Package 'rdwd'

June 17, 2023

Title Select and Download Climate Data from 'DWD' (German Weather Service)

Version 1.8.0

Date 2023-06-17

Depends R(>= 2.10)

Imports berryFunctions (>= 1.21.11), pbapply

Suggests RCurl, leaflet, knitr, rmarkdown, testthat, roxygen2, devtools, remotes, bit64, data.table, OSMscale, R.utils, ncdf4, readr, dwdradar, XML, terra, stars, shiny, gsheet

Author Berry Boessenkool

Maintainer Berry Boessenkool <berry-b@gmx.de>

Description Handle climate data from the 'DWD' ('Deutscher Wetterdienst', see
<https:
//www.dwd.de/EN/climate_environment/cdc/cdc_node_en.html> for more information).
Choose observational time series from meteorological stations with 'selectDWD()'.
Find raster data from radar and interpolation according to <https:
//bookdown.org/brry/rdwd/raster-data.html>.
Download (multiple) data sets with progress bars and no re-downloads through 'dataDWD()'.
Read both tabular observational data and binary gridded datasets with 'readDWD()'.

License GPL (>= 2)

Encoding UTF-8

R **topics documented:**

addBorders   *add country and Bundesland borders to a map*

Description

add country and Bundesland borders to a map

Usage

```
addBorders(de = "grey80", eu = "black", add = TRUE, ...)
```

Arguments

de	Color for Bundeslaender lines. NA to suppress. DEFAULT: "grey80"
eu	Color for countries lines. NA to suppress. DEFAULT: "black"
add	Logical: add to existing plot? DEFAULT: TRUE
...	Further arguments passed to [terra::plot()](#)

Details

```
# Use the SpatVectors directly with:
DEU <- terra::vect(system.file("extdata/DEU.gpkg", package="rdwd"))
EUR <- terra::vect(system.file("extdata/EUR.gpkg", package="rdwd"))

# Obtained with the code:
url <- "https://gisco-services.ec.europa.eu/distribution/v2/nuts/shp/NUTS_RG_03M_2021_4326_LEVL_1.sh
tf <- tempfile(fileext=".zip")
download.file(url, tf) # 0.9 MB # in 2023-06 error 'Transferred a partial file'
unzip(tf, exdir="misc/vign") ; rm(url, tf)

DEU <- terra::vect("misc/vign/NUTS_RG_03M_2021_4326_LEVL_1.shp")
library(terra) # for bracket method
DEU <- DEU[DEU$CNTR_CODE=="DE","NUTS_NAME"]
terra::writeVector(DEU, "inst/extdata/DEU.gpkg", overwrite=TRUE)

url <- "https://gisco-services.ec.europa.eu/distribution/v2/nuts/shp/NUTS_RG_03M_2021_4326_LEVL_0.sh
tf <- tempfile(fileext=".zip")
download.file(url, tf) # 0.7 MB # in 2023-06 error 'Transferred a partial file'
unzip(tf, exdir="misc/vign") ; rm(url, tf)

EUR <- terra::vect("misc/vign/NUTS_RG_03M_2021_4326_LEVL_0.shp")
EUR <- terra::crop(EUR, c(-11,25, 40,60))
EUR <- EUR[,"NUTS_NAME"]
terra::writeVector(EUR, "inst/extdata/EUR.gpkg", overwrite=TRUE)
```

Value

invisible list with DEU and EUR

addBorders(add=FALSE)
plot(1, xlim=c(2,16), ylim=c(47,55))
addBorders(de="orange", eu=NA)
}
```

---

app   *Launch interactive weather analysis app*

Description

Launch interactive analysis of weather period comparison for different RDWD stations. The R session is blocked during usage, close the app to re-enable console usage.

Usage

```
app(...)
```

Arguments

...   Arguments passed to [shiny::runApp()]()

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, July 2018 + April 2023

See Also

[shiny::runApp()](), [rdwd]()

Examples

```
# app()
```

---
checkIndex   *check indexes*

Description

check indexes. Mainly for internal usage in [createIndex()](#). Not exported, so call it as rdwd:::checkIndex() if you want to run tests yourself. Further test suggestions are welcome!

Usage

