# Package 'shinyGovstyle'

September 12, 2024		
Title Custom Gov Style Inputs for Shiny		
Version 0.1.0		
<b>Description</b> Collection of 'shiny' application styling that are the based on the GOV.UK Design System. See <a href="https://design-system.service.gov.uk/components/">https://design-system.service.gov.uk/components/</a> for details.		
License GPL-3		
<pre>URL https://github.com/moj-analytical-services/shinyGovstyle</pre>		
BugReports https://github.com/moj-analytical-services/shinyGovstyle/issues		
<b>Depends</b> R (>= $3.1.0$ )		
<b>Imports</b> htmltools, jsonlite, magrittr, purrr, shiny (>= 0.14), shinyjs, stringr		
Suggests testthat		
Encoding UTF-8		
RoxygenNote 7.3.2

accordion

Accordion Function

# Description

This function inserts a accordion

# Usage

Index

```
accordion(inputId, titles, descriptions)
```

backlink\_Input 3

## Arguments

inputId Input id for the accordion
titles Add the titles for the accordion
descriptions Add the main text for the accordion

#### Value

an accordion html shiny object

# **Examples**

```
if (interactive()) {
 ui <- fluidPage(</pre>
   shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::banner(
      inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",
   accordion(
      "acc1",
      c("Writing well for the web",
        "Writing well for specialists",
        "Know your audience",
        "How people read"
       ),
      c("This is the content for Writing well for the web.",
        "This is the content for Writing well for specialists.",
        "This is the content for Know your audience.",
        "This is the content for How people read."
       ))),
    shinyGovstyle::footer(full = TRUE)
 server <- function(input, output, session) {}</pre>
 shinyApp(ui = ui, server = server)
}
```

backlink\_Input

Back Link Function

## **Description**

This function adds a back link to the page

4 backlink\_Input

#### Usage

```
backlink_Input(inputId, label = "Back")
```

## **Arguments**

inputId The input slot that will be used to access the value.

label The link text for the backlink, default is "Back"

#### Value

a backlink html shiny object

```
if (interactive()) {
 ui <- fluidPage(</pre>
   header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shiny::navlistPanel(
      id="nav",
      widths = c(2, 10),
      well = FALSE,
      #Create first panel
      shiny::tabPanel(
        "Select Types",
        value = "panel1",
        gov_layout(size = "two-thirds",
          backlink_Input("link1"),
          shiny::tags$br(), shiny::tags$br()
       )),
       shiny::tabPanel(
         "Tab2",
         value = "panel2")),
  shinyGovstyle::footer(full = TRUE)
 )
 server <- function(input, output, session) {</pre>
   #Slightly confused in that it goes forward rather than back, but shows how
    #to use
   observeEvent(input$link1,{
      updateTabsetPanel(session, "nav", selected = "panel2")
   })
 shinyApp(ui = ui, server = server)
```

banner 5

banner

Banner Function

## **Description**

This function create a detail component that you can click for further details.

## Usage

```
banner(inputId, type, label)
```

# Arguments

inputId The input slot that will be used to access the value.

type Main type of label e.g. alpha or beta. Can be any word.

label test to display.

## Value

a banner html shiny object

```
if (interactive()) {
    ui <- fluidPage(
        shinyGovstyle::header(
        main_text = "Example",
        secondary_text = "User Examples",
        logo="shinyGovstyle/images/moj_logo.png"),
        shinyGovstyle::banner(
        inputId = "banner", type = "Beta", 'This is a new service')
)
    server <- function(input, output, session) {}
    shinyApp(ui = ui, server = server)
}</pre>
```

6 button\_Input

button\_Input

**Button Function** 

## **Description**

This function create a gov style button

# Usage

```
button_Input(inputId, label, type = "default")
```

# Arguments

inputId The input slot that will be used to access the value.

label Display label for the control, or NULL for no label.

type The type of button. Options are default, start, secondary and warning. Defaults

to default.

## Value

a html button shiny object

```
if (interactive()) {
 ui <- fluidPage(</pre>
   shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "two-thirds",
      shinyGovstyle::button_Input(
        inputId = "btn1",
        label = "Continue",
        type = "default")
    ),
    shinyGovstyle::footer(full = TRUE)
 )
 server <- function(input, output, session) {}</pre>
 shinyApp(ui = ui, server = server)
}
```

checkbox\_Input 7

checkbox\_Input

Checkbox Function

## **Description**

This function inserts a checkbox group

## Usage

```
checkbox_Input(
  inputId,
  cb_labels,
  checkboxIds,
  label,
  hint_label = NULL,
  small = FALSE,
  error = FALSE,
  error_message = NULL
)
```

## Arguments

Input id for the group of checkboxes inputId cb\_labels Add the names of the options that will appear checkboxIds Add the values for each checkbox label Insert the text for the checkbox group. hint\_label Insert optional hint/secondary text. Defaults to NULL change the sizing to a small version of the checkbox. Defaults to FALSE small Whenever you want to include error handle on the component. error If you want a default error message. error\_message

