(out2)
# a list of two</pre>
```

cts_convert 23

```
# extract molecular weight
sapply(out2, function(y) y$molweight)
## End(Not run)
```

cts_convert

Convert Ids using Chemical Translation Service (CTS)

Description

Convert Ids using Chemical Translation Service (CTS), see http://cts.fiehnlab.ucdavis.edu/

Usage

```
cts_convert(
  query,
  from,
  to,
  match = c("all", "first", "ask", "na"),
  verbose = getOption("verbose"),
  choices = NULL,
  ...
)
```

Arguments

query	character; query ID.
from	character; type of query $ID,\ e.g.$ 'Chemical Name' , 'InChIKey', 'PubChem CID', 'ChemSpider', 'CAS'.
to	character; type to convert to.
match	character; How should multiple hits be handled? "all" returns all matches, "first" returns only the first result, "ask" enters an interactive mode and the user is asked for input, "na" returns NA if multiple hits are found.
verbose	logical; should a verbose output be printed on the console?
choices	deprecated. Use the match argument instead.
• • •	currently not used.

Details

See also http://cts.fiehnlab.ucdavis.edu/ for possible values of from and to.

Value

a list of character vectors or if choices is used, then a single named vector.

cts_from

References

Wohlgemuth, G., P. K. Haldiya, E. Willighagen, T. Kind, and O. Fiehn 2010The Chemical Translation Service – a Web-Based Tool to Improve Standardization of Metabolomic Reports. Bioinformatics 26(20): 2647–2648.

See Also

cts_from for possible values in the 'from' argument and cts_to for possible values in the 'to'
argument.

Examples

```
## Not run:
# might fail if API is not available
cts_convert("XEFQLINVKFYRCS-UHFFFAOYSA-N", "inchikey", "Chemical Name")
### multiple inputs
keys <- c("XEFQLINVKFYRCS-UHFFFAOYSA-N", "VLKZOEOYAKHREP-UHFFFAOYSA-N")
cts_convert(keys, "inchikey", "cas")
## End(Not run)</pre>
```

cts_from

Return a list of all possible ids

Description

Return a list of all possible ids that can be used in the 'from' argument

Usage

```
cts_from(verbose = getOption("verbose"))
```

Arguments

verbose

logical; should a verbose output be printed on the console?

Details

See also http://cts.fiehnlab.ucdavis.edu/services

Value

a character vector.

References

Wohlgemuth, G., P. K. Haldiya, E. Willighagen, T. Kind, and O. Fiehn 2010The Chemical Translation Service – a Web-Based Tool to Improve Standardization of Metabolomic Reports. Bioinformatics 26(20): 2647–2648.

cts_to 25

See Also

```
cts_convert
```

Examples

```
## Not run:
cts_from()
## End(Not run)
```

cts_to

Return a list of all possible ids

Description

Return a list of all possible ids that can be used in the 'to' argument

Usage

```
cts_to(verbose = getOption("verbose"))
```

Arguments

verbose

logical; should a verbose output be printed on the console?

Details

```
See also http://cts.fiehnlab.ucdavis.edu/services
```

Value

a character vector.

References

Wohlgemuth, G., P. K. Haldiya, E. Willighagen, T. Kind, and O. Fiehn 2010The Chemical Translation Service – a Web-Based Tool to Improve Standardization of Metabolomic Reports. Bioinformatics 26(20): 2647–2648.

## End(Not run)
```

26 etox_basic

etox_basic

Get basic information from a ETOX ID

Description

Query ETOX: Information System Ecotoxicology and Environmental Quality Targets https://webetox.uba.de/webETOX/index.do for basic information

Usage

```
etox_basic(id, verbose = getOption("verbose"))
```

Arguments

id character; ETOX ID

verbose logical; print message during processing to console?

Value

a list with lists of four entries: cas (the CAS numbers), ec (the EC number), gsbl (the gsbl number), a data.frame synonys with synonyms and the source url.

Note

Before using this function, please read the disclaimer https://webetox.uba.de/webETOX/disclaimer.do.

References

Eduard Szöcs, Tamás Stirling, Eric R. Scott, Andreas Scharmüller, Ralf B. Schäfer (2020). webchem: An R Package to Retrieve Chemical Information from the Web. Journal of Statistical Software, 93(13). doi:10.18637/jss.v093.i13.

See Also

get_etoxid to retrieve ETOX IDs, etox_basic for basic information, etox_targets for quality targets and etox_tests for test results

```
## Not run:
id <- get_etoxid('Triclosan', match = 'best')
etox_basic(id$etoxid)

# Retrieve data for multiple inputs
ids <- c("20179", "9051")
out <- etox_basic(ids)
out</pre>
```

etox_targets 27

```
# extract cas numbers
sapply(out, function(y) y$cas)
## End(Not run)
```

etox_targets

Get Quality Targets from a ETOX ID

Description

Query ETOX: Information System Ecotoxicology and Environmental Quality Targets https://webetox.uba.de/webETOX/index.do for quality targets

Usage

```
etox_targets(id, verbose = getOption("verbose"))
```

Arguments

id character; ETOX ID

verbose logical; print message during processing to console?