```
checkIndex(
  findex = NULL,
  mindex = NULL,
  gindex = NULL,
  excludefp = TRUE,
  fast = FALSE,
  warn = !quiet,
 logfile = berryFunctions::packagePath(file = "misc/ExampleTests/warnings.txt"),
  quiet = rdwdquiet()
)
```

Arguments

findex	[fileIndex](#). DEFAULT: NULL
mindex	[metaIndex](#). DEFAULT: NULL
gindex	[geoIndex](#). DEFAULT: NULL
excludefp	Exclude false positives from geoIndex coordinate check results? DEFAULT: TRUE
fast	Exclude the 3-minute location per ID check? DEFAULT: FALSE
warn	Warn about issues? DEFAULT: !quiet (TRUE)
logfile	File to copy log to, appended to existing content. NULL to suppress. DEFAULT: "misc/ExampleTests/warnings.txt"
quiet	Logical: Suppress progress messages? DEFAULT: FALSE through [rdwdquiet()](#)

Value

Charstring with issues (if any) to be printed with [cat()](#).

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, May 2019

See Also

[createIndex](#)

Examples

```
data(fileIndex) ; data(metaIndex) ; data(geoIndex)
# ci <- rdwd:::checkIndex(findex=fileIndex, mindex=metaIndex, gindex=geoIndex)
# cat(ci)
```

---

checkSuggestedPackage   *check suggested package for availability*

Description

check suggested package for availability, yielding an instructive error message if not

Usage

```
checkSuggestedPackage(package, functionname)
```

Arguments

package	Charstring: package to be checked for loadability
functionname	Charstring: function name to be used in the message

Value

invisible success logical value from [requireNamespace()](#)

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Aug 2019

See Also

[requireNamespace()](#)

---

createIndex   *Create file and meta index of the DWD CDC FTP Server*

Description

This is mainly an internal function. Create data.frames out of the vector index returned by [indexFTP()](#).
For [fileIndex](#) (the first output element) createIndex tries to obtain res, var, per, file, id, start and
end from the paths. If meta=TRUE, [metaIndex](#) and [geoIndex](#) are also created. They combine all
Beschreibung files into a single data.frame.
If you create your own index as suggested in selectDWD (argument findex), you can read the
produced file as shown in the example section.

Usage

```
createIndex(
  paths,
  base = dwdbase,
  dir = "DWDdata",
  fname = "fileIndex.txt",
  meta = FALSE,
  metadir = "meta",
  mname = "metaIndex.txt",
  gname = "geoIndex.txt",
  overwrite = FALSE,
  checkwarn = TRUE,
  checklog = tempfile(),
  quiet = rdwdquiet(),
  ...
)
```

Arguments

paths	Char: vector of DWD paths returned by [indexFTP()](#) called with the same base value as this function
base	Main directory of DWD ftp server, defaulting to observed climatic records. DE-FAULT: [dwdbase](#)
dir	Char: writeable directory name where to save the main output(s). Created if not existent. DEFAULT: "DWDdata" at current [getwd()](#)
fname	Char: Name of file in dir in which to write [fileIndex](#). Use fname="" to suppress writing. DEFAULT: "fileIndex.txt"
meta	Logical: should metaIndex also be created from fileIndex? Uses [dataDWD()](#) to download files if not present. DEFAULT: FALSE
metadir	Char: Directory (subfolder of dir) where original description files are downloaded to if meta=TRUE. Passed to [dataDWD()](#). "" to write in dir. DEFAULT: "meta"
mname	Char: Name of file in dir (not metadir) in which to write [metaIndex](#). Use mname="" to suppress writing. DEFAULT: "metaIndex.txt"
gname	Filename for [geoIndex](#). DEFAULT: "geoIndex.txt"
overwrite	Logical: Overwrite existing fname / mname / gname files? If not, "_n" is added to the filenames, see [berryFunctions::newFilename()](#). DEFAULT: FALSE
checkwarn	Logical: warn about [checkIndex()](#) issues? DEFAULT: TRUE
checklog	Logfile for [checkIndex()](#). DEFAULT: [tempfile()](#)
quiet	Logical: Suppress messages about progress and filenames? DEFAULT: FALSE through [rdwdquiet()](#)
...	Further arguments passed to [dataDWD()](#) for the meta part.

Value

invisible data.frame (or if meta=TRUE, list with two data.frames) with a number of columns inferred from the paths. Each is also written to disc.

ind <- createIndex(link4, dir=tempdir())
ind

## End(Not run)
```

---

dataDWD   *Download data from the DWD CDC FTP Server*

Description

Get climate data from the German Weather Service (DWD) FTP-server. The desired dataset is downloaded into dir. If read=TRUE, it is also read and processed.
dataDWD handles vectors of URLs, displays progress bars (if the package pbapply is available) and by default does not re-download data already in dir (but see argument force to update files).
To solve "errors in download.file: cannot open URL", see [https://bookdown.org/brry/rdwd/fileindex.html]().

