Package 'arkhe'

July 29, 2024

```
Title Tools for Cleaning Rectangular Data
Version 1.7.0
Maintainer Nicolas Frerebeau <nicolas.frerebeau@u-bordeaux-montaigne.fr>
Description A dependency-free collection of simple functions for cleaning
      rectangular data. This package allows to detect, count and replace
      values or discard rows/columns using a predicate function. In
      addition, it provides tools to check conditions and return informative
      error messages.
License GPL (>= 3)

append

Convert Row Names to an Explicit Column

Description

Convert Row Names to an Explicit Column

Usage

```
append_rownames(x, ...)
## S4 method for signature 'data.frame'
append_rownames(x, after = 0, remove = TRUE, var = "rownames")
```

Arguments

A data.frame.
 Currently not used.
 A length-one numeric vector specifying a subscript, after which the row names are to be appended.
 A logical scalar: should the row names be removed?
 A character string giving the name of column to use for row names.

Value

A data.frame.

Author(s)

N. Frerebeau

```
Other data preparation tools: assign(), compact(), count(), detect(), discard(), get(), keep(), seek()
```

4 assert_constant

Examples

```
X <- data.frame(
  x = 1:5,
  y = 6:10,
  z = LETTERS[1:5]
)

## Assign column to row names
(Y <- assign_rownames(X, 3))

## Append row names to data.frame
(Z <- append_rownames(Y))</pre>
```

assert_constant

Check Numeric Trend

Description

Check Numeric Trend

Usage

```
assert_constant(x, ...)
assert_decreasing(x, ...)
assert_increasing(x, ...)
```

Arguments

A numeric object to be checked.

... Extra parameters to be passed to internal methods.

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

```
Other validation methods: assert_data, assert_length(), assert_lower(), assert_names(), assert_numeric, assert_package(), assert_square(), assert_type(), validate()
```

assert_data 5

assert_data

Check Data

Description

- assert_missing() and assert_infinite() check if an object contains any missing (NA, NaN) or infinite (Inf) value.
- assert_unique() checks if an object contains duplicated elements.

Usage

```
assert_missing(x)
assert_infinite(x)
assert_unique(x)
```

Arguments

Х

An object to be checked.

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

```
Other validation methods: assert_constant(), assert_length(), assert_lower(), assert_names(), assert_numeric, assert_package(), assert_square(), assert_type(), validate()
```

assert_length

Check Object Length/Dimensions

Description

Check Object Length/Dimensions

6 assert_lower

Usage

```
assert_length(x, expected, empty = FALSE)
assert_lengths(x, expected)
assert_empty(x)
assert_filled(x)
assert_dimensions(x, expected)
```

Arguments

x An object to be checked.

expected An appropriate expected value.

empty A logical scalar: should empty objects be ignored?

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

```
Other validation methods: assert_constant(), assert_data, assert_lower(), assert_names(), assert_numeric, assert_package(), assert_square(), assert_type(), validate()
```

assert_lower

Check Numeric Relations

Description

Check Numeric Relations

Usage

```
assert_lower(x, y, ...)
assert_greater(x, y, ...)
```

Arguments

x, y A numeric object to be checked.

... Extra parameters to be passed to internal methods.

assert_names 7

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

```
Other validation methods: assert_constant(), assert_data, assert_length(), assert_names(), assert_numeric, assert_package(), assert_square(), assert_type(), validate()
```

assert_names

Check Object Names

Description

Check Object Names

Usage

```
assert_names(x, expected)
assert_dimnames(x, expected)
assert_rownames(x, expected)
assert_colnames(x, expected)
```

Arguments

x An object to be checked.expected An appropriate expected value.

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

```
Other validation methods: assert_constant(), assert_data, assert_length(), assert_lower(), assert_numeric, assert_package(), assert_square(), assert_type(), validate()
```

8 assert_numeric

assert_numeric

Check Numeric Values

Description

Check Numeric Values

Usage

```
assert_count(x, na.rm = FALSE, ...)
assert_whole(x, na.rm = FALSE, ...)
assert_positive(x, na.rm = FALSE, ...)
assert_negative(x, na.rm = FALSE, ...)
assert_odd(x, na.rm = FALSE, ...)
assert_even(x, na.rm = FALSE, ...)
```

Arguments

x A numeric object to be checked.
 na.rm A logical scalar: should missing values (including NaN) be omitted?
 ... Extra parameters to be passed to internal methods.

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

```
Other validation methods: assert_constant(), assert_data, assert_length(), assert_lower(), assert_names(), assert_package(), assert_square(), assert_type(), validate()
```

assert_package 9

assert_package

Check the Availability of a Package

Description

Check the Availability of a Package

Usage

```
assert_package(x, ask = TRUE)
needs(x, ask = TRUE)
```

Arguments

x A character vector naming the packages to check.

ask A logical scalar: should the user be asked to select packages before they are

downloaded and installed?

Details

assert_package() is designed for use inside other functions in your own package to check for the availability of a suggested package.

If the required packages are not available and R is running interactively, the user will be asked to install the packages.