Value

A list of lists of two: res a data.frame with quality targets from the ETOX database, and source_url.

Note

Before using this function, please read the disclaimer https://webetox.uba.de/webETOX/disclaimer.do.

References

Eduard Szöcs, Tamás Stirling, Eric R. Scott, Andreas Scharmüller, Ralf B. Schäfer (2020). webchem: An R Package to Retrieve Chemical Information from the Web. Journal of Statistical Software, 93(13). doi:10.18637/jss.v093.i13.

See Also

get_etoxid to retrieve ETOX IDs, etox_basic for basic information, etox_targets for quality
targets and etox_tests for test results

28 etox_tests

Examples

```
## Not run:
id <- get_etoxid('Triclosan', match = 'best')
out <- etox_targets(id$etoxid)
out[ , c('Substance', 'CAS_NO', 'Country_or_Region', 'Designation',
'Value_Target_LR', 'Unit')]
etox_targets( c("20179", "9051"))
## End(Not run)</pre>
```

etox_tests

Get Tests from a ETOX ID

Description

Query ETOX: Information System Ecotoxicology and Environmental Quality Targets https://webetox.uba.de/webETOX/index.do for tests

Usage

```
etox_tests(id, verbose = getOption("verbose"))
```

Arguments

id character; ETOX ID

verbose logical; print message during processing to console?

Value

A list of lists of two: A data.frame with test results from the ETOX database and the source_url.

Note

Before using this function, please read the disclaimer https://webetox.uba.de/webETOX/disclaimer.do.

See Also

get_etoxid to retrieve ETOX IDs, etox_basic for basic information, etox_targets for quality
targets and etox_tests for test results

extractors 29

Examples

```
## Not run:
id <- get_etoxid('Triclosan', match = 'best')
out <- etox_tests(id$etoxid)
out[ , c('Organism', 'Effect', 'Duration', 'Time_Unit',
'Endpoint', 'Value', 'Unit')]
etox_tests( c("20179", "9051"))
## End(Not run)</pre>
```

extractors

Extract parts from webchem objects

Description

Extract parts from webchem objects

Usage

```
cas(x, ...)
inchikey(x, ...)
smiles(x, ...)
```

Arguments

```
x object
... currently not used.
```

Value

a vector.

References

Eduard Szöcs, Tamás Stirling, Eric R. Scott, Andreas Scharmüller, Ralf B. Schäfer (2020). webchem: An R Package to Retrieve Chemical Information from the Web. Journal of Statistical Software, 93(13). doi:10.18637/jss.v093.i13.

30 find_db

Check data source coverage of compounds

Description

Checks if entries are found in (most) data sources included in webchem

Usage

```
find_db(
  query,
  from,
  sources = c("etox", "pc", "chebi", "cs", "bcpc", "fn", "srs"),
  plot = FALSE
)
```

Arguments

query	character; the search term
from	character; the format or type of query. Commonly accepted values are "name", "cas", "inchi", and "inchikey"
sources	character; which data sources to check. Data sources are identified by the prefix associated with webchem functions that query those databases. If not specified, all data sources listed will be checked.
plot	logical; plot a graphical representation of results.

Value

a tibble of logical values where TRUE indicates that a data source contains a record for the query

```
## Not run:
find_db("hexane", from = "name")
## End(Not run)
```

fn_percept 31

fn_percept

Retrieve flavor percepts from www.flavornet.org

Description

Retrieve flavor percepts from http://www.flavornet.org. Flavornet is a database of 738 compounds with odors perceptible to humans detected using gas chromatography olfactometry (GCO).

Usage

```
fn_percept(query, from = "cas", verbose = getOption("verbose"), CAS, ...)
```

Arguments

query character; CAS number to search by. See is.cas for correct formatting from character; currently only CAS numbers are accepted.

verbose logical; should a verbose output be printed on the console?