Usage

```
dataDWD(
  url,
  base = dwdbase,
  joinbf = FALSE,
  dir = locdir(),
  force = FALSE,
  overwrite = !isFALSE(force),
  read = TRUE,
  dbin = TRUE,
  method = getOption("download.file.method"),
  dfargs = NULL,
  sleep = 0,
  progbar = !quiet,
  browse = FALSE,
  ntrunc = 2,
  file = NULL,
  quiet = rdwdquiet(),
  ...
)
```

Arguments

url	Char (vector): complete file URL(s) (including base and filename.zip) as returned by [selectDWD()](). Can be a vector with several FTP URLs.
base	Single char: base URL that will be removed from output file names. DEFAULT: [dwdbase]()
joinbf	Logical: paste base and file url together? Needed mostly for data at [gridbase](). DEFAULT: FALSE (selectDWD returns complete URLs already)
dir	Char: Writeable directory name where to save the downloaded file. Created if not existent. DEFAULT: [locdir()]()
force	Logical (vector): always download, even if the file already exists in dir? Use NA to force re-downloading files older than 24 hours. Use a numerical value to force after that amount of hours. Use something like c(Inf, 24) or force=c(24*365, 6), for per="hr". Note: if force is not FALSE, the overwrite default is TRUE. DEFAULT: FALSE
overwrite	Logical (vector): if force=TRUE, overwrite the existing file rather than append "_1"/"_2" etc to the filename? DEFAULT: !isFALSE(force), i.e. true when force is specified.
read	Logical: read the file(s) with [readDWD()]()? If FALSE, only download is performed and the filename(s) returned. DEFAULT: TRUE
dbin	Logical: Download binary file, i.e. add mode="wb" to the [download.file()]() call? See [Website]() for details. DEFAULT: TRUE
method	[download.file]() method. Introduced in version 1.5.25 (2022-05-12) as triggered by https://github.com/brry/rdwd/issues/34. DEFAULT: getOption("download.file.method")

dfargs	Named list of additional arguments passed to download.file() Note that mode="wb" is already passed if dbin=TRUE
sleep	Number. If not 0, a random number of seconds between 0 and sleep is passed to Sys.sleep() after each download to avoid getting kicked off the FTP-Server, see note in indexFTP(). DEFAULT: 0
progbar	Logical: present a progress bar with estimated remaining time? If missing and length(file)==1, progbar is internally set to FALSE. Only works if the R package pbapply is available. DEFAULT: TRUE (!quiet)
browse	Logical: open repository via browseURL() and return URL folder path? If TRUE, no data is downloaded. If file has several values, only unique folders will be opened. DEFAULT: FALSE
ntrunc	Single integer: number of filenames printed in messages before they get truncated with message "(and xx more)". DEFAULT: 2
file	Deprecated since rdwd version 1.3.34, 2020-07-28.
quiet	Logical: suppress message about directory / filenames? DEFAULT: FALSE through rdwdquiet()
...	Further arguments passed to readDWD(), like fread, varnames, hr, etc.

Value

Presuming downloading and processing were successful: if read=TRUE, the desired dataset (as returned by readDWD()), otherwise the filename as saved on disc (may have "_n" appended in name, see newFilename()).
If length(file)>1, the output is a list of outputs / vector of filenames.
The output is always invisible.

Helpful for plotting: berryFunctions::monthAxis(), see also berryFunctions::climateGraph()

Examples

```
## Not run:  ## requires internet connection
# find FTP files for a given station name and file path:
link <- selectDWD("Fuerstenzell", res="hourly", var="wind", per="recent")
# download file:
fname <- dataDWD(link, dir=locdir(), read=FALSE) ; fname
# dir="DWDdata" is the default directory to store files
# unless force=TRUE, already obtained files will not be downloaded again

# read and plot file:
wind <- readDWD(fname, varnames=TRUE) ; head(wind)
```

```
metafiles <- readMeta(fname)           ; str(metafiles, max.level=1)
column_names <- readVars(fname)        ; head(column_names)

plot(wind$MESS_DATUM, wind$F, main="DWD hourly wind Fuerstenzell", col="blue",
     xaxt="n", las=1, type="l", xlab="Date", ylab="Hourly Wind speed  [m/s]")
berryFunctions::monthAxis(1)

# current and historical files, keep historical in the overlap time period:
link <- selectDWD("Potsdam", res="daily", var="kl", per="hr"); link
potsdam <- dataDWD(link, dir=locdir(), hr=4)
plot(TMK~MESS_DATUM, data=tail(potsdam,1500), type="l")

# With many files (>>50), use sleep to avoid getting kicked off the FTP server
#links <- selectDWD(res="daily", var="solar")
#sol <- dataDWD(links, sleep=20) # random waiting time after download (0 to 20 secs)

# Real life examples can be found in the use cases section of the vignette:
# browseURL("https://bookdown.org/brry/rdwd")

## End(Not run)
```

---

dirDWD   *directory management for rdwd*

Description

Manage directories with useful messages in the rdwd package.