```
needs() is an alias for assert_package().
```

Value

Invisibly returns NULL.

Author(s)

N. Frerebeau

```
Other validation methods: assert_constant(), assert_data, assert_length(), assert_lower(), assert_names(), assert_numeric, assert_square(), assert_type(), validate()
```

10 assert_type

assert_square

Check Matrix

Description

Check Matrix

Usage

```
assert_square(x)
assert_symmetric(x)
```

Arguments

Х

A matrix to be checked.

Value

Throw an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

```
Other validation methods: assert_constant(), assert_data, assert_length(), assert_lower(), assert_names(), assert_numeric, assert_package(), assert_type(), validate()
```

assert_type

Check Data Types

Description

Check Data Types

Usage

```
assert_type(x, expected)
assert_scalar(x, expected)
assert_function(x)
```

assign 11

Arguments

Value

Throws an error, if any, and returns x invisibly otherwise.

Author(s)

N. Frerebeau

See Also

```
Other validation methods: assert_constant(), assert_data, assert_length(), assert_lower(), assert_names(), assert_numeric, assert_package(), assert_square(), validate()
```

assign

Assign a Specific Row/Column to the Column/Row Names

Description

Assign a Specific Row/Column to the Column/Row Names

Usage

```
assign_colnames(x, ...)
assign_rownames(x, ...)
## S4 method for signature 'data.frame'
assign_rownames(x, column, remove = TRUE)
## S4 method for signature 'data.frame'
assign_colnames(x, row, remove = TRUE)
```

Arguments

X	A data.frame.
	Currently not used.
column	A length-one numeric vector specifying the column number that is to become the row names.
remove	A logical scalar: should the specified row/column be removed after making it the column/row names?
row	A length-one numeric vector specifying the row number that is to become the column names.

12 bootstrap

Value

```
A data.frame.
```

Author(s)

N. Frerebeau

See Also

```
Other data preparation tools: append(), compact(), count(), detect(), discard(), get(), keep(), seek()
```

Examples

```
X <- data.frame(
  x = 1:5,
  y = 6:10,
  z = LETTERS[1:5]
)

## Assign column to row names
(Y <- assign_rownames(X, 3))

## Append row names to data.frame
(Z <- append_rownames(Y))</pre>
```

bootstrap

Bootstrap Estimation

Description

Samples randomly from the elements of object with replacement.

Usage

```
bootstrap(object, ...)
## S4 method for signature 'numeric'
bootstrap(object, do, n, ..., f = NULL)
```

Arguments

object	A numeric vector.
	Extra arguments to be passed to do.
do	A function that takes object as an argument and returns a single numeric value.
n	A non-negative integer giving the number of bootstrap replications.
f	A function that takes a single numeric vector (the result of do) as argument.

clean_whitespace 13

Value

If f is NULL (the default), bootstrap() returns a named numeric vector with the following elements:

original The observed value of do applied to object.

mean The bootstrap estimate of mean of do.

bias The bootstrap estimate of bias of do.

error he bootstrap estimate of standard error of do.

If f is a function, bootstrap() returns the result of f applied to the n values of do.

Author(s)

N. Frerebeau

See Also

Other resampling methods: jackknife()

Examples

```
x <- rnorm(20)
## Bootstrap
bootstrap(x, do = mean, n = 100)
## Estimate the 25th and 95th percentiles
quant <- function(x) { quantile(x, probs = c(0.25, 0.75)) }
bootstrap(x, n = 100, do = mean, f = quant)
## Get the n bootstrap values
bootstrap(x, n = 100, do = mean, f = function(x) { x })
## Jackknife
jackknife(x, do = mean) # Sample mean
## Get the leave-one-out values instead of summary
jackknife(x, do = mean, f = function(x) { x })</pre>
```

clean_whitespace

Remove Leading/Trailing Whitespace

Description

Remove Leading/Trailing Whitespace

14 compact

Usage

```
clean_whitespace(x, ...)
## S4 method for signature 'data.frame'
clean_whitespace(x, which = c("both", "left", "right"), squish = TRUE)
## S4 method for signature 'matrix'
clean_whitespace(x, which = c("both", "left", "right"), squish = TRUE)
```

Arguments

An R object (should be a matrix or a data.frame).

Currently not used.

A character string specifying whether to remove both leading and trailing whitespace (default), or only leading ("left") or trailing ("right").

Squish A logical scalar: should all internal whitespace be replaced with a single space?

Author(s)

N. Frerebeau

See Also

```
trimws()
```

```
Other data cleaning tools: remove_Inf(), remove_NA(), remove_constant(), remove_empty(), remove_zero(), replace_Inf(), replace_NA(), replace_empty(), replace_zero()
```

Examples

```
x <- data.frame(
  A = c(" Both ", " Left", "Right "),
  B = 1:3
)

clean_whitespace(x, which = "both")
clean_whitespace(x, which = "left")
clean_whitespace(x, which = "right")</pre>
```

compact

Remove Empty Rows/Columns

Description

Removes empty rows/columns in an array-like object.

compact 15

Usage

```
compact(x, ...)

compact_cols(x, ...)

compact_rows(x, ...)