CAS deprecated

... currently unused

Value

A named character vector containing flavor percepts or NA's in the case of CAS numbers that are not found

Examples

```
## Not run:
# might fail if website is not available
fn_percept("123-32-0")

CASs <- c("75-07-0", "64-17-5", "109-66-0", "78-94-4", "78-93-3")
fn_percept(CASs)

## End(Not run)</pre>
```

get_chebiid

Retrieve Lite Entity (identifiers) from ChEBI

Description

Returns a data.frame with a ChEBI entity ID (chebiid), a ChEBI entity name (chebiasciiname), a search score (searchscore) and stars (stars) using the SOAP protocol: https://www.ebi.ac.uk/chebi/webServices.do

32 get_chebiid

Usage

```
get_chebiid(
  query,
  from = c("all", "chebi id", "chebi name", "definition", "name", "iupac name",
    "citations", "registry numbers", "manual xrefs", "automatic xrefs", "formula",
    "mass", "monoisotopic mass", "charge", "inchi", "inchikey", "smiles", "species"),
  match = c("all", "best", "first", "ask", "na"),
  max_res = 200,
  stars = c("all", "two only", "three only"),
  verbose = getOption("verbose"),
  ...
)
```

Arguments

query	character; search term.
from	character; type of input. "all" searches all types and "name" searches all names. Other options include 'chebi id', 'chebi name', 'definition', 'iupac name', 'citations', 'registry numbers', 'manual xrefs', 'automatic xrefs', 'formula', 'mass', 'monoisotopic mass', 'charge', 'inchi', 'inchikey', 'smiles', and 'species'
match	character; How should multiple hits be handled?, "all" all matches are returned, "best" the best matching (by the ChEBI searchscore) is returned, "ask" enters an interactive mode and the user is asked for input, "na" returns NA if multiple hits are found.
max_res	integer; maximum number of results to be retrieved from the web service
stars	character; "three only" restricts results to those manualy annotated by the ChEBI team.
verbose	logical; should a verbose output be printed on the console?
	currently unused

Value

returns a list of data.frames containing a chebiid, a chebiasciiname, a searchscore and stars if matches were found. If not, data.frame(NA) is returned

comp <- c('Iron', 'Aspirin', 'BPGDAMSIGCZZLK-UHFFFAOYSA-N')
get_chebiid(comp)

## End(Not run)</pre>
```

get_cid

Retrieve Pubchem Compound ID (CID)

Description

Retrieve compound IDs (CIDs) from PubChem.

Usage

```
get_cid(
  query,
  from = "name",
  domain = c("compound", "substance", "assay"),
  match = c("all", "first", "ask", "na"),
  verbose = getOption("verbose"),
  arg = NULL,
  first = NULL,
  ...
)
```

34 get_cid

Arguments

character; search term, one or more compounds. query from character; type of input. See details for more information. character; query domain, can be one of "compound", "substance", "assay". domain character; How should multiple hits be handled?, "all" all matches are rematch turned, "first" the first matching is returned, "ask" enters an interactive mode and the user is asked for input, "na" returns NA if multiple hits are found. verbose logical; should a verbose output be printed on the console? character; optinal arguments like "name_type=word" to match individual words. arg deprecated. Use 'match' instead. first currently unused. . . .

Details

Valid values for the from argument depend on the domain:

- compound: "name", "smiles", "inchi", "inchikey", "formula", "sdf", "cas" (an alias for "xref/RN"), <xref>, <structure search>, <fast search>.
- substance: "name", "sid", <xref>, "sourceid/<source id>" or "sourceall".
- assay: "aid", <assay target>.

<structure search> is assembled as "substructure | superstructure | similarity | identity /
smiles | inchi | sdf | cid", e.g. from = "substructure/smiles".

<xref> is assembled as "xref/{RegistryID|RN|PubMedID|MMDBID|ProteinGI, NucleotideGI
| TaxonomyID|MIMID|GeneID|ProbeID|PatentID}", e.g. from = "xref/RN" will query by CAS
RN.

<fast search> is either fastformula or it is assembled as "fastidentity | fastsimilarity_2d |
fastsimilarity_3d | fastsubstructure | fastsuperstructure/smiles | smarts | inchi | sdf |
cid", e.g. from = "fastidentity/smiles".

<source id> is any valid PubChem Data Source ID. When from = "sourceid/<source id>", the
query is the ID of the substance in the depositor's database.

If from = "sourceall" the query is one or more valid Pubchem depositor names. Depositor names are not case sensitive.

Depositor names and Data Source IDs can be found at https://pubchem.ncbi.nlm.nih.gov/sources/.

<assay target> is assembled as "target/{gi|proteinname|geneid|genesymbol|accession}",
e.g. from = "target/geneid" will query by GeneID.

Value

a tibble.

get_cid 35

Note

Please respect the Terms and Conditions of the National Library of Medicine, https://www.nlm.nih.gov/databases/download.html the data usage policies of National Center for Biotechnology Information, https://www.ncbi.nlm.nih.gov/home/about/policies/, https://pubchem.ncbi.nlm.nih.gov/docs/programmatic-access, and the data usage policies of the indicidual data sources https://pubchem.ncbi.nlm.nih.gov/sources/.