Usage

```
dirDWD(dir = "DWDdata", quiet = rdwdquiet())
```

Arguments

dir   Char for dirDWD: writeable directory name. Created if not existent. DEFAULT:
               "DWDdata" at current getwd()

quiet   Logical: Suppress messages about creating dir? DEFAULT: FALSE through
               rdwdquiet()

Value

dirDWD invisibly returns the prior working directory as per setwd().

---

dwdbase   *DWD FTP Server base URL*

Description

base URLs to the DWD FTP Server

dwdbase: observed climatic records at ftp:// variant of
https://opendata.dwd.de/climate_environment/CDC/observations_germany/climate/
See [overview of available datasets](#) and [usage suggestions](#).

gridbase: spatially interpolated gridded data at ftp:// variant of
https://opendata.dwd.de/climate_environment/CDC/grids_germany/
See [usage suggestions](#)

Usage

```
dwdbase
```

Format

An object of class `character` of length 1.

---

dwdparams   *DWD parameter explanations*

Description

Short German parameter explanations for the DWD abbreviations on the CDC FTP server.
These are manually created by me and might need to be expanded if the DWD adds more abbreviations.
[readVars()](#) maps them to the variable abbreviations in the "Metadaten_Parameter.*txt" file in any given zip folder and will warn about missing entries.

Usage

```
dwdparams
```

Format

An object of class data.frame with 176 rows and 2 columns.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Jun 2018

[readVars()](), [readDWD()]()

Examples

```
head(dwdparams)
```

| fileType | *determine DWD file type* |

Description

determine which subfunction to call in [readDWD()]() from the file extension (ext).

The first block is for **observational data** ([overview]()), the second for **gridded data** ([overview]()).
Click on the type for the subfunction documentation, e.g. [data]() for [readDWD.data()]().

type	ext	notes
[data]()	.zip	For regular data at [dwdbase]().
[meta]()	.txt	For Beschreibung.txt files. For zip files containing station meta information, see [readMeta()]().
[multia]()	[SO]	[SO]: file ends with "Standort.txt" or contains multi_annual. Overrides meta.
[stand]()	[SF]	[SF]: file contains "standard_format". For subdaily/standard_format files.
[data]()	.txt.gz	For data at /CDC/derived_germany/.
[pdf]()	.pdf	only opens file in default viewer.
——-		
[radar]()	.gz	For when the file contains a single binary file.
[binary]()	.tar.gz	The common radolan format, as far as I can tell.
[raster]()	.asc.gz	E.g. for seasonal data at [gridbase]().

[nc](#)	.nc.gz	For netcdf files.
[asc](#)	.tar	For a `file` containing asc files.
[rklim](#)	YW*.tar	For a `file` containing bin files.
[grib2](#)	.grib2.bz2	For an nwp forecast `file`.

Usage

```
fileType(file)
```

Arguments

file   Filename(s) with extension.

Value

Character (vector)

---

findID   *find DWD weather station ID from name*

Description

Identify DWD weather station ID from station name

Usage

```
findID(
  name = "",
  exactmatch = TRUE,
  mindex = metaIndex,
  failempty = FALSE,
  quiet = rdwdquiet()
)
```

Arguments

name	Char: station name(s) that will be matched in mindex to obtain **id**. DEFAULT: ""
exactmatch	Logical: Should name match an entry in mindex exactly (be ==)? If FALSE, name may be a part of mindex$Stationsname, as checked with grepl(). This is useful e.g. to get all stations starting with a name (e.g. 42 IDs for Berlin). DEFAULT: TRUE
mindex	Single object: Index used to select id if name is given. DEFAULT: metaIndex
failempty	Logical: fail if no matching names are found (instead of returning NA with a warning)? With the latter, selectDWD() returns all files at a res/var/per folder. This may be especially unwanted with per="hr". DEFAULT: FALSE
quiet	Logical: suppress length warnings? DEFAULT: FALSE through rdwdquiet()