## S4 method for signature 'ANY'

compact(x, margin = 1, na.rm = FALSE, verbose = getOption("arkhe.verbose"))

## S4 method for signature 'ANY'

compact_cols(x, na.rm = FALSE, verbose = getOption("arkhe.verbose"))

## S4 method for signature 'ANY'

compact_rows(x, na.rm = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

Х	An R object (should be a matrix or a data.frame).
	Currently not used.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?
verbose	A logical scalar: should R report extra information on progress?

Details

A row/column is empty if it contains only zeros (if of type numeric) or zero length character strings (if of type character).

Author(s)

N. Frerebeau

See Also

```
Other data preparation tools: append(), assign(), count(), detect(), discard(), get(), keep(), seek()
```

Examples

```
## Create a data.frame
X <- data.frame(A = 0, B = 1:5, C = 6, D = "", F = letters[1:5])
X
## Remove empty columns
compact(X, margin = 2)</pre>
```

16 confidence_binomial

concat

Concatenate

Description

Concatenates character vectors.

Usage

```
x %+% y
```

Arguments

x, y

A character vector.

Value

A character vector.

See Also

Other utilities: null

confidence_binomial

Confidence Interval for Binomial Proportions

Description

Computes a Wald interval for a proportion at a desired level of significance.

Usage

```
confidence_binomial(object, ...)

## S4 method for signature 'numeric'
confidence_binomial(
  object,
  n,
  level = 0.95,
  method = "wald",
  corrected = FALSE
)
```

confidence_mean 17

Arguments

object A numeric vector giving the number of success.

... Currently not used.

n A length-one numeric vector giving the number of trials.

level A length-one numeric vector giving the confidence level. Must be a single number between 0 and 1.

method A character string specifying the method to be used. Any unambiguous substring can be used.

corrected A logical scalar: should continuity correction be used? Only used if method

is "wald".

Value

A length-two numeric vector giving the lower and upper confidence limits.

Author(s)

N. Frerebeau

See Also

```
Other summary statistics: confidence_mean(), confidence_multinomial(), interval_credible(), interval_hdr()
```

Examples

```
## Confidence interval for a mean
x <- seq(from = -4, to = 4, by = 0.01)
y <- dnorm(x)

confidence_mean(y, type = "student")
confidence_mean(y, type = "normal")

## Confidence interval for a propotion
confidence_binomial(118, n = 236)

x <- c(35, 74, 22, 69)
confidence_multinomial(x)</pre>
```

confidence_mean

Confidence Interval for a Mean

Description

Computes a confidence interval for a mean at a desired level of significance.

18 confidence_mean

Usage

```
confidence_mean(object, ...)
## S4 method for signature 'numeric'
confidence_mean(object, level = 0.95, type = c("student", "normal"))
```

Arguments

object A numeric vector.
... Currently not used.

level A length-one numeric vector giving the confidence level. Must be a single

number between 0 and 1.

type A character string giving the type of confidence interval to be returned. It must

be one "student" (the default) or "normal". Any unambiguous substring can

be given.

Value

A length-two numeric vector giving the lower and upper confidence limits.

Author(s)

N. Frerebeau

See Also

```
Other summary statistics: confidence_binomial(), confidence_multinomial(), interval_credible(), interval_hdr()
```

Examples

```
## Confidence interval for a mean
x <- seq(from = -4, to = 4, by = 0.01)
y <- dnorm(x)

confidence_mean(y, type = "student")
confidence_mean(y, type = "normal")

## Confidence interval for a propotion
confidence_binomial(118, n = 236)

x <- c(35, 74, 22, 69)
confidence_multinomial(x)</pre>
```

confidence_multinomial

```
confidence_multinomial
```

Confidence Interval for Multinomial Proportions

Description

Computes a Wald interval for a proportion at a desired level of significance.

Usage

```
confidence_multinomial(object, ...)
## S4 method for signature 'numeric'
confidence_multinomial(
  object,
  level = 0.95,
  method = "wald",
  corrected = FALSE
)
```

Arguments

object	A numeric vector of positive integers giving the number of occurrences of each class.
	Currently not used.
level	A length-one numeric vector giving the confidence level. Must be a single number between 0 and 1 .
method	A character string specifying the method to be used. Any unambiguous substring can be used.
corrected	A logical scalar: should continuity correction be used? Only used if method is "wald".

Value

A two column numeric matrix giving the lower and upper confidence limits.

Author(s)

N. Frerebeau

```
Other summary statistics: confidence_binomial(), confidence_mean(), interval_credible(), interval_hdr()
```

20 count

Examples

```
## Confidence interval for a mean
x <- seq(from = -4, to = 4, by = 0.01)
y <- dnorm(x)

confidence_mean(y, type = "student")
confidence_mean(y, type = "normal")

## Confidence interval for a propotion
confidence_binomial(118, n = 236)

x <- c(35, 74, 22, 69)
confidence_multinomial(x)</pre>
```

count

Count Values Using a Predicate

Description

Counts values by rows/columns using a predicate function.

