Package 'RPresto'

January 8, 2025

Title DBI Connector to Presto

Version 1.4.7

Copyright Meta Platforms, Inc. 2015-present.

Description Implements a 'DBI' compliant interface to Presto. Presto is an open source distributed SQL query engine for running interactive analytic queries against data sources of all sizes ranging from gigabytes to petabytes: https://prestodb.io/>.

Depends R (>= 3.1.0), methods

Imports DBI (>= 0.3.0), httr (>= 0.6), openssl, jsonlite, stringi, stats, utils, purrr, dplyr (>= 0.7.0), dbplyr (>= 2.3.3), tibble, bit64, rlang, lifecycle, lubridate, progress, vctrs

Suggests testthat, hms, knitr, rmarkdown, withr

add_chunk

Add a chunk field to a data frame

Description

This auxiliary function adds a field, if necessary, to a data frame so that each compartment of the data frame that corresponds to a unique combination of the chunk fields has a size below a certain threshold. This resulting data frame can then be safely used in dbAppendTable() because Presto has a size limit on any discrete INSERT INTO statement.

Usage

```
add_chunk(
  value,
  base_chunk_fields = NULL,
  chunk_size = 1e+06,
  new_chunk_field_name = "aux_chunk_idx"
)
```

dbCreateTableAs 3

Arguments

value The original data frame.

base_chunk_fields

A character vector of existing field names that are used to split the data frame before checking the chunk size.

chunk_size Maximum size (in bytes) of the VALUES statement encoding each unique chunk.

Default to 1,000,000 bytes (i.e. 1Mb).

new_chunk_field_name

A string indicating the new chunk field name. Default to "aux_chunk_idx".

Examples

```
## Not run:
# returns the original data frame because it's within size
add_chunk(iris)
# add a new aux_chunk_idx field
add_chunk(iris, chunk_size = 2000)
# the new aux_chunk_idx field is added on top of Species
add_chunk(iris, chunk_size = 2000, base_chunk_fields = c("Species"))
## End(Not run)
```

dbCreateTableAs

Create a table in database using a statement

Description

Create a table in database using a statement

Usage

```
dbCreateTableAs(conn, name, sql, overwrite = FALSE, with = NULL, ...)
```

Arguments

a PrestoConnection object, as returned by DBI::dbConnect(). conn The table name, passed on to DBI::dbQuoteIdentifier(). Options are: name • a character string with the unquoted DBMS table name, e.g. "table_name", • a call to DBI::Id() with components to the fully qualified table name, e.g. Id(schema = "my_schema", table = "table_name") • a call to DBI::SQL() with the quoted and fully qualified table name given verbatim, e.g. SQL('"my_schema"."table_name"') a character string containing SQL statement. sql overwrite A boolean indicating if an existing table should be overwritten. Default to FALSE. An optional WITH clause for the CREATE TABLE statement. with Other arguments used by individual methods. . . .

dbDataType,PrestoDriver-method

Return the corresponding presto data type for the given R object

Description

Return the corresponding presto data type for the given R object

Usage

```
## S4 method for signature 'PrestoDriver'
dbDataType(dbObj, obj, ...)
```

Arguments

```
db0bj A PrestoDriver object
obj Any R object
... Extra optional parameters, not currently used
```

Details

The default value for unknown classes is 'VARCHAR'.

Value

A character value corresponding to the Presto type for obj

```
drv <- RPresto::Presto()</pre>
dbDataType(drv, 1)
dbDataType(drv, NULL)
dbDataType(drv, as.POSIXct("2015-03-01 00:00:00", tz = "UTC"))
dbDataType(drv, Sys.time())
dbDataType(
  drv,
  list(
    c("a" = 1L, "b" = 2L),
c("a" = 3L, "b" = 4L)
  )
)
dbDataType(
  drv,
  list(
    c(as.Date("2015-03-01"), as.Date("2015-03-02")),
    c(as.Date("2016-03-01"), as.Date("2016-03-02"))
  )
dbDataType(drv, iris)
```

dbGetInfo,PrestoDriver-method

Metadata about database objects

Description

Metadata about database objects

For the PrestoResult object, the implementation returns the additional stats field which can be used to implement things like progress bars. See the examples section.