```

36 get_csid

```
# multiple inputs
get_cid(c("Triclosan", "Aspirin"))
## End(Not run)
```

get_csid

ChemSpider ID from compound name, formula, SMILES, InChI or InChIKey

Description

Query one or more compunds by name, formula, SMILES, InChI or InChIKey and return a vector of ChemSpider IDs.

Usage

```
get_csid(
  query,
  from = c("name", "formula", "inchi", "inchikey", "smiles"),
  match = c("all", "first", "ask", "na"),
  verbose = getOption("verbose"),
  apikey = NULL,
  ...
)
```

Arguments

query	character; search term.
from	character; the type of the identifier to convert from. Valid values are "name", "formula", "smiles", "inchi", "inchikey". The default value is "name".
match	character; How should multiple hits be handled?, "all" all matches are returned, "best" the best matching is returned, "ask" enters an interactive mode and the user is asked for input, "na" returns NA if multiple hits are found.
verbose	logical; should a verbose output be printed on the console?
apikey	character; your API key. If NULL (default), cs_check_key() will look for it in .Renviron or .Rprofile.
	furthrer arguments passed to cs_control

Details

Queries by SMILES, InChI or InChiKey do not use cs_control options. Queries by name use order_by and order_direction. Queries by formula also use datasources. See cs_control() for a full list of valid values for these control options.

formula can be expressed with and without LaTeX syntax.

get_etoxid 37

Value

Returns a tibble.

Note

An API key is needed. Register at https://developer.rsc.org/ for an API key. Please respect the Terms & conditions: https://developer.rsc.org/terms.

References

## End(Not run)
```

get_etoxid

Get ETOX ID

Description

Query ETOX: Information System Ecotoxicology and Environmental Quality Targets https://webetox.uba.de/webETOX/index.do for their substance ID

Usage

```
get_etoxid(
  query,
  from = c("name", "cas", "ec", "gsbl", "rtecs"),
  match = c("all", "best", "first", "ask", "na"),
  verbose = getOption("verbose")
)
```

38 get_etoxid

Arguments

query character; The searchterm

from character; Type of input, can be one of "name" (chemical name), "cas" (CAS

Number), "ec" (European Community number for regulatory purposes), "gsbl" (Identifier used by https://www.chemikalieninfo.de/) and "rtecs" (Identifier used by the Registry of Toxic Effects of Chemical Substances database).

match character; How should multiple hits be handeled? "all" returns all matched IDs,

"first" only the first match, "best" the best matching (by name) ID, "ask" is a interactive mode and the user is asked for input, "na" returns NA if multiple hits

are found.

verbose logical; print message during processing to console?

Value

a tibble with 3 columns: the query, the match, and the etoxID

Note

Before using this function, please read the disclaimer https://webetox.uba.de/webETOX/disclaimer.do.

References

etox_basic for basic information, etox_targets for quality targets and etox_tests for test results.

```
## Not run:
# might fail if API is not available
get_etoxid("Triclosan")
# multiple inputs
comps <- c("Triclosan", "Glyphosate")
get_etoxid(comps)
get_etoxid(comps, match = "all")
get_etoxid("34123-59-6", from = "cas") # Isoproturon
get_etoxid("133483", from = "gsbl") # 3-Butin-1-ol
get_etoxid("203-157-5", from = "ec") # Paracetamol
## End(Not run)</pre>
```

get_wdid 39

get_wdid

Get Wikidata Item ID

Description

Search www.wikidata.org for wikidata item identifiers. Note that this search is currently not limited to chemical substances, so be sure to check your results.

Usage

```
get_wdid(
  query,
  match = c("best", "first", "all", "ask", "na"),
  verbose = getOption("verbose"),
  language = "en"
)
```

Arguments

query character; The searchterm

match character; How should multiple hits be handeled? 'all' returns all matched IDs,

'first' only the first match, 'best' the best matching (by name) ID, 'ask' is a interactive mode and the user is asked for input, na' returns NA if multiple hits

are found.

verbose logical; print message during processing to console?

language character; the language to search in

Value

if match = 'all' a list with ids, otherwise a dataframe with 4 columns: id, matched text, string distance to match and the queried string

Note

Only matches in labels are returned.