#### Value

a checkbox html shiny object

```
if (interactive()) {
    ui <- fluidPage(
        # Required for error handling function
        shinyjs::useShinyjs(),
        shinyGovstyle::header(
            main_text = "Example",
            secondary_text = "User Examples",
            logo="shinyGovstyle/images/moj_logo.png"),</pre>
```

```
shinyGovstyle::banner(
     inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",
      # Simple checkbox
      shinyGovstyle::checkbox_Input(
        inputId = "check1",
        cb_labels = c("Option 1", "Option 2", "Option 3"),
        checkboxIds = c("op1", "op2", "op3"),
       label = "Choice option"),
       # Error checkbox
      shinyGovstyle::checkbox_Input(
        inputId = "check2",
        cb_labels = c("Option 1", "Option 2", "Option 3"),
        checkboxIds = c("op1", "op2", "op3"),
        label = "Choice option",
        hint_label = "Select the best fit",
        error = TRUE,
        error_message = "Select one"),
     # Button to trigger error
     shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
   ),
   shinyGovstyle::footer(full = TRUE)
 )
 server <- function(input, output, session) {</pre>
   #'Trigger error on blank submit of eventId2
   observeEvent(input$submit, {
     if (is.null(input$check2)){
        shinyGovstyle::error_on(inputId = "check2")
        shinyGovstyle::error_off(inputId = "check2")
   })
 }
 shinyApp(ui = ui, server = server)
}
```

contents\_link

Contents link function

#### **Description**

This function creates an action link to nav between tabs and optionally link to subcontents headers.

## Usage

```
contents_link(link_text, input_id, subcontents_text_list, subcontents_id_list)
```

#### **Arguments**

#### Value

an action button html shiny object

```
if (interactive()) {
    ui <- shiny::fluidPage(</pre>
     title="ShinyGovstyle",
       cookieBanner("Run Example"),
       header("MOJ", "ShinyGovstyle Example",
              logo="shinyGovstyle/images/moj_logo-1.png", logo_width = 66),
       banner(
         "banner",
         "Beta",
         'This is a new service \u002D your <a class="govuk-link" href="#">
             feedback</a> will help us to improve it.'),
       #Need this to make the error and word count work
       shinyjs::useShinyjs(),
       #Add a message to show users how to see this code
       shiny::tags$br(),
       shiny::markdown(
         "Run ```View(run_example)``` in console to see the code for this app"),
       gov_row(
         # Nav columns
         shiny::column(
           width = 3,
           id = "nav", # DO NOT REMOVE ID
           # Contents box
           shiny::tags$div(
             id = "govuk-contents-box", #DO NOT REMOVE ID
             class = "govuk-contents-box", #DO NOT REMOVE CLASS
             shiny::tags$h2("Contents"),
             # Text types tab
```

```
contents_link(
      "Text Types",
      "text_types_button",
      subcontents_text_list = c("date_Input",

    })
   }
shiny::shinyApp(ui = ui, server = server)
```

cookieBanner

Cookie Banner Function

## Description

}

This function creates a cookie banner. You need to have shinyjs::useShinyjs() enabled to work. All the ids are pre set. See example for how to structure.

#### Usage

```
cookieBanner(service_name)
```

cookieBanner 13

## **Arguments**

service\_name Name for this service to add to banner

#### Value

a cookie banner html shiny object.

```
if (interactive()) {
ui <- fluidPage(</pre>
  shinyGovstyle::header(
   main_text = "Example",
    secondary_text = "User Examples",
    logo="shinyGovstyle/images/moj_logo.png"),
  #Needs shinyjs to work
  shinyjs::useShinyjs(),
  shinyGovstyle::cookieBanner("The best thing"),
  shinyGovstyle::gov_layout(size = "two-thirds"),
  shinyGovstyle::footer(full = TRUE)
)
server <- function(input, output, session) {</pre>
  #Need these set of observeEvent to create a path through the cookie banner
  observeEvent(input$cookieAccept, {
    shinyjs::show(id = "cookieAcceptDiv")
    shinyjs::hide(id = "cookieMain")
  })
  observeEvent(input$cookieReject, {
    shinyjs::show(id = "cookieRejectDiv")
    shinyjs::hide(id = "cookieMain")
  })
  observeEvent(input$hideAccept, {
    shinyjs::toggle(id = "cookieDiv")
  })
  observeEvent(input$hideReject, {
    shinyjs::toggle(id = "cookieDiv")
  })
  observeEvent(input$cookieLink, {
    #Need to link here to where further info is located. You can use
    #updateTabsetPanel to have a cookie page for instance
  })
shinyApp(ui = ui, server = server)
```

14 date\_Input

date\_Input

Date Input Function

## Description

This function create a date input that follows GDS component

## Usage

```
date_Input(
  inputId,
  label,
  hint_label = NULL,
  error = FALSE,
  error_message = NULL,
  day = NULL,
  month = NULL,
  year = NULL
)
```

#### **Arguments**

inputId The input slot that will be used to access the value.

label Display label for the control, or NULL for no label.

hint\_label Display hint label for the control, or NULL for no hint label.

error Whenever to include error components.Defaults to FALSE.

error\_message Error handling message? Defaults to NULL

day Select a default day on start up. Defaults to NULL month Select a default month on start up. Defaults to NULL year Select a default year on start up. Defaults to NULL

#### Value

a data input html shiny object

```
if (interactive()) {
    ui <- fluidPage(
        # Required for error handling function.
        shinyjs::useShinyjs(),
        shinyGovstyle::header(
            main_text = "Example",
            secondary_text = "User Examples",
            logo="shinyGovstyle/images/moj_logo.png"),</pre>
```

details 15

```
shinyGovstyle::banner(
    inputId = "banner", type = "beta", 'This is a new service'),
  shinyGovstyle::gov_layout(size = "two-thirds",
     # Simple date input
    shinyGovstyle::date_Input(
      inputId = "dob_input",
      label = "Please enter your birthday"),
     # Error date input
     shinyGovstyle::date_Input(
       inputId = "dob_input2",
       label = "Please enter your birthday",
       hint_label = "For example, 12 11 2007",
       error = TRUE),
     # Button to trigger error
     shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
 ),
  shinyGovstyle::footer(full = TRUE)
)
server <- function(input, output, session) {</pre>
  #'Trigger error on blank submit of dob_input2
  observeEvent(input$submit, {
    if (input$dob_input2 == "//"){
      shinyGovstyle::error_on(inputId = "dob_input2")
    } else {
      shinyGovstyle::error_off(
        inputId = "dob_input2")
    }
 })
shinyApp(ui = ui, server = server)
```

details

**Details Function** 

# Description

This function create a detail component that you can click for further details.