Usage

```
count(x, ...)
## S4 method for signature 'data.frame'
count(x, f, margin = 1, negate = FALSE, na.rm = FALSE, ...)
## S4 method for signature 'matrix'
count(x, f, margin = 1, negate = FALSE, na.rm = FALSE, ...)
```

Arguments

x	An R object (should be a matrix or a data.frame).
	Further arguments to be passed to f.
f	A predicate function.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
negate	A logical scalar: should the negation of f be used instead of f?
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?

Value

A numeric vector.

describe 21

Author(s)

N. Frerebeau

See Also

```
Other data preparation tools: append(), assign(), compact(), detect(), discard(), get(), keep(), seek()
```

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)
## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X
## Count missing values in rows
count(X, f = is.na, margin = 1)
## Count non-missing values in columns
count(X, f = is.na, margin = 2, negate = TRUE)</pre>
```

describe

Data Description

Description

Describes an object.

Usage

```
describe(x, ...)
## S4 method for signature 'ANY'
describe(x)
```

Arguments

```
x An R object (should be a matrix or a data.frame).... Currently not used.
```

Value

describe() is called for its side-effects. Invisibly returns x.

Author(s)

N. Frerebeau

22 detect

See Also

Other data summaries: sparsity()

Examples

```
## Create a data matrix
X <- matrix(sample(0:9, 15, TRUE), nrow = 3, ncol = 5)
## Add NA
k <- sample(1:15, 3, FALSE)
X[k] <- NA
## Sparsity
sparsity(X)
## Quick description
describe(X)</pre>
```

detect

Find Rows/Columns Using a Predicate

Description

Finds rows/columns in an array-like object using a predicate function.

Usage

```
detect(x, ...)
## S4 method for signature 'ANY'
detect(x, f, margin = 1, negate = FALSE, all = FALSE, na.rm = FALSE, ...)
```

Arguments

X	An R object (should be a matrix or a data.frame).
	Further arguments to be passed to f.
f	A predicate function.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
negate	A logical scalar: should the negation of f be used instead of f?
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?

discard 23

Value

A logical vector.

Author(s)

N. Frerebeau

See Also

```
Other data preparation tools: append(), assign(), compact(), count(), discard(), get(), keep(), seek()
```

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)
## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X
## Find row with NA
detect(X, f = is.na, margin = 1)
## Find column without any NA
detect(X, f = is.na, margin = 2, negate = TRUE, all = TRUE)</pre>
```

discard

Remove Rows/Columns Using a Predicate

Description

Removes rows/columns in an array-like object using a predicate function.

Usage

```
discard(x, ...)
discard_cols(x, ...)
discard_rows(x, ...)

## S4 method for signature 'ANY'
discard(
    x,
    f,
    margin = 1,
    negate = FALSE,
```

24 discard

```
all = FALSE,
 na.rm = FALSE,
 verbose = getOption("arkhe.verbose"),
)
## S4 method for signature 'ANY'
discard_rows(
 х,
 f,
 negate = FALSE,
 all = FALSE,
 na.rm = FALSE,
 verbose = getOption("arkhe.verbose"),
)
## S4 method for signature 'ANY'
discard_cols(
 Х,
 f,
 negate = FALSE,
 all = FALSE,
 na.rm = FALSE,
 verbose = getOption("arkhe.verbose"),
)
```

Arguments

x	An R object (should be a matrix or a data.frame).
	Further arguments to be passed to f.
f	A predicate function.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
negate	A logical scalar: should the negation of f be used instead of f?
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
na.rm	A logical scalar: should NA values be stripped before the computation proceeds?
verbose	A logical scalar: should R report extra information on progress?

Author(s)

N. Frerebeau

get 25

See Also

```
Other data preparation tools: append(), assign(), compact(), count(), detect(), get(), keep(), seek()
```

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)
## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X
## Remove row with any NA
discard(X, f = is.na, margin = 1, all = FALSE)
## Remove column with any NA
discard(X, f = is.na, margin = 2, all = FALSE)</pre>
```

get

Get Rows/Columns by Name

Description

Returns rows/columns selected by name in an array-like object.

Usage

```
get_columns(x, ...)
get_rows(x, ...)
## S4 method for signature 'data.frame'
get_columns(x, select = NULL, ...)
## S4 method for signature 'data.frame'
get_rows(x, select = NULL, ...)
```

Arguments

```
    An R object (should be a matrix or a data.frame).
    Further arguments to be passed to select.
    A function to be applied to the row/colum names (e.g. startsWith()). Must return a single integer or logical vector.
```

Value

An object of the same sort as x.

26 interval_credible

Author(s)

N. Frerebeau

See Also

```
Other data preparation tools: append(), assign(), compact(), count(), detect(), discard(), keep(), seek()
```

Examples