```
## Not run:
get_wdid('Triclosan', language = 'de')
get_wdid('DDT')
get_wdid('DDT', match = 'all')

# multiple inputs
comps <- c('Triclosan', 'Glyphosate')
get_wdid(comps)

## End(Not run)</pre>
```

40 is.cas

is.cas

Check if input is a valid CAS

Description

This function checks if a string is a valid CAS registry number. A valid CAS is 1) separated by two hyphes into three parts; 2) the first part consists from two up to seven digits; 3) the second of two digits; 4) the third of one digit (check digit); 5) the check digits corresponds the checksum. The checksum is found by taking the last digit (excluding the check digit) multiplyingit with 1, the second last multiplied with 2, the third-last multiplied with 3 etc. The modulo 10 of the sum of these is the checksum.

Usage

```
is.cas(x, verbose = getOption("verbose"))
```

Arguments

x character; input CAS

verbose logical; print messages during processing to console?

Value

a logical

Note

This function can only handle one CAS string

References

Eduard Szöcs, Tamás Stirling, Eric R. Scott, Andreas Scharmüller, Ralf B. Schäfer (2020). webchem: An R Package to Retrieve Chemical Information from the Web. Journal of Statistical Software, 93(13). doi:10.18637/jss.v093.i13.

```
is.cas('64-17-5')
is.cas('64175')
is.cas('4-17-5')
is.cas('64-177-6')
is.cas('64-17-55')
is.cas('64-17-6')
```

is.inchikey 41

is.inchikey

Check if input is a valid inchikey

Description

This function checks if a string is a valid inchikey. Inchikey must fulfill the following criteria: 1) consist of 27 characters; 2) be all uppercase, all letters (no numbers); 3) contain two hyphens at positions 15 and 26; 4) 24th character (flag character) be 'S' (Standard InChI) or 'N' (non-standard) 5) 25th character (version character) must be 'A' (currently).

Usage

```
is.inchikey(
    x,
    type = c("format", "chemspider"),
    verbose = getOption("verbose")
)
```

Arguments

x character; input InChIKey

type character; How should be checked? Either, by format (see above) ('format') or

by ChemSpider ('chemspider').

verbose logical; print messages during processing to console?

Value

a logical

Note

This function can handle only one inchikey string.

is.inchikey_format('BQJCRHHNABKAKU-KBQPJGBKSA-5')
is.inchikey_format('BQJCRHHNABKAKU-KBQPJGBKSA-n')
is.inchikey_format('BQJCRHHNABKAKU/KBQPJGBKSA/N')
is.inchikey_format('BQJCRHHNABKAKU-KBQPJGBKXA-N')
is.inchikey_format('BQJCRHHNABKAKU-KBQPJGBKSB-N')
## End(Not run)
```

44 is.smiles

is.smiles

Check if input is a SMILES string

Description

This function checks if a string is a valid SMILES by checking if (R)CDK can parse it. If it cannot be parsed by rcdk FALSE is returned, else TRUE.

Usage

```
is.smiles(x, verbose = getOption("verbose"))
```

Arguments

x character; input SMILES.

verbose logical; print messages during processing to console?

Value

a logical

Note

This function can handle only one SMILES string.

References

## Not run:
# might fail if rcdk is not working properly
is.smiles('Clc(c(Cl)c(Cl)c1C(=0)0)c(Cl)c1Cl')
is.smiles('Clc(c(Cl)c(Cl)c1C(=0)0)c(Cl)c1ClJ')
## End(Not run)
```

jagst 45

jagst

Organic plant protection products in the river Jagst / Germany in 2013

Description

This dataset comprises environmental monitoring data of organic plant protection products in the year 2013 in the river Jagst, Germany. The data is publicly available and can be retrieved from the LUBW Landesanstalt für Umwelt, Messungen und Naturschutz Baden-Württemberg. It has been preprocessed and comprises measurements of 34 substances. Substances without detects have been removed. on 13 sampling occasions. Values are given in ug/L.

Usage

jagst

Format

A data frame with 442 rows and 4 variables:

```
date sampling data
substance substance names
value concentration in ug/L
qual qualifier, indicating values < LOQ</pre>
```

Source

https://udo.lubw.baden-wuerttemberg.de/public/pages/home/index.xhtml

1c50

Acute toxicity data from U.S. EPA ECOTOX

Description

This dataset comprises acute ecotoxicity data of 124 insecticides. The data is publicly available and can be retrieved from the EPA ECOTOX database (https://cfpub.epa.gov/ecotox/) It comprises acute toxicity data (D. magna, 48h, Laboratory, 48h) and has been preprocessed (remove non-insecticides, aggregate multiple value, keep only numeric data etc).

Usage

1c50

46 nist_ri

Format

```
A data frame with 124 rows and 2 variables:

cas CAS registry number

value LC50value
```

Source

```
https://cfpub.epa.gov/ecotox/
```

nist_ri

Retrieve retention indices from NIST

Description

This function scrapes NIST for literature retention indices given a query or vector of queries as input. The query can be a cas number, IUPAC name, or International Chemical Identifier (inchikey), according to the value of the from argument. Retention indices are stored in tables by type, polarity and temperature program (temp_prog). The function can take multiple arguments for these parameters and will return any retention times matching the specified criteria in a single table.

If a non-cas query is provided, the function will try to resolve the query by searching the NIST WebBook for a corresponding CAS number. If from == "name", phonetic spellings of Greek stereodescriptors (e.g. "alpha", "beta", "gamma") will be automatically converted to the corresponding letters to match the form used by NIST. If a CAS number is found, it will be returned in a tibble with the corresponding information from the NIST retention index database.

Usage