# Usage

```
details(inputId, label, help_text)
```

# Arguments

inputId The input slot that will be used to access the value.

label Main label text

help\_text Additional help information in the component.

16 error\_off

## Value

a details box html shiny object

## **Examples**

```
if (interactive()) {
 ui <- fluidPage(
   shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "two-thirds",
      shinyGovstyle::details(
        inputId = "help_div",
        label = "Help with form",
        help_text = "To complete the form you need to fill it in...")
   ),
   shinyGovstyle::footer(full = TRUE)
 )
 server <- function(input, output, session) {}</pre>
 shinyApp(ui = ui, server = server)
}
```

error\_off

Error off Function

# Description

This function turns off the the error o the component, once issues have been sorted.

## Usage

```
error_off(inputId)
```

## **Arguments**

inputId

The inputId to turn error handling iff for on for.

## Value

no return value. This toggles off error css

error\_on 17

#### **Examples**

```
## Only run examples in interactive R sessions
if (interactive()) {
 ui <- fluidPage(</pre>
    # Required for error handling function
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::banner(
      inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",
      # Error text box
      shinyGovstyle::text_Input(
        inputId = "eventId",
       label = "Event Name",
        error = TRUE),
      # Button to trigger error
      shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
   ),
   shinyGovstyle::footer(full = TRUE)
 server <- function(input, output, session) {</pre>
   #Trigger error on blank submit of eventId2
   observeEvent(input$submit, {
      if (input$eventId != ""){
        shinyGovstyle::error_off(inputId = "eventId")
      } else {
        shinyGovstyle::error_on(
          inputId = "eventId",
          error_message = "Please complete")
      }
   })
 }
 # Run the application
 shinyApp(ui = ui, server = server)
}
```

error\_on

Error on Function

## **Description**

This function turns on the the error o the component. Can be used to validate inputs.

18 error\_on

#### Usage

```
error_on(inputId, error_message = NULL)
```

#### **Arguments**

inputId The input id that you to to turn the error on for.

error\_message if you want to add an additional error message. Defaults to NULL, showing the

original designed error message

#### Value

no return value. This toggles on error css

```
## Only run examples in interactive R sessions
if (interactive()) {
 ui <- fluidPage(</pre>
    # Required for error handling function
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::banner(
      inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",
      # Error text box
      shinyGovstyle::text_Input(
        inputId = "eventId",
       label = "Event Name",
        error = TRUE),
      # Button to trigger error
      shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
   ),
    shinyGovstyle::footer(full = TRUE)
 server <- function(input, output, session) {</pre>
    #Trigger error on blank submit of eventId2
   observeEvent(input$submit, {
      if (input$eventId != ""){
        shinyGovstyle::error_off(inputId = "eventId")
        shinyGovstyle::error_on(
          inputId = "eventId",
          error_message = "Please complete")
   })
```

error\_summary 19

```
}
# Run the application
shinyApp(ui = ui, server = server)
}
```

error\_summary

Error Summary Function

## **Description**

This function loads the error summary component to display error text. This replicates the gov style error boxes linked below: https://design-system.service.gov.uk/components/error-summary/

#### Usage

```
error_summary(inputId, error_title, error_list)
```

## **Arguments**

inputId The input slot that will be used to access the value.

error\_title The title for the error summary.

error\_list A list of text values to be displayed in the error body.

## Value

an error\_summary html shiny object

```
if (interactive()) {
 ui <- fluidPage(</pre>
   shinyjs::useShinyjs(),
   shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
     logo = "shinyGovstyle/images/moj_logo.png"
   ),
   shinyGovstyle::gov_layout(
      size = "two-thirds",
      error_summary(
       inputId = "errorId",
       error_title = "Error title",
        error_list = c("error item1", "error item2")
      )
   ),
   shinyGovstyle::button_Input("btn1", "Change error summary"),
    shinyGovstyle::footer(full = TRUE)
 )
```

```
server <- function(input, output, session) {
    shiny::observeEvent(input$btn1, {
        error_summary_update(
            "errorId",
            c("error item1", "error item2", "error item3")
        )},
        ignoreInit = TRUE
    )
    shinyApp(ui = ui, server = server)
}</pre>
```

## **Description**

This function changes the text that displays in the error summary box. Requires shinyjs::useShinyjs() to work.

## Usage

```
error_summary_update(inputId, error_list)
```

## **Arguments**

inputId The inputid of the error summary you want to update error\_list An updated list of text values to be displayed in the error body.