```
## Seek columns
seek_columns(iris, select = startsWith, prefix = "Sepal")
## Get columns
x <- get_columns(iris, select = startsWith, prefix = "Sepal")
head(x)</pre>
```

interval_credible

Bayesian Credible Interval

Description

Computes the shortest credible interval within which an unobserved parameter value falls with a particular probability.

Usage

```
interval_credible(x, ...)
## S4 method for signature 'numeric'
interval_credible(x, level = 0.95)
```

Arguments

x A numeric vector.
... Currently not used.

level A length-one numeric vector giving the confidence level.

Value

A three-columns numeric matrix giving the lower and upper boundaries of the credible interval and associated probability.

Author(s)

N. Frerebeau

interval_hdr 27

See Also

```
Other summary statistics: confidence_binomial(), confidence_mean(), confidence_multinomial(), interval_hdr()
```

Examples

```
## HDR of the Old Faithful eruption times
interval_hdr(faithful$eruptions)
```

interval_hdr

Highest Density Regions

Description

Highest Density Regions

Usage

```
interval_hdr(x, y, ...)
## S4 method for signature 'numeric,numeric'
interval_hdr(x, y, level = 0.954)
## S4 method for signature 'numeric,missing'
interval_hdr(x, level = 0.954, ...)
```

Arguments

Х	A numeric vector giving the coordinates of the points where the density is estimated.
у	A numeric vector giving the estimated density values. If y is missing and x is a numeric vector, density estimates will be computed from x .
	Further arguments to be passed to stats::density().
level	A length-one numeric vector giving the confidence level.

Value

A three-columns numeric matrix giving the lower and upper boundaries of the HPD interval and associated probabilities.

Author(s)

N. Frerebeau

is_scalar

Scalar Type Predicates

Description

Scalar Type Predicates

Usage

```
is_scalar_list(x)
is_scalar_atomic(x)
is_scalar_vector(x)
is_scalar_numeric(x)
is_scalar_integer(x)
is_scalar_double(x)
is_scalar_character(x)
is_scalar_logical(x)
```

Arguments

Х

An object to be tested.

Value

A logical scalar.

See Also

Other predicates: predicate-matrix, predicate-numeric, predicate-trend, predicate-type, predicate-utils

jackknife 29

jackknife

Jackknife Estimation

Description

Jackknife Estimation

Usage

```
jackknife(object, ...)
## S4 method for signature 'numeric'
jackknife(object, do, ..., f = NULL)
```

Arguments

object A numeric vector.

... Extra arguments to be passed to do.

do A function that takes object as an argument and returns a single numeric

value.

f A function that takes a single numeric vector (the leave-one-out values of do)

as argument.

Value

If f is NULL (the default), jackknife() returns a named numeric vector with the following elements:

original The observed value of do applied to object.

mean The jackknife estimate of mean of do.

bias The jackknife estimate of bias of do.

error he jackknife estimate of standard error of do.

If f is a function, jackknife() returns the result of f applied to the leave-one-out values of do.

Author(s)

N. Frerebeau

See Also

Other resampling methods: bootstrap()

30 keep

Examples

```
x <- rnorm(20)
## Bootstrap
bootstrap(x, do = mean, n = 100)

## Estimate the 25th and 95th percentiles
quant <- function(x) { quantile(x, probs = c(0.25, 0.75)) }
bootstrap(x, n = 100, do = mean, f = quant)

## Get the n bootstrap values
bootstrap(x, n = 100, do = mean, f = function(x) { x })

## Jackknife
jackknife(x, do = mean) # Sample mean

## Get the leave-one-out values instead of summary
jackknife(x, do = mean, f = function(x) { x })</pre>
```

keep

Keep Rows/Columns Using a Predicate

Description

Keeps rows/columns in an array-like object using a predicate function.

Usage

```
keep(x, ...)
keep_cols(x, ...)

## S4 method for signature 'ANY'
keep(
    x,
    f,
    margin = 1,
    negate = FALSE,
    all = FALSE,
    na.rm = FALSE,
    verbose = getOption("arkhe.verbose"),
    ...
)

## S4 method for signature 'ANY'
keep_rows(
```

keep 31

```
Х,
  f,
  negate = FALSE,
  all = FALSE,
 na.rm = FALSE,
 verbose = getOption("arkhe.verbose"),
)
## S4 method for signature 'ANY'
keep_cols(
 х,
  f,
 negate = FALSE,
 all = FALSE,
  na.rm = FALSE,
 verbose = getOption("arkhe.verbose"),
)
```

Arguments

X	An R object (should be a matrix or a data.frame).
	Further arguments to be passed to f.

f A predicate function.

margin A length-one numeric vector giving the subscripts which the function will be

applied over (1 indicates rows, 2 indicates columns).

negate A logical scalar: should the negation of f be used instead of f?

all A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns

where at least one value validates the condition defined by f are considered.

na.rm A logical scalar: should NA values be stripped before the computation pro-

ceeds?

verbose A logical scalar: should R report extra information on progress?

