Package 'cld2'

October 4, 2024

Type Package

Title Google's Compact Language Detector 2

Version 1.2.5

Description Bindings to Google's C++ library Compact Language Detector 2
(see <https://github.com/cld2owners/cld2#readme> for more information). Probabilistically
detects over 80 languages in plain text or HTML. For mixed-language input it returns the
top three detected languages and their approximate proportion of the total classified
text bytes (e.g. 80% English and 20% French out of 1000 bytes). There is also a 'cld3'
package on CRAN which uses a neural network model instead.

License Apache License 2.0

Encoding UTF-8

cld2 *Compact Language Detector 2*

Description

The function [detect_language()](#) is vectorised and guesses the the language of each string in `text` or returns `NA` if the language could not reliably be determined. The function [detect_language_multi()](#) is not vectorised and analyses the entire character vector as a whole. The output includes the top 3 detected languages including the relative proportion and the total number of text bytes that was reliably classified.

Usage

```
detect_language(text, plain_text = TRUE, lang_code = TRUE)

detect_language_mixed(text, plain_text = TRUE)
```

Arguments

`text`	a string with text to classify or a connection to read from
`plain_text`	if FALSE then code skips HTML tags and expands HTML entities
`lang_code`	return a language code instead of name

Examples

```
# Vectorized function
text <- c("To be or not to be?", "Ce n'est pas grave.", "Nou breekt mijn klomp!")
detect_language(text)

## Not run:
# Read HTML from connection
detect_language(url('http://www.un.org/ar/universal-declaration-human-rights/'), plain_text = FALSE)

# More detailed classification output
detect_language_mixed(
  url('http://www.un.org/fr/universal-declaration-human-rights/'), plain_text = FALSE)

detect_language_mixed(
  url('http://www.un.org/zh/universal-declaration-human-rights/'), plain_text = FALSE)

## End(Not run)
```