#### Value

an update error summary box

```
if (interactive()) {
    ui <- fluidPage(
        shinyjs::useShinyjs(),
        shinyGovstyle::header(
        main_text = "Example",
        secondary_text = "User Examples",
        logo = "shinyGovstyle/images/moj_logo.png"
    ),
    shinyGovstyle::gov_layout(
        size = "two-thirds",
        error_summary(
        inputId = "errorId",</pre>
```

file\_Input 21

```
error_title = "Error title",
    error_list = c("error item1", "error item2")
)
),
shinyGovstyle::button_Input("btn1", "Change error summary"),
shinyGovstyle::footer(full = TRUE)
)

server <- function(input, output, session) {
    shiny::observeEvent(input$btn1, {
        error_summary_update(
            "errorId",
            c("error item1", "error item2", "error item3")
    )},
    ignoreInit = TRUE
    )
}
shinyApp(ui = ui, server = server)
}</pre>
```

file\_Input

File Input Function

## **Description**

This function create a file upload component. It uses the basis of the shiny fileInput function, but restyles the label and adds error onto it. It doesn't look like the www.gov.uk/ style one, although this www.gov.uk/ doesn't seem to have a settle style as, for example it changes between Firefox and Chrome

## Usage

```
file_Input(
  inputId,
  label,
  multiple = FALSE,
  accept = NULL,
  width = NULL,
  buttonLabel = "Choose file",
  placeholder = "No file chosen",
  error = FALSE,
  error_message = NULL
)
```

# Arguments

inputId

The input slot that will be used to access the value.

22 file\_Input

Display label for the control, or NULL for no label. label Whether the user should be allowed to select and upload multiple files at once. multiple Does not work on older browsers, including Internet Explorer 9 and earlier. A character vector of MIME types; gives the browser a hint of what kind of files accept the server is expecting. width The width of the input, e.g. '400px', or '100%' buttonLabel The label used on the button. Can be text or an HTML tag object. placeholder The text to show before a file has been uploaded. error Whenever to icnlud error handling Defaults to FALSE. Message to display on error. Defaults to NULL error\_message

#### Value

a file input html shiny object

```
if (interactive()) {
 ui <- fluidPage(</pre>
   # Required for error handling function
   shinyjs::useShinyjs(),
   shinyGovstyle::header(
     main_text = "Example",
     secondary_text = "User Examples",
     logo="shinyGovstyle/images/moj_logo.png"),
   shinyGovstyle::banner(
    inputId = "banner", type = "beta", 'This is a new service'),
   shinyGovstyle::gov_layout(size = "two-thirds",
      # Simple file input
      shinyGovstyle::file_Input(inputId = "file1", label = "Upload a file"),
      # Error file
      shinyGovstyle::file_Input(
       inputId = "file2",
       label = "Upload a file",
       error = TRUE),
      # Button to trigger error
     shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
   ),
   shinyGovstyle::footer(full = TRUE)
 server <- function(input, output, session) {</pre>
   #'Trigger error on blank submit of file2
   observeEvent(input$submit, {
     if (is.null(input$file2)){
        shinyGovstyle::error_on(inputId = "file2")
        shinyGovstyle::error_off(
          inputId = "file2")
      }
```

font 23

```
})
}
shinyApp(ui = ui, server = server)
}
```

font

Font Function

# Description

This function adds rge nta fonts to the app. See https://design-system.service.gov.uk/styles/typography/ for when they are allowed.

## Usage

font()

## Value

no value returned. This loads the font css file

## **Examples**

```
if (interactive()) {
    ui <- fluidPage(
        font(),
        shinyGovstyle::header(
        main_text = "Example",
        secondary_text = "User Examples",
        logo="shinyGovstyle/images/moj_logo.png")
)
    server <- function(input, output, session) {}
    shinyApp(ui = ui, server = server)
}</pre>
```

footer

Footer Function

# Description

This function create a gov style footer for your page

# Usage

```
footer(full = FALSE)
```

24 govTable

## **Arguments**

full

Whenever you want to have blank footer or official gov version. Defaults to FALSE

#### Value

a footer html shiny object

## **Examples**

```
if (interactive()) {
    ui <- fluidPage(
        shinyGovstyle::header(
        main_text = "Example",
        secondary_text = "User Examples",
        logo="shinyGovstyle/images/moj_logo.png"),
        shinyGovstyle::banner(
        inputId = "banner", type = "beta", 'This is a new service'),
        tags$br(),
        tags$br(),
        shinyGovstyle::footer(full = TRUE)
)

server <- function(input, output, session) {}
        shinyApp(ui = ui, server = server)
}</pre>
```

govTable

Table Function

## **Description**

This function inserts a gov styled table. Format is with header looking rows and columns

# Usage

```
govTable(
  inputId,
  df,
  caption,
  caption_size = "l",
  num_col = NULL,
  width_overwrite = NULL)
```

govTable 25

# Arguments

```
inputId Input id for the table

df expects a dataframe to create a table

caption adds a caption to the table as a header

caption_size adjust the size of caption. Options are s, m, l, xl, with l as the default

num_col adds numeric class format to these columns.

width_overwrite

change width. Need to include width for every column. Options are three-quarters, two-thirds, one-half, one-third, one-quarter. Default is NULL.
```

#### Value

an table html shiny object

```
if (interactive()) {
 Months <- c("January", "February", "March")</pre>
 Bikes <- c("£85", "£75", "£165")
 Cars <- c("£95", "£55", "£125")
 example_data <- data.frame(Months, Bikes, Cars)</pre>
 ui <- fluidPage(</pre>
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::banner(
      inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",
    shinyGovstyle::govTable(
      "tab1", example_data, "Test", "l", num_col = c(2,3),
      width_overwrite = c("one-half", "one-quarter", "one-quarter"))
   ),
    shinyGovstyle::footer(full = TRUE)
 server <- function(input, output, session) {}</pre>
 shinyApp(ui = ui, server = server)
}
```