```

32 math_gcd

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)
## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X

## Keep row without any NA
keep(X, f = is.na, margin = 1, negate = TRUE, all = TRUE)
## Keep row without any NA
keep(X, f = is.na, margin = 2, negate = TRUE, all = TRUE)</pre>
```

math_gcd

Greatest Common Divisor

Description

Computes the greatest common divisor (GCD) of two integer using the Euclidean algorithm.

Usage

```
math_gcd(x, y)
## S4 method for signature 'numeric,numeric'
math_gcd(x, y)
```

Arguments

x, y

A numeric vector.

Value

A numeric vector.

Author(s)

N. Frerebeau

See Also

Other mathematic functions: math_lcm()

math_lcm 33

math_lcm

Least Common Multiple

Description

Computes the lowest common multiple of the denominators of a set of fractions.

Usage

```
math_lcm(x, y)
## S4 method for signature 'numeric,numeric'
math_lcm(x, y)
```

Arguments

x, y

A numeric vector.

Value

A numeric vector.

Author(s)

N. Frerebeau

See Also

Other mathematic functions: math_gcd()

null

Default value for NULL

Description

Replaces NULL with a default value.

Usage

```
x %||% y
```

Arguments

x, y

An object.

34 predicate-numeric

Value

If x is NULL, returns y; otherwise returns x.

See Also

Other utilities: concat

predicate-matrix

Matrix Predicates

Description

- is_square() checks if a matrix is square.
- is_symmetric() checks if a matrix is symmetric.

Usage

```
is_square(x)
is_symmetric(x)
```

Arguments

х

A matrix to be tested.

Value

A logical scalar.

See Also

Other predicates: is_scalar, predicate-numeric, predicate-trend, predicate-type, predicate-utils

predicate-numeric

Numeric Predicates

Description

Check numeric objects:

- is_zero() checks if an object contains only zeros.
- is_odd() and is_even() check if a number is odd or even, respectively.
- is_positive() and is_negative check if an object contains only (strictly) positive or negative numbers.
- is_whole() checks if an object only contains whole numbers.

predicate-trend 35

Usage

```
is_zero(x, tolerance = sqrt(.Machine$double.eps), ...)
is_odd(x, ...)
is_even(x, ...)
is_positive(x, strict = FALSE, ...)
is_negative(x, strict = FALSE, ...)
is_whole(x, tolerance = sqrt(.Machine$double.eps), ...)
```

Arguments

x A numeric object to be tested.tolerance A numeric scalar giving the tolerance to check within.

... Currently not used.

strict A logical scalar: should strict inequality be used?

Value

A logical vector.

See Also

Other predicates: is_scalar, predicate-matrix, predicate-trend, predicate-type, predicate-utils

predicate-trend Numeric Trend Predicates

Description

Check numeric objects:

- is_constant() checks for equality among all elements of a vector.
- is_increasing() and is_decreasing() check if a sequence of numbers is monotonically increasing or decreasing, respectively.

Usage

```
is_constant(x, tolerance = sqrt(.Machine$double.eps), na.rm = FALSE)
is_increasing(x, na.rm = FALSE)
is_decreasing(x, na.rm = FALSE)
```

36 predicate-type

```
is_greater(x, y, strict = FALSE, na.rm = FALSE)
is_lower(x, y, strict = FALSE, na.rm = FALSE)
```

Arguments

x, y A numeric object to be tested.

tolerance A numeric scalar giving the tolerance to check within.

na.rm A logical scalar: should missing values (including NaN) be omitted?

strict A logical scalar: should strict inequality be used?

Value

A logical scalar.

See Also

Other predicates: is_scalar, predicate-matrix, predicate-numeric, predicate-type, predicate-utils

predicate-type

Type Predicates

Description

Type Predicates

Usage

```
is_list(x)
```

is_atomic(x)

is_vector(x)

is_numeric(x)

is_integer(x)

is_double(x)

is_character(x)

is_logical(x)

is_error(x)

predicate-utils 37

```
is_warning(x)
is_message(x)
```

Arguments

Х

An object to be tested.

Value

A logical scalar.

See Also

Other predicates: is_scalar, predicate-matrix, predicate-numeric, predicate-trend, predicate-utils

predicate-utils

Utility Predicates

Description

- is_empty() checks is an object is empty (any zero-length dimensions).
- has_length() checks how long is an object.
- has_names() checks if an object is named.
- has_duplicates() checks if an object has duplicated elements.
- has_missing() and has_infinite() check if an object contains missing or infinite values.