Value

Character string (vector) with ID(s)

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Oct-Nov 2016

See Also

used in selectDWD(), metaInfo()

Examples

```
# Give weather station name (must be existing in metaIndex):
findID("Potsdam")
findID("potsDam") # capitalization is ignored
# all names containing "Hamburg":
findID("Hamburg", exactmatch=FALSE)
findID("Potsdam", exactmatch=FALSE)

# vectorized:
findID(c("Potsdam","Berlin-Buch"))

# German Umlauts are changed to ue, ae, oe, ss
findID("Muenchen", FALSE)
berryFunctions::convertUmlaut("M?nchen") # use this to convert umlauts in lists
```

---

index   *Indexes of files and metadata on the DWD CDC FTP server*

Description

Created with indexFTP() and createIndex() used in updateIndexes().

In functions, you can access them with rdwd:::fileIndex etc.

fileIndex: A data.frame with the filenames (and derived information) at the default base value dwdbase.

metaIndex: A data.frame with the contents of all the station description files (..._Beschreibung_Stationen.txt) under dwdbase.

geoIndex: metaIndex distilled to geographic locations.

gridIndex: Vector of file paths at gridbase.

formatIndex: (modified) table from https://opendata.dwd.de/climate_environment/CDC/observations_germany/climate/subdaily/standard_format/formate_kl.html

Format

fileIndex: data.frame with character strings. ca 260k rows x 8 columns:

res, var, per (see selectDWD()), station id, time series start and end, and ismeta information, all according to path.

metaIndex: data.frame with ca 97k rows for 12 columns:

Stations_id, von_datum, bis_datum, Stationshoehe, geoBreite, geoLaenge, Stationsname, Bundesland, res,

geoIndex: data.frame with ca 6k rows for 11 columns:

id, name, state, lat, lon, ele, nfiles, nonpublic, recentfile, display, col

gridIndex: Vector with ca 50k file paths at gridbase

formatIndex: data.frame with 140 rows for 12 columns:

```
Ke_Ind, Kennung, Label, Beschreibung, Einheit, Code-Tabellen, Zusatzinfo, Typ, Pos, Erlaubt, Fehlk, div
```

---

indexFTP   *Create a recursive index of an FTP Server*

Description

Create a list of all the files (in all subfolders) of an FTP server. Defaults to the German Weather Service (DWD, Deutscher WetterDienst) OpenData server at https://opendata.dwd.de/climate_environment/CDC/observations_germany/climate/.
The R package RCurl must be available to do this.

It's not suggested to run this for all folders, as it can take quite some time and you may get kicked off the FTP-Server. This package contains an index of the climatic observations at weather stations ([fileIndex](#)) and gridded datasets ([gridIndex](#)). If they are out of date, please let me know!

Getting banned from the FTP Server

Normally, this shouldn't happen anymore: since Version 0.10.10 (2018-11-26), a single RCurl handle is used for all FTP requests and since version 1.0.17 (2019-05-14), the file tree provided by the

DWD is used to obtain all folders first, eliminating the recursive calls.

There's a provision if the FTP server detects bot requests and denies access. If [RCurl::getURL()](#) fails, there will still be an output which you can pass in a second run via `folder` to extract the remaining dirs. You might need to wait a bit and set `sleep` to a higher value in that case. Here's an example:

```
gridindex <- indexFTP("", gridbase)
gridindex <- indexFTP(gridindex, gridbase, sleep=15)
```

Of course, with a higher sleep value, the execution will take longer!

Usage

```
indexFTP(
  folder = "currentfindex",
  base = dwdbase,
  is.file.if.has.dot = TRUE,
  exclude.latest.bin = TRUE,
  fast = TRUE,
  sleep = 0,
  dir = "DWDdata",
  filename = folder[1],
  overwrite = FALSE,
  quiet = rdwdquiet(),
  progbar = !quiet,
  verbose = FALSE
)
```