Usage

```
## S4 method for signature 'PrestoDriver'
dbGetInfo(dbObj)

## S4 method for signature 'PrestoConnection'
dbGetInfo(dbObj)

## S4 method for signature 'PrestoResult'
dbGetInfo(dbObj)
```

Arguments

db0bj

A PrestoDriver, PrestoConnection or PrestoResult object

Value

```
PrestoResult A list() with elements

statement The SQL sent to the database

row.count Number of rows fetched so far

has.completed Whether all data has been fetched

stats Current stats on the query
```

```
## Not run:
conn <- dbConnect(Presto(), "localhost", 7777, "onur", "datascience")
result <- dbSendQuery(conn, "SELECT * FROM jonchang_iris")
iris <- data.frame()
progress.bar <- NULL
while (!dbHasCompleted(result)) {
   chunk <- dbFetch(result)
   if (!NROW(iris)) {
      iris <- chunk
   } else if (NROW(chunk)) {
      iris <- rbind(iris, chunk)</pre>
```

6 dbRenameTable

```
}
stats <- dbGetInfo(result)[["stats"]]
if (is.null(progress.bar)) {
   progress.bar <- txtProgressBar(0, stats[["totalSplits"]], style = 3)
} else {
   setTxtProgressBar(progress.bar, stats[["completedSplits"]])
}
}
close(progress.bar)
## End(Not run)</pre>
```

dbplyr_edition.PrestoConnection

Inform the dbplyr version used in this package

Description

Inform the dbplyr version used in this package

Usage

```
## S3 method for class 'PrestoConnection'
dbplyr_edition(con)
```

Arguments

con

A DBIConnection object.

dbRenameTable

Rename a table

Description

Rename a table

Usage

```
dbRenameTable(conn, name, new_name, ...)
```

Arguments

conn A PrestoConnection.
name Existing table's name.
new_name New table name.

.. Extra arguments passed to dbExecute.

```
{\tt db\_list\_tables.PrestoConnection} \\ {\tt dbplyr\ database\ methods}
```

Description

dbplyr database methods

Usage

```
## S3 method for class 'PrestoConnection'
db_list_tables(con)
## S3 method for class 'PrestoConnection'
db_has_table(con, table)
## S3 method for class 'PrestoConnection'
db_write_table(
  con,
  table,
  types,
  values,
  temporary = FALSE,
  overwrite = FALSE,
 with = NULL
)
## S3 method for class 'PrestoConnection'
db_copy_to(
  con,
  table,
  values,
  overwrite = FALSE,
  types = NULL,
  temporary = TRUE,
  unique_indexes = NULL,
  indexes = NULL,
  analyze = TRUE,
  in_transaction = TRUE,
 with = NULL
)
## S3 method for class 'PrestoConnection'
db_compute(
  con,
```

8 kerberos_configs

```
table,
sql,
temporary = TRUE,
unique_indexes = list(),
indexes = list(),
analyze = TRUE,
with = NULL,
...
)

## S3 method for class 'PrestoConnection'
db_sql_render(con, sql, ..., use_presto_cte = TRUE)
```

Arguments

con A PrestoConnection as returned by dbConnect().

table Table name

types Column types. If not provided, column types are inferred using dbDataType.

values A data.frame.

temporary If a temporary table should be used. Not supported. Only FALSE is accepted.

overwrite If an existing table should be overwritten.