```
nist_ri(
  query,
  from = c("cas", "inchi", "inchikey", "name"),
  type = c("kovats", "linear", "alkane", "lee"),
  polarity = c("polar", "non-polar"),
  temp_prog = c("isothermal", "ramp", "custom"),
  cas = NULL,
  verbose = getOption("verbose")
)
```

Arguments

query

character; the search term

from

character; type of search term. can be one of "name", "inchi", "inchikey", or "cas". Using an identifier is preferred to "name" since NA is returned in the event of multiple matches to a query. Using an identifier other than a CAS number will cause this function to run slower as CAS numbers are used as internal identifiers by NIST.

nist_ri 47

type Retention index type: "kovats", "linear", "alkane", and/or "lee". See details for more.

Polarity Column polarity: "polar" and/or "non-polar" to get RIs calculated for polar or non-polar columns.

Temperature program: "isothermal", "ramp", and/or "custom".

deprecated. Use query instead.

verbose logical; should a verbose output be printed on the console?

Details

The types of retention indices included in NIST include Kovats ("kovats"), Van den Dool and Kratz ("linear"), normal alkane ("alkane"), and Lee ("lee"). Details about how these are calculated are available on the NIST website: https://webbook.nist.gov/chemistry/gc-ri/

Value

returns a tibble of literature RIs with the following columns:

- query is the query provided to the NIST server
- cas is the CAS number or unique record identified used by NIST
- RI is retention index
- type is the type of RI (e.g. "kovats", "linear", "alkane", or "lee")
- polarity is the polarity of the column (either "polar" or "non-polar")
- temp_prog is the type of temperature program (e.g. "isothermal", "ramp", or "custom")
- column is the column type, e.g. "capillary"
- phase is the stationary phase (column phase)
- length is column length in meters
- gas is the carrier gas used
- substrate
- diameter is the column diameter in mm
- thickness is the phase thickness in µm
- program. various columns depending on the value of temp_prog
- reference is where this retention index was published
- comment. I believe this denotes the database these data were aggregated from

opsin_query

OPSIN web interface

Description

Query the OPSIN (Open Parser for Systematic IUPAC nomenclature) web service https://opsin.ch.cam.ac.uk/instructions.html.

Usage

```
opsin_query(query, verbose = getOption("verbose"), ...)
```

Arguments

```
query character; chemical name that should be queryed.

verbose logical; should a verbose output be printed on the console?

currently not used.
```

Value

```
a tibble with six columnns: "query", inchi", "stdinchi", "stdinchikey", "smiles", "message", and "status"
```

## End(Not run)
```

parse_mol

Parse Molfile (as returned by ChemSpider) into a R-object.

Description

Parse Molfile (as returned by ChemSpider) into a R-object.

Usage

```
parse_mol(string)
```

Arguments

string

molfile as one string

Value

A list with of four entries: header (eh), counts line (cl), atom block (ab) and bond block (bb).

header: a = number of atoms, b = number of bonds, l = number of atom lists, f = obsolete, c = chiral flag (0=not chiral, 1 = chiral), s = number of stext entries, x, r, p, i = obsolete, m = 999, v0 version

atom block: x, y, z = atom coordinates, a = mass difference, c = charge, s = stereo parity, h = hydrogen count 1, b = stereo care box, v = valence, h = h0 designator, r, i = not used, m = atom-atom mapping number, n = inversion/retention flag, e = exact change flag

bond block: 1 = first atom, 2 = second atom, t = bond type, s = stereo type, t = stereo type, $t = \text{stere$

50 pc_prop

pc_prop	Retrieve compound properties from a pubchem CID
pc_prop	Ketrieve compound properties from a publicem CID

Description

Retrieve compound information from pubchem CID, see https://pubchem.ncbi.nlm.nih.gov/

Usage

```
pc_prop(cid, properties = NULL, verbose = getOption("verbose"), ...)
```

Arguments

cid character; Pubchem ID (CID).

properties character vector; properties to retrieve, e.g. c("MolecularFormula", "Molec-

ularWeight"). If NULL (default) all available properties are retrieved. See https://pubchem.ncbi.nlm.nih.gov/docs/pug-rest for a list of all avail-

able properties.

verbose logical; should a verbose output be printed to the console?

... currently not used.

