Package 'play'

January 25, 2023

Type Package

Title Visualize Sports Data

Version 0.1.3

Description Provides functions to visualise sports data. Converts data into a
format suitable for plotting charts. Helps to ease the process of working with
messy sports data to a more user friendly format. Football data is accessed
through 'worldfootballR' '<https://github.com/JaseZiv/worldfootballR>' which
gets data from 'FBref' <https://fbref.com/en>, 'Transfermarkt' <https://www.transfermarkt.com/>,
'Understat' <https://understat.com/>, and 'fotmob' <https://www.fotmob.com/>.