... Extra arguments to be passed to individual methods.

with An optional WITH clause for the CREATE TABLE statement.

unique_indexes, indexes, analyze, in_transaction

Ignored. Included for compatibility with generics.

sql A SQL statement.

use_presto_cte [Experimental] A logical value indicating if to use common table expressions

stored in PrestoConnection when possible. Default to TRUE. See vignette("common-table-expression of the common of

kerberos_configs A convenient wrapper around Kerberos config

Description

The configs specify authentication protocol and additional settings.

Usage

```
kerberos_configs(user = "", password = "", service_name = "presto")
```

Arguments

user User name to pass to httr::authenticate(). Default to "".
password Password to pass to httr::authenticate(). Default to "".

service_name The service name. Default to "presto".

Presto 9

Value

A httr::config() output that can be passed to the request.config argument of dbConnect().

Presto

Connect to a Presto database

Description

Connect to a Presto database

Usage

```
Presto(...)
## S4 method for signature 'PrestoDriver'
dbConnect(
  drv,
  catalog,
  schema,
  user,
 host = "localhost",
  port = 8080,
  source = methods::getPackageName(),
  session.timezone = "",
 output.timezone = "",
  parameters = list(),
  ctes = list(),
  request.config = httr::config(),
 use.trino.headers = FALSE,
 extra.credentials = "",
bigint = c("integer", "integer64", "numeric", "character"),
)
## S4 method for signature 'PrestoConnection'
dbDisconnect(conn)
```

Arguments

	currently ignored
drv	A driver object generated by Presto()
catalog	The catalog to be used
schema	The schema to be used
user	The current user
host	The presto host to connect to

10 Presto

port Port to use for the connection

source Source to specify for the connection

session.timezone

Time zone of the Presto server. Presto returns timestamps without time zones with respect to this value. The time arithmetic (e.g. adding hours) will also be done in the given time zone. This value is passed to Presto server via the request

headers.

output.timezone

The time zone using which TIME WITH TZ and TIMESTAMP values in the

 $output \ should \ be \ represented. \ Default \ to \ the \ Presto \ server \ timezone \ (use \ show (< Presto Connection>)$

to see).

parameters A list() of extra parameters to be passed in the 'X-Presto-Session' header

ctes [Experimental] A list of common table expressions (CTEs) that can be used in

the WITH clause. See vignette("common-table-expressions").

request.config An optional config list, as returned by httr::config(), to be sent with every

HTTP request.

use.trino.headers

A boolean to indicate whether Trino request headers should be used. Default to

FALSE.

extra.credentials

Extra credentials to be passed in the X-Presto-Extra-Credential or X-Trino-Extra-Credential header (depending on the value of the use.trino.headers ar-

gument). Default to an empty string.

bigint The R type that Presto's 64-bit integer (BIGINT) class should be translated to.

The default is "integer", which returns R's integer type, but results in NA for values above/below +/-2147483647. "integer64" returns a bit64::integer64, which allows the full range of 64 bit integers. "numeric" coerces into R's double type but might result in precision loss. Lastly, "character" casts into

R's character type.

conn A PrestoConnection object

Value

Presto A PrestoDriver object

DBI::dbConnect() A PrestoConnection object

DBI::dbDisconnect() A logical() value indicating success

```
## Not run:
conn <- dbConnect(Presto(),
   catalog = "hive", schema = "default",
   user = "onur", host = "localhost", port = 8080,
   session.timezone = "US/Eastern", bigint = "character"
)
dbListTables(conn, "%_iris")
dbDisconnect(conn)</pre>
```

presto_default 11

```
## End(Not run)
```

presto_default

Check if default database is available.

Description

presto_default() works similarly but returns a connection on success and throws a testthat skip condition on failure, making it suitable for use in tests.

RPresto examples and tests connect to a default database via dbConnect(Presto(), ...). This function checks if that database is available, and if not, displays an informative message.