```
has_length(x, n = NULL)
is_empty(x)
has_names(x, names = NULL)
has_missing(x)
has_infinite(x)
is_unique(x, tolerance = sqrt(.Machine$double.eps), na.rm = FALSE)
has_duplicates(x)
```

38 remove_constant

Arguments

x A vector to be tested.

n A length-one numeric vector specifying the length to test x with. If NULL, re-

turns TRUE if x has length greater than zero, and FALSE otherwise.

names A character vector specifying the names to test x with. If NULL, returns TRUE

if x has names, and FALSE otherwise.

tolerance A numeric scalar giving the tolerance to check within (for numeric vector).

na.rm A logical scalar: should missing values (including NaN) be omitted?

Value

A logical scalar.

See Also

Other predicates: is_scalar, predicate-matrix, predicate-numeric, predicate-trend, predicate-type

remove_constant Remove Constant Columns

Description

Remove Constant Columns

Usage

```
remove_constant(x, ...)
## S4 method for signature 'ANY'
remove_constant(x, na.rm = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

x An R object (should be a matrix or a data. frame).

... Currently not used.

na.rm A logical scalar: should NA values be stripped before the computation pro-

ceeds?

verbose A logical scalar: should R report extra information on progress?

Author(s)

remove_empty 39

See Also

```
Other data cleaning tools: clean_whitespace(), remove_Inf(), remove_NA(), remove_empty(), remove_zero(), replace_Inf(), replace_NA(), replace_empty(), replace_zero()
```

Examples

```
## Create a data.frame
X <- data.frame(A = 1, B = 1:3)
X

remove_constant(X)

## Add NA
X[1, 1] <- NA
remove_constant(X)
remove_constant(X, na.rm = TRUE)</pre>
```

remove_empty

Remove Rows/Columns with Empty String

Description

Removes rows/columns that contain empty strings.

Usage

```
remove_empty(x, ...)
## S4 method for signature 'ANY'
remove_empty(x, margin = 1, all = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

An R object (should be a matrix or a data.frame).

Currently not used.

A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).

A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.

Verbose

A logical scalar: should R report extra information on progress?

Author(s)

40 remove_Inf

See Also

```
Other data cleaning tools: clean_whitespace(), remove_Inf(), remove_NA(), remove_constant(), remove_zero(), replace_Inf(), replace_MA(), replace_empty(), replace_zero()
```

Examples

```
## Create a data matrix
X <- matrix(sample(LETTERS, 25, TRUE), nrow = 5, ncol = 5)

## Add empty string
k <- sample(1:25, 3, FALSE)
X[k] <- ""
X

## Remove rows with empty strings
remove_empty(X, margin = 1)

## Replace empty strings
replace_empty(X, value = "XXX")</pre>
```

remove_Inf

Remove Rows/Columns with Infinite Values

Description

Removes rows/columns that contain infinite values.

Usage

```
remove_Inf(x, ...)
## S4 method for signature 'ANY'
remove_Inf(x, margin = 1, all = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

X	An R object (should be a matrix or a data.frame).
	Currently not used.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
verbose	A logical scalar: should R report extra information on progress?

Author(s)

remove_NA 41

See Also

```
Other data cleaning tools: clean_whitespace(), remove_NA(), remove_constant(), remove_empty(), remove_zero(), replace_Inf(), replace_NA(), replace_empty(), replace_zero()
```

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)
## Add Inf
k <- sample(1:25, 3, FALSE)
X[k] <- Inf
X
## Remove rows with Inf
remove_Inf(X, margin = 1)
## Replace Inf with zeros
replace_Inf(X, value = 0)</pre>
```

remove_NA

Remove Rows/Columns with Missing Values

Description

Removes rows/columns that contain missing values.

Usage

```
remove_NA(x, ...)
## S4 method for signature 'ANY'
remove_NA(x, margin = 1, all = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

X	An R object (should be a matrix or a data.frame).
	Currently not used.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
verbose	A logical scalar: should R report extra information on progress?

Author(s)

42 remove_zero

See Also

```

## Add NA
k <- sample(1:25, 3, FALSE)
X[k] <- NA
X
## Remove rows with NA
remove_NA(X, margin = 1)
## Replace NA with zeros
replace_NA(X, value = 0)</pre>
```

remove_zero

Remove Rows/Columns with Zeros

Description

Removes rows/columns that contain zeros.

Usage

```
remove_zero(x, ...)
## S4 method for signature 'ANY'
remove_zero(x, margin = 1, all = FALSE, verbose = getOption("arkhe.verbose"))
```

Arguments

X	An R object (should be a matrix or a data. frame).
	Currently not used.
margin	A length-one numeric vector giving the subscripts which the function will be applied over (1 indicates rows, 2 indicates columns).
all	A logical scalar. If TRUE, only the rows/columns whose values all meet the condition defined by f are considered. If FALSE (the default), only rows/columns where at least one value validates the condition defined by f are considered.
verbose	A logical scalar: should R report extra information on progress?

```

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)
## Add zero
k <- sample(1:25, 3, FALSE)
X[k] <- 0
X
## Remove rows with zero
remove_zero(X, margin = 1)
## Replace zero
replace_zero(X, value = 1)</pre>
```

replace_empty

Replace Empty String

Description

Replaces empty strings.