26 govTabs

govTabs

Tabs Function

# Description

This function creates a tabs based table. It requires a single dataframe with a grouping variable

# Usage

```
govTabs(inputId, df, group_col)
```

# **Arguments**

inputId The id to access the tag

df A single dataframe with all data. See example for structure.

group\_col The column name with the groups to be used as tabs

#### Value

a tab table html shiny object.

```
if (interactive()) {
 # Create an example dataset
 tabs <- c(rep("Past Day", 3),</pre>
            rep("Past Week", 3),
            rep("Past Month", 3),
            rep("Past Year", 3))
 Case_manager <- rep(c("David Francis", "Paul Farmer", "Rita Patel"),4)</pre>
 Cases_open <- c(3, 1, 2, 24, 16, 24, 98, 122, 126, 1380, 1129, 1539)
 Cases_closed <- c(0, 0, 0, 18, 20, 27, 95, 131, 142, 1472, 1083, 1265)
 data <- data.frame(tabs, Case_manager, Cases_open, Cases_closed)</pre>
 ui <- fluidPage(</pre>
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "two-thirds",
      shinyGovstyle::govTabs(data, "tabs")),
    shinyGovstyle::footer(full = TRUE)
 )
 server <- function(input, output, session) {}</pre>
 shinyApp(ui = ui, server = server)
}
```

gov\_layout 27

gov\_layout

Page Layout Function

#### **Description**

This function loads the page layout, This doesn't work as well as the 'gov\_main\_layout' and associated functions. This is being kept for now as a simpler version where grids are not needed.

## Usage

```
gov_layout(..., inputID = "main", size = "full")
```

## **Arguments**

... include the components of the UI that you want within the main page.

inputID ID of the main div. Defaults to "main"

size Layout of the page. Optional are full, one-half, two-thirds, one-third and one-

quarter. Defaults to "full"

#### Value

a html shiny layout div

```
if (interactive()) {
 ui <- fluidPage(</pre>
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "full",
      shinyGovstyle::panel_output(
        inputId = "panel1",
        main_text = "Application Complete",
        sub_text = "Thank you for submitting your application.
        Your reference is xvsiq")
   ),
    shinyGovstyle::footer(full = TRUE)
 server <- function(input, output, session) {}</pre>
 shinyApp(ui = ui, server = server)
}
```

28 gov\_summary

gov_summary	Tabs	Function
-------------	------	----------

#### **Description**

This function creates a tabs based table. It requires a single dataframe with a grouping variable

## Usage

```
gov_summary(inputId, headers, info, action = FALSE, border = TRUE)
```

## **Arguments**

inputId The id to access the summary list
headers input for the row headers value
info summary information values for the table
action whenever a change link is needed. sets input to the value of the headers using lowercase and with underscore to replace gaps. Default set to FALSE
border set if the table should have borders. Default set to TRUE

#### Value

a summary list table html shiny object.

```
if (interactive()) {
 # Create an example dataset
 headers <- c("Name", "Date of birth", "Contact information", "Contact details")
 info <- c(
    "Sarah Philips",
    "5 January 1978",
    "72 Guild Street <br> London <br> SE23 6FH",
    "07700 900457 <br > sarah.phillips@example.com")
 ui <- fluidPage(</pre>
    shinyGovstyle::header(
     main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "two-thirds";
      shinyGovstyle::gov_summary("sumID", headers, info, action = FALSE)),
    shinyGovstyle::footer(full = TRUE)
 )
 server <- function(input, output, session) {}</pre>
 shinyApp(ui = ui, server = server)
```

header 29

}

header

Header Function

#### **Description**

This function create a header banner. For use at top of the screen

#### Usage

```
header(
  main_text,
  secondary_text,
  logo = NULL,
  main_link = "#",
  secondary_link = "#",
  logo_width = 36,
  logo_height = 32
)
```

#### **Arguments**

main\_text Main text that goes in the header
secondary\_text Secondary header to supplement the main text
logo Add a link to a logo which will apply in the header. Use crown to use the crown svg version on gov uk.
main\_link Add a link for clicking on main text
secondary\_link Add a link for clicking on secondary header.
logo\_width Change the logo size width css to improve fit
logo\_height Change the logo size height css to improve fit

## Value

a header html shiny object

```
if (interactive()) {
    ui <- fluidPage(
        shinyGovstyle::header(
        main_text = "Example",
        secondary_text = "User Examples",
        logo="shinyGovstyle/images/moj_logo.png")
)</pre>
```

30 heading\_text

```
server <- function(input, output, session) {}
shinyApp(ui = ui, server = server)
}</pre>
```

heading\_text

Heading Text Function

## **Description**

This function create a heading text

#### Usage

```
heading_text(text_input, size = "xl", id)
```

# Arguments

```
text_input Text to display
size Text size using xl, l, m, s. Defaults to xl.
id Custom header id
```

#### Value

a heading text html shiny object

```
if (interactive()) {
  ui <- fluidPage(
    shinyGovstyle::header(
    main_text = "Example",
    secondary_text = "User Examples",
    logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "two-thirds",
        shinyGovstyle::heading_text("This is great text", "m")
    ),
    shinyGovstyle::footer(full = TRUE)
)

server <- function(input, output, session) {}
    shinyApp(ui = ui, server = server)
}</pre>
```

input\_field 31

<pre>input_field</pre>	Input Field Function
------------------------	----------------------

# Description

This function inserts number of text inputs. Useful for addresses.