Usage

```
presto_default(...)
presto_has_default(...)
```

Arguments

. . . Additional arguments passed on to DBI::dbConnect()

Examples

```
if (presto_has_default()) {
   db <- presto_default()
   print(dbListTables(db))
   dbDisconnect(db)
} else {
   message("No database connection.")
}</pre>
```

sqlCreateTableAs

Compose query to create a simple table using a statement

Description

Compose query to create a simple table using a statement

Usage

```
sqlCreateTableAs(con, name, sql, with = NULL, ...)
```

Arguments

A database connection. con The table name, passed on to DBI::dbQuoteIdentifier(). Options are: name • a character string with the unquoted DBMS table name, e.g. "table_name", • a call to DBI::Id() with components to the fully qualified table name, e.g. Id(schema = "my_schema", table = "table_name") • a call to DBI::SQL() with the quoted and fully qualified table name given verbatim, e.g. SQL('"my_schema"."table_name"') sql a character string containing SQL statement. with An optional WITH clause for the CREATE TABLE statement. Other arguments used by individual methods. $sql_query_save.PrestoConnection$ dbplyr SQL methods

Description

dbplyr SQL methods

Usage

```
## S3 method for class 'PrestoConnection'
sql_query_save(con, sql, name, temporary = TRUE, ..., with = NULL)
```

Arguments

con A database connection. sql a character string containing SQL statement. The table name, passed on to DBI::dbQuoteIdentifier(). Options are: name • a character string with the unquoted DBMS table name, e.g. "table_name", • a call to DBI::Id() with components to the fully qualified table name, e.g. Id(schema = "my_schema", table = "table_name") • a call to DBI::SQL() with the quoted and fully qualified table name given verbatim, e.g. SQL('"my_schema"."table_name"') If a temporary table should be created. Default to TRUE in the dbplyr::sql_query_save() temporary generic. The default value generates an error in Presto. Using temporary = FALSE to save the query in a permanent table. Other arguments used by individual methods. An optional WITH clause for the CREATE TABLE statement. with

src_presto 13

src_presto

dplyr integration to connect to a Presto database.

Description

Allows you to connect to an existing database through a presto connection.

Usage

```
src_presto(
  catalog = NULL,
  schema = NULL,
  user = NULL,
  host = NULL,
  port = NULL,
  source = NULL,
  session.timezone = NULL,
  parameters = NULL,
  bigint = c("integer", "integer64", "numeric", "character"),
  con = NULL,
  ...
)
```

Arguments

catalog Catalog to use in the connection
schema Schema to use in the connection
user User name to use in the connection
host Host name to connect to the database
port Port number to use with the host name
source Source to specify for the connection

session.timezone

Time zone for the connection

parameters Additional parameters to pass to the connection

bigint The R type that Presto's 64-bit integer (BIGINT) types should be translated to.

The default is "integer", which returns R's integer type, but results in NA for values above/below +/-2147483647. "integer64" returns a bit64::integer64, which allows the full range of 64 bit integers. "numeric" coerces into R's double type but might result in precision loss. Lastly, "character" casts into

R's character type.

con An object that inherits from PrestoConnection, typically generated by DBI::dbConnect.

When a valid connection object is supplied, Other arguments are ignored.

... For src_presto other arguments passed on to the underlying database connec-

tor dbConnect. For tbl.src_presto, it is included for compatibility with the

generic, but otherwise ignored.

src_presto

```
## Not run:
# To connect to a database
my_db <- src_presto(</pre>
 catalog = "memory",
  schema = "default",
  user = Sys.getenv("USER"),
  host = "http://localhost",
  port = 8080,
  session.timezone = "Asia/Kathmandu"
# Use a PrestoConnection
my_con <- DBI::dbConnect(</pre>
  catalog = "memory",
  schema = "default",
  user = Sys.getenv("USER"),
  host = "http://localhost",
  port = 8080,
  session.timezone = "Asia/Kathmandu"
)
my_db2 <- src_presto(con = my_con)</pre>
## End(Not run)
```