Arguments

folder	Folder(s) to be indexed recursively, e.g. "/hourly/wind/". Leading slashes will be removed. Use `folder=""` to search at the location of `base` itself. If `folder` is "currentfindex" (the default) and `base` is the default, `folder` is changed to all observational folders listed in the current tree file at https://opendata.dwd.de/weather/tree.html. With "currentgindex" and `gridbase`, the grid folders in the tree are used. DEFAULT: "currentfindex"
base	Main directory of FTP server. Trailing slashes will be removed. DEFAULT: [dwdbase](#)
is.file.if.has.dot	
	Logical: if some of the input paths contain a dot, treat those as files, i.e. do not try to read those as if they were a folder. Only set this to FALSE if you know what you're doing. DEFAULT: TRUE
exclude.latest.bin	
	Exclude latest file at opendata.dwd.de/weather/radar/radolan? RCurl::getURL indicates this is a pointer to the last regularly named file. DEFAULT: TRUE
fast	Read tree file with [data.table::fread()](#) (1 sec) instead of [readLines()](#) (10 secs)? DEFAULT: TRUE

sleep	If not 0, a random number of seconds between 0 and `sleep` is passed to `Sys.sleep()` after each read folder to avoid getting kicked off the FTP-Server, see note above. DEFAULT: 0
dir	Writeable directory name where to save the downloaded file. Created if not existent. DEFAULT: "DWDdata" at current `getwd()`
filename	Character: Part of output filename. "INDEX_of_DWD_" is prepended, "/" replaced with "_", ".txt" appended. DEFAULT: folder[1]
overwrite	Logical: Overwrite existing file? If not, "_n" is added to the filename, see `berryFunctions::newFilename()`. DEFAULT: FALSE
quiet	Suppress progbars and message about directory/files? DEFAULT: FALSE through `rdwdquiet()`
progbar	Logical: present a progress bar in each level? DEFAULT: TRUE
verbose	Logical: write a lot of messages from `RCurl::getURL()`? DEFAULT: FALSE (usually, you dont need all the curl information)

Value

a vector with file paths

## End(Not run)
```

---

lldist	*distance between lat-long coordinates*

Description

Great-circle distance between points at lat-long coordinates. Mostly a copy of OSMscale::earthDist Version 0.5.3 (2017-04-19). https://github.com/brry/OSMscale/blob/master/R/earthDist.R#L57-L102. Copied manually to avoid dependency hell. Does not check coordinates. Not exported.

Usage

```
lldist(lat, long, data, r = 6371, i = 1L)

maxlldist(lat, long, data, r = 6371, fun = max, each = TRUE, ...)
```

Arguments

lat, long	Latitude (North/South) and longitude (East/West) coordinates in decimal degrees
data	Optional: data.frame with the columns lat and long
r	radius of the earth. Could be given in miles. DEFAULT: 6371 (km)
i	Integer: Index element against which all coordinate pairs are computed. DEFAULT: 1
fun	Function to be applied. DEFAULT: max()
each	Logical: give max dist to all other points for each point separately? If FALSE, will return the maximum of the complete distance matrix, as if max(maxlldist(y,x)). For examples, see OSMscale::maxEarthDist DEFAULT: TRUE
...	Further arguments passed to fun, like na.rm=TRUE

Value

Vector with distance(s) in km (or units of r, if r is changed)

---

locdir	*local data directory*

Description

This can be used to set a directory for DWD data across projects, thus avoiding multiple downloads of the same file.
Set the default for all subsequent calls with options(rdwdlocdir="YOUR/PATH").
Currently, the dataDWD() dir defaults to a project specific folder at getwd. In the future, this may change to locdir().
locdir() is used especially for the website, local tests and examples.

Usage

```
locdir(dir = getOption("rdwdlocdir"), file = NULL, quiet = rdwdquiet())
```

Arguments

dir	Path to data directory. If dir does not exist, [tempdir()](#) is used instead (with a warning, unless quiet=TRUE). If dir is NULL, locdir tries "C:/DWDdata", then "~/DWDdata". dir can also be set with options(rdwdlocdir="YOUR/PATH") thanks to the DEFAULT: [getOption](#)("rdwdlocdir")
file	Optional: path(s) at dir. DEFAULT: NULL
quiet	Logical: suppress tempdir warning? DEFAULT: FALSE through [rdwdquiet()](#)

Value

charstring (directory)

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Apr 2019, Jun 2021

See Also

[runLocalTests()](#)

Examples

```

locdir()
stopifnot(locdir() == path.expand("~"))
options(oldopt) ; rm(oldopt)
```

---

metaInfo	*Information for a station ID on the DWD CDC FTP server*

Description

Information for a station ID on the DWD CDC FTP server

Usage

```
metaInfo(id, mindex = metaIndex, hasfileonly = TRUE)
```

Arguments

id	Station ID (integer number or convertible to one)
mindex	Index dataframe with metadata. DEFAULT: [metaIndex](#)
hasfileonly	Logical: Only show entries that have files? DEFAULT: TRUE

Value

invisible data.frame. Also [`print`](prints) the output nicely formatted.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Nov 2016

See Also

metaInfo(2849)
```