# Usage

```
input_field(
  legend,
  labels,
  inputIds,
  widths = NULL,
  types = "text",
  error = FALSE,
  error_message = NULL
)
```

# Arguments

legend	Legend that goes above the fieldset
labels	A list of labels for the text inputs
inputIds	A list input slots that will be used to access the value.
widths	control the size of the box based on number of characters required. Options are 30, 20, 10, 5, 4, 3, 2. NULL will not limit the size
types	text box types. Will default to text.
error	Whenever to icnlud error handling Defaults to FALSE.
error_message	Message to display on error. Defaults to NULL

#### Value

a input field of html as a shiny object

```
if (interactive()) {
    ui <- fluidPage(
        # Required for error handling function
        shinyjs::useShinyjs(),
        shinyGovstyle::header(
            main_text = "Example",
            secondary_text = "User Examples",
            logo="shinyGovstyle/images/moj_logo.png"),
        shinyGovstyle::banner(</pre>
```

insert\_text

```
inputId = "banner", type = "beta", 'This is a new service'),
  shinyGovstyle::gov_layout(size = "two-thirds",
    shinyGovstyle::input_field(
      legend ="List of three text boxes in a field",
      labels = c("Field 1", "Field 2", "Field 3"),
      inputIds = c("field1", "field2", "field3"),
      widths = c(30, 20, 10),
      error = TRUE),
   # Button to trigger error
   shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
 ),
  shinyGovstyle::footer(full = TRUE)
server <- function(input, output, session) {</pre>
  # Trigger error on blank submit of field2
  observeEvent(input$submit, {
    if (input$field2 == ""){
      shinyGovstyle::error_on(inputId = "field2",
                              error_message = "Please complete")
    } else {
      shinyGovstyle::error_off(
        inputId = "field2")
 })
shinyApp(ui = ui, server = server)
```

insert\_text

Insert Text Function

#### **Description**

This function loads the insert text component to display additional information in a special format.

#### Usage

```
insert_text(inputId, text)
```

## **Arguments**

inputId

The input slot that will be used to access the value.

text

Text that you want to display on the insert

#### Value

a insert text html shiny object

label\_hint 33

#### **Examples**

```
if (interactive()) {
 ui <- fluidPage(</pre>
   shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "two-thirds",
      shinyGovstyle::insert_text(
        inputId = "note",
        text = "It can take up to 8 weeks to register a lasting power of
                attorney if there are no mistakes in the application."
      )
   ),
    shinyGovstyle::footer(full = TRUE)
 server <- function(input, output, session) {}</pre>
 shinyApp(ui = ui, server = server)
}
```

label\_hint

Label with Hint Function

## **Description**

This function inserts a label and optional hint

#### Usage

```
label_hint(inputId, label, hint_input = NULL)
```

## **Arguments**

inputId The input slot that will be used to access the value.

label Display label for the control, or NULL for no label.

hint\_input Display hint label for the control, or NULL for no hint label.

#### Value

a label hint html shiny object

```
if (interactive()) {
  ui <- fluidPage(
    shinyGovstyle::header(
    main_text = "Example",</pre>
```

34 layouts

```
secondary_text = "User Examples",
  logo="shinyGovstyle/images/moj_logo.png"),
  shinyGovstyle::gov_layout(size = "two-thirds",
  label_hint(
    inputId = "label1",
    label = "This is a label",
    hint_input = "This is a hint")
),
  shinyGovstyle::footer(full = TRUE)
)
server <- function(input, output, session) {}
  shinyApp(ui = ui, server = server)
}</pre>
```

layouts

Page Layout Functions

## **Description**

These function loads the page layout in a gov layout. There is a selection of components that can sit within each other. The gov\_main\_layout is the overarching layout. The gov\_row creates a each row and gov\_box creates a box within the row. The gov\_text is a container for text bodies.

#### Usage

```
gov_main_layout(..., inputID = "main")
gov_row(...)
gov_box(..., size = "full")
gov_text(...)
```

#### **Arguments**

include the components of the UI that you want within the main page. These components are made to flow through each other. See example
 inputID ID of the main div. Defaults to "main"
 size size of the box in the row. Optional are full, one-half, two-thirds, one-third and one-quarter. Defaults to "full"

#### Value

a html shiny layout div

layouts 35

```
if (interactive()) {
 ui <- fluidPage(</pre>
   shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_main_layout(
      shinyGovstyle::gov_row(
        shinyGovstyle::gov_box(
          size = "full",
          shinyGovstyle::gov_text("govuk-grid-column-full")
       )
      ),
      shinyGovstyle::gov_row(
        shinyGovstyle::gov_box(
          size = "one-half",
          shinyGovstyle::gov_text("govuk-grid-column-one-half")
       ),
        shinyGovstyle::gov_box(
          size = "one-half",
          shinyGovstyle::gov_text("govuk-grid-column-one-half")
      ),
      shinyGovstyle::gov_row(
        shinyGovstyle::gov_box(
          size = "one-third",
          shinyGovstyle::gov_text("govuk-grid-column-one-third")
        ),
        shinyGovstyle::gov_box(
          size = "two-third",
          shinyGovstyle::gov_text("govuk-grid-column-two-third")
        )
      ),
      shinyGovstyle::gov_row(
        shinyGovstyle::gov_box(
          size = "one-quarter",
          shinyGovstyle::gov_text("govuk-grid-column-one-quarter")
       ),
        shinyGovstyle::gov_box(
          size = "three-quarters",
          shinyGovstyle::gov_text("govuk-grid-column-three-quarters")
       )
      )
   ),
    shinyGovstyle::footer(full = TRUE)
 )
 server <- function(input, output, session) {}</pre>
 shinyApp(ui = ui, server = server)
```