Usage

```
replace_empty(x, ...)
## S4 method for signature 'matrix'
replace_empty(x, value)
## S4 method for signature 'data.frame'
replace_empty(x, value)
```

Arguments

```
x An R object (should be a matrix or a data.frame).... Currently not used.value A possible replacement value.
```

Author(s)

replace_Inf

See Also

## Add empty string
k <- sample(1:25, 3, FALSE)
X[k] <- ""
X

## Remove rows with empty strings
remove_empty(X, margin = 1)
## Replace empty strings
replace_empty(X, value = "XXX")</pre>
```

replace_Inf

Replace Infinite Values

Description

Replaces infinite values values.

Usage

```
replace_Inf(x, ...)
## S4 method for signature 'matrix'
replace_Inf(x, value = 0)
## S4 method for signature 'data.frame'
replace_Inf(x, value = 0)
```

Arguments

```
x An R object (should be a matrix or a data.frame).... Currently not used.value A possible replacement value.
```

X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)
## Add Inf
k <- sample(1:25, 3, FALSE)
X[k] <- Inf
X
## Remove rows with Inf
remove_Inf(X, margin = 1)
## Replace Inf with zeros
replace_Inf(X, value = 0)</pre>
```

replace_NA

Replace Missing Values

Description

Replaces missing values values.

Usage

```
replace_NA(x, ...)
## S4 method for signature 'matrix'
replace_NA(x, value = 0)
## S4 method for signature 'data.frame'
replace_NA(x, value = 0)
```

Arguments

```
x An R object (should be a matrix or a data.frame).... Currently not used.value A possible replacement value.
```

```

Examples

```
## Create a data matrix
X <- matrix(sample(1:10, 25, TRUE), nrow = 5, ncol = 5)

## Add zero
k <- sample(1:25, 3, FALSE)
X[k] <- 0
X

## Remove rows with zero
remove_zero(X, margin = 1)

## Replace zero
replace_zero(X, value = 1)</pre>
```

scale_midpoint

Rescale Continuous Vector (minimum, midpoint, maximum)

Description

Rescales continuous vector to have specified minimum, midpoint and maximum.

Usage

```
scale_midpoint(x, to = c(0, 1), from = range(x, finite = TRUE), midpoint = 0)
```

Arguments

x A numeric vector.

to A length-two numeric vector specifying the output range. from A length-two numeric vector specifying the input range.

midpoint A length-one numeric vector specifying the mid-point of input range.

Value

A numeric vector.

Note

For internal use only.

See Also

Other scales: scale_range()

48 seek

scale_range

Rescale Continuous Vector (minimum, maximum)

Description

Rescales continuous vector to have specified minimum and maximum.

Usage

```
scale\_range(x, to = c(0, 1), from = range(x, finite = TRUE))
```

Arguments

x A numeric vector.

to A length-two numeric vector specifying the output range. from A length-two numeric vector specifying the input range.

Value

A numeric vector.

Note

For internal use only.

See Also

Other scales: scale_midpoint()

seek

Search Rows/Columns by Name

Description

Searches rows/columns by name in an array-like object.

```
seek_columns(x, ...)
seek_rows(x, ...)
## S4 method for signature 'data.frame'
seek_rows(x, select = NULL, ...)
## S4 method for signature 'data.frame'
seek_columns(x, select = NULL, ...)
```

sparsity 49

Arguments

x An R object (should be a matrix or a data.frame).

... Further arguments to be passed to select.

select A function to be applied to the row/colum names (e.g. startsWith()). Must

return a single integer or logical vector.

Value

An integer vector or NULL.

Author(s)

N. Frerebeau

See Also

```
Other data preparation tools: append(), assign(), compact(), count(), detect(), discard(), get(), keep()
```

Examples

```
## Seek columns
seek_columns(iris, select = startsWith, prefix = "Sepal")
## Get columns
x <- get_columns(iris, select = startsWith, prefix = "Sepal")
head(x)</pre>
```

sparsity

Sparsity

Description

Computes data sparsity (proportion of zeros).

```
sparsity(x, ...)
## S4 method for signature 'matrix'
sparsity(x, count = FALSE)
## S4 method for signature 'data.frame'
sparsity(x, count = FALSE)
```

50 validate

Arguments

x An R object (should be a matrix or a data.frame).

... Currently not used.

count A logical scalar: should a count be returned instead of a proportion?

Details

If x is a data. frame, sparsity is computed on numeric variables only.

Value

A length-one numeric vector.

Author(s)

N. Frerebeau

See Also

Other data summaries: describe()

Examples

```
## Create a data matrix
X <- matrix(sample(0:9, 15, TRUE), nrow = 3, ncol = 5)
## Add NA
k <- sample(1:15, 3, FALSE)
X[k] <- NA
## Sparsity
sparsity(X)
## Quick description
describe(X)</pre>
```

validate

Validate a Condition

Description

Validate a Condition

```
validate(expr)
```

validate 51

Arguments

expr

An object to be evaluated.

Value

Returns NULL on success, otherwise returns the error as a string.

Author(s)

N. Frerebeau

See Also

```
Other validation methods: assert_constant(), assert_data, assert_length(), assert_lower(), assert_names(), assert_numeric, assert_package(), assert_square(), assert_type()