---

nearbyStations   *Find DWD stations close to given coordinates*

Description

Select DWD stations within a given radius around a set of coordinates

Usage

```
nearbyStations(
  lat,
  lon,
  radius,
  res = NA,
  var = NA,
  per = NA,
  mindate = NA,
  hasfileonly = TRUE,
  statname = "nearbyStations target location",
  quiet = rdwdquiet(),
  ...
)
```

Arguments

lat	Coordinates y component [degrees N/S, range 47:55]
lon	Coordinates x component [degrees E/W, range 6:15]
radius	Maximum distance [km] within which stations will be selected
res, var, per	Restrictions for dataset type as documented in [selectDWD()](selectDWD). Each can be a vector of entries. DEFAULTS: NA (ignored)

mindate	Minimum dataset ending date (as per metadata). DEFAULT: NA
hasfileonly	Logical: only return entries for which there is an open-access file available? DEFAULT: TRUE
statname	Character: name for target location. DEFAULT: "nearbyStations target location"
quiet	Logical: suppress progress messages? DEFAULT: FALSE through rdwdquiet()
...	Further arguments passed to selectDWD()

Value

metaIndex subset with additional columns "dist" and "url"

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Mar 2017

See Also

selectDWD(), metaIndex, website use case with nearbyStations

Examples

```
m <- nearbyStations(49.211784, 9.812475, radius=30,
    res=c("daily","hourly"), var= c("precipitation","more_precip","kl") ,
    mindate=as.Date("2016-05-30"), statname="Braunsbach catchment center")
# View(m)

# for a continued example of this, see the vignette in chapter
# use case: plot all rainfall values around a given point
# browseURL("https://bookdown.org/brry/rdwd")
```

---

newColumnNames	*Enhance readDWD column names*

Description

Add short German parameter descriptions to the DWD abbreviations. This uses dwdparams() to create column names like "TT_TU.Lufttemperatur" and "RSK.Niederschlagshoehe." Column names not in the abbreviation list will be left untouched.

Usage

```
newColumnNames(dataframe, variables = dwdparams, separator = ".")
```

Arguments

dataframe	Dataframe as returned by readDWD.data()
variables	Dataframe as returned by readVars() for a single file. Rownames must be variable abbreviations. There must be a "Kurz" column. DEFAULT: dwdparams
separator	Separator between abbreviation and long name. DEFAULT: "."

Value

The dataframe with new column names

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Apr 2019

See Also

dwdparams, readVars(), readDWD() argument varnames, newColumnNames()

Examples

```
# mainly for internal usage
```

---

plotDWD   *Quickly plot time series*

Description

plot rdwd time series from data.frames

Usage

```
plotDWD(
  x,
  cn,
  monthaxis = TRUE,
  line0 = FALSE,
  xlab = "",
  ylab = cn,
  main = "",
  type = "l",
  lwd = 3,
  col = "blue",
  las = 1,
  mar = c(2.6, 3.1, 2.5, 0.5),
  mgp = c(1.9, 0.7, 0),
  keeppar = TRUE,
  ...
)
```

Arguments

x	Data.frame, e.g. from readDWD.data
cn	Column name (charstring)
monthaxis	Draw nice axis? DEFAULT: TRUE
line0	Draw horizontal line at 0? DEFAULT: FALSE
xlab	X axis label. DEFAULT: ""
ylab	Y axis label. DEFAULT: cn
main	Plot title. DEFAULT: ""
type	graphics::plot type. DEFAULT: "l"
lwd	Line width. DEFAULT: 3
col	Line color. DEFAULT: "blue"
las	Label axis style. DEFAULT: 1 (all upright)
mar	Plot margins. DEFAULT: c(2.6, 3.1, 2.5, 0.5)
mgp	Margin placement. DEFAULT: c(1.9, 0.7, 0)
keeppar	Keep las, mar and mgp as set with par, so later points are added in the right location? DEFAULT: TRUE
...	Further arguments passed to graphics::plot

Value

Nothing

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Sep 2021

See Also

readDWD()

Examples

```
link <- selectDWD("Potsdam", res="daily", var="kl", per="r")
clim <- dataDWD(link, dir=locdir(), varnames=TRUE)
plotDWD(clim, "TMK.Lufttemperatur", line0=TRUE, main="Potsdam")
```

---

plotRadar *plot radar products on a pretty map*

Description

Convenience function to plot radar products on a pretty map. Creates a separate plot for each layer, a selection is possible.