noti\_banner

noti\_banner

Notification Banner Function

# Description

This function create a notification banner

## Usage

```
noti_banner(
  inputId,
  title_txt = "Important",
  body_txt = NULL,
  type = "standard"
)
```

# Arguments

inputId The input id for the banner

title\_txt The wording that appears in the title

body\_txt The wording that appears in the banner body

type The type of banner. Options are standard and success. Standard is default

#### Value

a notification html shiny object

```
if (interactive()) {
    ui <- fluidPage(
        shinyGovstyle::header(
        main_text = "Example",
        secondary_text = "User Examples",
        logo="shinyGovstyle/images/moj_logo.png"),
        shinyGovstyle::noti_banner(
        inputId = "banner", title_txt = "Important", body_txt = "Example text")
)
    server <- function(input, output, session) {}
    shinyApp(ui = ui, server = server)
}</pre>
```

panel\_output 37

panel\_output

Panel output

## **Description**

This function inserts a panel. Normally used for confirmation screens

## Usage

```
panel_output(inputId, main_text, sub_text)
```

## **Arguments**

inputId The input slot that will be used to access the value.

main\_text Add the header for the panel

sub\_text Add the main body of text for the panel

#### Value

a panel html shiny object

```
if (interactive()) {
 ui <- fluidPage(</pre>
   shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "full",
      shinyGovstyle::panel_output(
        inputId = "panel1",
        main_text = "Application Complete",
        sub\_text = "Thank you for submitting your application."
                    Your reference is xvsiq")
    shinyGovstyle::footer(full = TRUE)
 server <- function(input, output, session) {}</pre>
 shinyApp(ui = ui, server = server)
}
```

38 radio\_button\_Input

radio\_button\_Input

Radio Button Function

#### **Description**

This function create radio buttons

#### Usage

```
radio_button_Input(
  inputId,
  label,
  choices = NULL,
  selected = NULL,
  inline = FALSE,
  small = FALSE,
  choiceNames = NULL,
  choiceValues = NULL,
  hint_label = NULL,
  error = FALSE,
  error_message = NULL,
  custom_class = ""
```

## Arguments

inputId The input slot that will be used to access the value.

label Input label.

choices List of values to select from (if elements of the list are named then that name

rather than the value is displayed to the user)

selected The initially selected value.

inline If you want the radio inline or not, Default is FALSE

small If you want the smaller versions of radio buttons, Default is FALSE

choiceNames, choiceValues

Same as in checkboxGroupInput. List of names and values, respectively, that are displayed to the user in the app and correspond to the each choice (for this reason they must have the same length). If either of these arguments is provided, then the other must be provided and choices must not be provided. The advantage of using both of these over a named list for choices is that choiceNames allows any type of UI object to be passed through (tag objects, icons, HTML

code, ...), instead of just simple text.

hint\_label Additional hint text you may want to display below the label. Defaults to NULL

error Whenever you want to include error handle on the component.

error\_message If you want a default error message.

 radio\_button\_Input 39

#### Value

radio buttons html shiny object

```
if (interactive()) {
 ui <- fluidPage(</pre>
    # Required for error handling function
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::banner(
      inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",
      #Simple radio
      shinyGovstyle::radio_button_Input(
        inputId = "radio1",
choices = c("Yes", "No", "Maybe"),
        label = "Choice option"),
      # Error radio
      shinyGovstyle::radio_button_Input(
        inputId = "radio2",
        choices = c("Yes", "No", "Maybe"),
        label = "Choice option",
        hint_label = "Select the best fit",
        inline = TRUE,
        error = TRUE,
        error_message = "Select one"),
      # Button to trigger error
      shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
    shinyGovstyle::footer(full = TRUE)
 server <- function(input, output, session) {</pre>
    #Trigger error on blank submit of eventId2
    observeEvent(input$submit, {
      if (is.null(input$radio2)){
        shinyGovstyle::error_on(inputId = "radio2")
      } else {
        shinyGovstyle::error_off(
          inputId = "radio2")
   })
 shinyApp(ui = ui, server = server)
```

40 select\_Input

run\_example

Example Function

## **Description**

This function runs a shiny example using different parts of the package

# Usage

```
run_example()
```

#### Value

a shiny app with examples in

# **Examples**

```
if (interactive()) {
run_example()
}
```

select\_Input

Select Function

# Description

This function inserts a select box

# Usage

```
select_Input(inputId, label, select_text, select_value)
```

# Arguments

inputId Input id for the component label Insert the text for the label.

select\_text Add the text that will apply in the drop down as a list select\_value Add the value that will be used for each selection.

#### Value

a select input html shiny object

tag\_Input 41

#### **Examples**

```
if (interactive()) {
 ui <- fluidPage(</pre>
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "full",
      select_Input(
        inputId = "sorter",
        label = "Sort by",
        select_text = c("Recently published",
                         "Recently updated",
                         "Most views",
                         "Most comments"),
        select_value = c("published", "updated", "view", "comments")),
        tags$br()
    ),
    shinyGovstyle::footer(full = TRUE)
 server <- function(input, output, session) {}</pre>
 shinyApp(ui = ui, server = server)
}
```

tag\_Input

Tag Function

# Description

This function creates a tag

#### Usage

```
tag_Input(inputId, text, colour = "navy")
```

## **Arguments**

inputId The id to access the tag
text The text in the tag

colour The colour of the tag. Default is navy. Other options are grey, green, turquoise,

blue, purple, pink, red, orange and yellow

#### Value

a tag html shiny object.