Value

a data.frame

Note

Please respect the Terms and Conditions of the National Library of Medicine, https://www.nlm.nih.gov/databases/download.html the data usage policies of National Center for Biotechnology Information, https://www.ncbi.nlm.nih.gov/home/about/policies/, https://pubchem.ncbi.nlm.nih.gov/docs/programmatic-access, and the data usage policies of the indicidual data sources https://pubchem.ncbi.nlm.nih.gov/sources/.

```

Examples

```
## Not run:
# might fail if API is not available
pc_prop(5564)

###
# multiple CIDS
comp <- c("Triclosan", "Aspirin")
cids <- get_cid(comp)
pc_prop(cids$cid, properties = c("MolecularFormula", "MolecularWeight",
"CanonicalSMILES"))

## End(Not run)</pre>
```

pc_sect

Retrieve data from PubChem content pages

Description

When you search for an entity at https://pubchem.ncbi.nlm.nih.gov/, e.g. a compound or a substance, and select the record you are interested in, you will be forwarded to a PubChem content page. When you look at a PubChem content page, you can see that chemical information is organised into sections, subsections, etc. The chemical data live at the lowest levels of these sections. Use this function to retrieve the lowest level information from PubChem content pages.

Usage

```
pc_sect(
  id,
  section,
  domain = c("compound", "substance", "assay", "gene", "protein", "patent"),
  verbose = getOption("verbose")
)
```

Arguments

id numeric or character; a vector of PubChem identifiers to search for.
section character; the section of the content page to be imported.
domain character; the query domain. Can be one of "compound", "substance", "assay", "gene", "protein" or "patent".
verbose logical; should a verbose output be printed on the console?

52 pc_synonyms

Details

section is not case sensitive but it is sensitive to typing errors and it requires the full name of the section as it is printed on the content page. The PubChem Table of Contents Tree can also be found at https://pubchem.ncbi.nlm.nih.gov/classification/#hid=72.

Value

Returns a tibble of query results. In the returned tibble, SourceName is the name of the depositor, and SourceID is the ID of the search term within the depositor's database. You can browse https://pubchem.ncbi.nlm.nih.gov/sources/ for more information about the depositors.

Note

Please respect the Terms and Conditions of the National Library of Medicine, https://www.nlm.nih.gov/databases/download.html the data usage policies of National Center for Biotechnology Information, https://www.ncbi.nlm.nih.gov/home/about/policies/, https://pubchem.ncbi.nlm.nih.gov/docs/programmatic-access, and the data usage policies of the individual data sources https://pubchem.ncbi.nlm.nih.gov/sources/.

pc_sect(9023, "Ensembl ID", "gene")
pc_sect("1ZHY_A", "Sequence", "protein")
## End(Not run)
```

pc_synonyms

Search synonyms in pubchem

Description

Search synonyms using PUG-REST, see https://pubchem.ncbi.nlm.nih.gov/.

pc_synonyms 53

Usage

```
pc_synonyms(
   query,
   from = c("name", "cid", "sid", "aid", "smiles", "inchi", "inchikey"),
   match = c("all", "first", "ask", "na"),
   verbose = getOption("verbose"),
   arg = NULL,
   choices = NULL,
   ...
)
```

Arguments

query	character; search term.
from	character; type of input, can be one of "name" (default), "cid", "sid", "aid", "smiles", "inchi", "inchikey"
match	character; How should multiple hits be handled? "all" returns all matches, "first" returns only the first result, "ask" enters an interactive mode and the user is asked for input, "na" returns NA if multiple hits are found.
verbose	logical; should a verbose output be printed on the console?
arg	character; optional arguments like "name_type=word" to match individual words.
choices	deprecated. Use the match argument instead.
	currently unused

Value

a named list.

Note

Please respect the Terms and Conditions of the National Library of Medicine, https://www.nlm.nih.gov/databases/download.html the data usage policies of National Center for Biotechnology Information, https://www.ncbi.nlm.nih.gov/home/about/policies/, https://pubchem.ncbi.nlm.nih.gov/docs/programmatic-access, and the data usage policies of the indicidual data sources https://pubchem.ncbi.nlm.nih.gov/sources/.

54 ping_service

Examples

```
## Not run:
pc_synonyms("Aspirin")
pc_synonyms(c("Aspirin", "Triclosan"))
pc_synonyms(5564, from = "cid")
pc_synonyms(c("Aspirin", "Triclosan"), match = "ask")
## End(Not run)
```

ping_service

Ping an API used in webchem to see if it's working.

Description

Ping an API used in webchem to see if it's working.