42 text\_area\_Input

#### **Examples**

```
if (interactive()) {
    ui <- fluidPage(
        shinyGovstyle::header(
        main_text = "Example",
        secondary_text = "User Examples",
        logo="shinyGovstyle/images/moj_logo.png"),
        shinyGovstyle::gov_layout(size = "two-thirds",
            shinyGovstyle::tag_Input("tag1", "Complete"),
        shinyGovstyle::tag_Input("tag2", "Incomplete", "red")),
        shinyGovstyle::footer(full = TRUE)
)

server <- function(input, output, session) {}
    shinyApp(ui = ui, server = server)
}</pre>
```

text\_area\_Input

Text Area Input Function

## Description

This function create a text area input

## Usage

```
text_area_Input(
  inputId,
  label,
  hint_label = NULL,
  row_no = 5,
  error = FALSE,
  error_message = NULL,
  word_limit = NULL
)
```

## **Arguments**

inputId The input slot that will be used to access the value.

label Display label for the control, or NULL for no label.

hint\_label Display hint label for the control, or NULL for no hint label.

row\_no Size of the text entry box. Defaults to 5.

error Whenever to icnlud error handling Defaults to FALSE

error\_message Message to display on error. Defaults to NULL word\_limit Add a word limit to the display. Defaults to NULL.

text\_Input 43

## Value

a text area box html shiny object

#### **Examples**

```
text_area_Input("taId", "Can you provide more detail?",
"Do not include personal or financial information, like your
National Insurance number or credit card details.")
```

text\_Input

Text Input Function

## Description

This function create a text area input

#### Usage

```
text_Input(
  inputId,
  label,
  hint_label = NULL,
  type = "text",
  width = NULL,
  error = FALSE,
  error_message = NULL,
  prefix = NULL,
  suffix = NULL
)
```

#### **Arguments**

inputId The input slot that will be used to access the value.

label Display label for the control, or NULL for no label.

hint\_label Display hint label for the control, or NULL for no hint label.

type Type of text input to accept. Defaults to text.

width control the size of the box based on number of characters required. Options are

30, 20, 10, 5, 4, 3, 2. NULL will not limit the size

error Whenever to include error handling Defaults to FALSE.

error\_message Message to display on error. Defaults to NULL
prefix Add a prefix to the box. Defaults to NULL
suffix Add a suffix to the box. Defaults to NULL

## Value

a text input html shiny object

44 warning\_text

```
## Only run examples in interactive R sessions
if (interactive()) {
 ui <- fluidPage(</pre>
    # Required for error handling function
    shinyjs::useShinyjs(),
    shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::banner(
      inputId = "banner", type = "beta", 'This is a new service'),
    shinyGovstyle::gov_layout(size = "two-thirds",
      # Simple text box
      shinyGovstyle::text_Input(inputId = "eventId", label = "Event Name"),
      # Error text box
      shinyGovstyle::text_Input(
        inputId = "eventId2",
        label = "Event Name",
       hint_label = "This can be found on the letter",
        error = TRUE),
      # Button to trigger error
      shinyGovstyle::button_Input(inputId = "submit", label = "Submit")
   ),
   shinyGovstyle::footer(full = TRUE)
 server <- function(input, output, session) {</pre>
   #Trigger error on blank submit of eventId2
   observeEvent(input$submit, {
      if (input$eventId2 != ""){
        shinyGovstyle::error_off(inputId = "eventId2")
      } else {
        shinyGovstyle::error_on(
          inputId = "eventId2",
          error_message = "Please complete")
   })
 }
 # Run the application
 shinyApp(ui = ui, server = server)
}
```

word\_count 45

#### **Description**

This function create warning text

# Usage

```
warning_text(inputId, text)
```

#### **Arguments**

inputId The input slot that will be used to access the value.

text Text that goes in the main

#### Value

a warning box html shiny object

#### **Examples**

```
if (interactive()) {
 ui <- fluidPage(</pre>
   shinyGovstyle::header(
      main_text = "Example",
      secondary_text = "User Examples",
      logo="shinyGovstyle/images/moj_logo.png"),
    shinyGovstyle::gov_layout(size = "two-thirds",
      shinyGovstyle::warning_text(
        inputId = "warn1",
        text = "You can be fined up to £5,000 if you do not register.")
    ),
    shinyGovstyle::footer(full = TRUE)
 )
 server <- function(input, output, session) {}</pre>
 shinyApp(ui = ui, server = server)
}
```

word\_count

Word Count Function

## **Description**

This function create tracks the word count and should be used with the text area function

## Usage

```
word_count(inputId, input, word_limit = NULL)
```

46 word\_count

## Arguments

input

inputId The input slot of the text area that you want to affect

The text input that is associated with the box.

word\_limit Change the word limit if needed. Default will keep as what was used in text area

component

#### Value

no value returned. Updates the word count in a shiny app

```
if (interactive()) {
 ui <- shiny::fluidPage(</pre>
 shinyjs::useShinyjs(),
 shinyGovstyle::header(
    "Justice", "", logo="shinyGovstyle/images/moj_logo.png"),
 gov_layout(size = "full",
           text_area_Input(
             inputId = "text_area",
             label = "Can you provide more detail?",
             hint_label = "Do not include personal or financial information
                             , like your National Insurance number or credit
                            card details.",
             word_limit = 300)
 footer(TRUE)
 server <- function(input, output, session) {</pre>
 shiny::observeEvent(input$text_area,
               word_count(inputId = "text_area",
                          input = input$text_area
 )
 shinyApp(ui = ui, server = server)