Usage

```
ping_service(
  service = c("bcpc", "chebi", "chembl", "cs", "cs_web", "cir", "cts", "etox", "fn",
        "nist", "opsin", "pc", "srs", "wd"),
        apikey = NULL
)
```

Arguments

service

character; the same abbreviations used as prefixes in webchem functions, with the exception of "cs_web", which only checks if the ChemSpider website is up,

and thus doesn't require an API key.

apikey

character; API key for services that require API keys

Value

A logical, TRUE if the service is available or FALSE if it isn't

```
## Not run:
ping_service("chembl")
## End(Not run)
```

srs_query 55

srs_query

Get record details from U.S. EPA Substance Registry Servives (SRS)

Description

Get record details from SRS, see https://cdxnodengn.epa.gov/cdx-srs-rest/

Usage

```
srs_query(
  query,
  from = c("itn", "cas", "epaid", "tsn", "name"),
  verbose = getOption("verbose"),
  ...
)
```

Arguments

```
query character; query ID.

from character; type of query ID, e.g. 'itn', 'cas', 'epaid', 'tsn', 'name'.

verbose logical; should a verbose output be printed on the console?

... not currently used.
```

Value

a list of lists (for each supplied query): a list of 22. subsKey, internalTrackingNumber, systematicName, epaIdentificationNumber, currentCasNumber, currentTaxonomicSerialNumber, epaName, substanceType, categoryClass, kingdomCode, iupacName, pubChemId, molecularWeight, molecularFormula, inchiNotation, smilesNotation, classifications, characteristics, synonyms, casNumbers, taxonomicSerialNumbers, relationships

```
## Not run:
# might fail if API is not available
srs_query(query = '50-00-0', from = 'cas')
### multiple inputs
casrn <- c('50-00-0', '67-64-1')
srs_query(query = casrn, from = 'cas')
## End(Not run)</pre>
```

56 wd_ident

wd_ident

Retrieve identifiers from Wikidata

Description

Retrieve identifiers from Wikidata

Usage

```
wd_ident(id, verbose = getOption("verbose"))
```

Arguments

id character; identifier, as returned by get_wdid

verbose logical; print message during processing to console?

Value

```
A data.frame of identifiers. Currently these are 'smiles', 'cas', 'cid', 'einecs', 'csid', 'inchi', 'inchikey', 'drugbank', 'zvg', 'chebi', 'chembl', 'unii', 'lipidmaps', 'swisslipids' and source_url.
```

Note

Only matches in labels are returned. If more than one unique hit is found, only the first is returned.

webchem 57

webchem	webchem: An R package to retrieve chemical information from the web.

Description

Chemical information from around the web. This package interacts with a suite of web APIs for chemical information.

webchem-defunct

Defunct function(s) in the webchem package

Description

These functions are defunct and no longer available.

Usage

```
ppdb_query()
ppdb_parse()
ppdb()
cir()
pp_query()
cs_prop()
ci_query()
pan_query()
```

 $we bchem\hbox{-} deprecated$

Deprecated function(s) in the webchem package

Description

These functions are provided for compatibility with older version of the webchem package. They may eventually be completely removed.

58 with_cts

Usage

```
cid_compinfo(...)
aw_query(...)
```

Arguments

... Parameters to be passed to the modern version of the function

Details

Deprecated functions are:

```
pc_prop was formerly cid_compinfo
bcpc_query was formerly aw_query
```

with_cts

Auto-translate identifiers and search databases

Description

Supply a query of any type (e.g. SMILES, CAS, name, InChI, etc.) along with any webchem function that has query and from arguments. If the function doesn't accept the type of query you've supplied, this will try to automatically translate it using CTS and run the query.

Usage

```
with_cts(query, from, .f, .verbose = getOption("verbose"), ...)
```

Arguments

Value

```
returns results from . f
```

Note

During the translation step, only the first hit from CTS is used. Therefore, using this function to translate on the fly is not foolproof and care should be taken to verify the results.

write_mol 59

Examples

```
## Not run:
with_cts("XDDAORKBJWWYJS-UHFFFAOYSA-N", from = "inchikey", .f = "get_etoxid")
## End(Not run)
```

write_mol

Export a Chemical Structure in .mol Format.

Description

Some webchem functions return character strings that contain a chemical structure in Mol format. This function exports a character string as a .mol file so it can be imported with other chemistry software.

Usage

```
write_mol(x, file = "")
```

Arguments

x a character string of a chemical structure in mol format. file a character vector of file names

```
## Not run:
# export Mol file
csid <- get_csid("bergapten")
mol3d <- cs_compinfo(csid$csid, field = "Mol3D")
write_mol(mol3d$mol3D, file = mol3d$id)

# export multiple Mol files
csids <- get_csid(c("bergapten", "xanthotoxin"))
mol3ds <- cs_compinfo(csids$csid, field = "Mol3D")
mapply(function(x, y) write_mol(x, y), x = mol3ds$mol3D, y = mol3ds$id)

## End(Not run)</pre>
```