Usage

```
plotRadar(
  x,
  layer = NULL,
  main = names(x),
  land = "gray80",
  sea = "cadetblue1",
  de = "grey80",
  eu = "black",
  col = berryFunctions::seqPal(),
  xlim = NULL,
  ylim = NULL,
  zlim = NULL,
  axes = TRUE,
  las = 1,
  mar = c(2.5, 3.5, 2.5, 5),
  keeppar = TRUE,
  project = TRUE,
  proj = "radolan",
  extent = "radolan",
  adjust05 = FALSE,
  targetproj = "ll",
  quiet = rdwdquiet(),
  ...
)
```

Arguments

x	terra raster oject, e.g. 'dat' element of object returned by readDWD().
layer	Optional: selected layer(s) to be plotted. DEFAULT: NULL
main	Graph title(s). Use "" to suppress. DEFAULT: names(x)
land	Color of land areas in the map. DEFAULT: "gray80"
sea	Color of sea areas in the map. DEFAULT: "cadetblue1"
de	Color of Deutschland Bundesland borders. DEFAULT: "grey80"
eu	Color of Europe country borders . DEFAULT: "black"
col	Color palette for the data itself. DEFAULT: berryFunctions::seqPal()

xlim	xlim. DEFAULT: NULL, i.e. taken from x extent (after reprojection if `project=TRUE`)
ylim	ylim. DEFAULT: NULL, i.e. taken from y extent (after reprojection if `project=TRUE`)
zlim	zlim. 3 Options: two-number vector, `zlim="ind"` for individual zlim per layer, or NULL for `range` of selected layer(s). DEFAULT: NULL
axes	Draw axes? DEFAULT: TRUE
las	LabelAxisStyle for axes. DEFAULT: 1 (all upright)
mar	Vector with plot margins. DEFAULT: c(2.5, 3.5, 2.5, 5)
keeppar	Logical: keep the margins set with par, so later points etc are added in the right location? DEFAULT: TRUE, opposite to `sf::plot` with reset=TRUE, see https://github.com/cran/sf/blob/master/R/plot.R
project	Project the data before plotting? Not needed if `projectRasterDWD()` has already been called. DEFAULT: TRUE
proj	current projection, see `projectRasterDWD()`, used only if `project=TRUE`. DEFAULT: "radolan"
extent	current extent, see `projectRasterDWD()`, used only if `project=TRUE`. DEFAULT: "radolan"
adjust05	Logical: Adjust extent by 0.5m to match edges? DEFAULT: FALSE
targetproj	target projection, see `projectRasterDWD()`, used only if `project=TRUE`. DEFAULT: "ll"
quiet	suppress progress messages? DEFAULT: FALSE through `rdwdquiet()`
...	Further arguments passed to `terra::plot()`

Value

terra object, (re)projected (if project=TRUE). If `length(layer)==1`, only that selected layer is returned.

# several layers
url <- "daily/Project_TRY/pressure/PRED_199606_daymean.nc.gz"  #  5 MB
nc <- dataDWD(url, base=gridbase, joinbf=TRUE)

ncp3 <- plotRadar(nc, main=paste(terra::longnames(nc), terra::time(nc)), layer=1:3,
                  col=terrain.colors(100), proj="nc", extent="nc")
plotRadar(ncp3, layer=3:4, project=FALSE) # still has all layers
plotRadar(ncp3, layer=4:5, project=FALSE, zlim="ind") # individual zlims per layer
plotRadar(ncp3, layer=1, project=FALSE, zlim=c(1016,1020))

ncp1 <- plotRadar(nc, layer=1, proj="nc", extent="nc") # much faster projection
# no longer has layers 2-4:
berryFunctions::is.error(plotRadar(ncp1, layer=1:4, project=FALSE), TRUE, TRUE)

## End(Not run)
```

---

projectRasterDWD   *project DWD raster data*

Description

Set projection and extent for DWD raster data. Optionally (and per default) also reprojects to latlon data.

WARNING: reprojection to latlon changes values slightly. For the tested RX product, this change is significant, see: https://github.com/brry/rdwd/blob/master/misc/ExampleTests/Radartests.pdf
In terra::plot, **use range=zlim with the original range** if needed.

Usage

```
projectRasterDWD(
  r,
  proj = "radolan",
  extent = "radolan",
  adjust05 = FALSE,
  targetproj = "ll",
  threads = TRUE,
  quiet = rdwdquiet()
)
```

Arguments

r   terra raster object

proj	Current projection to be given to r. Can be - a `terra::crs()` input, - NULL to not set proj+extent (but still consider `targetproj`), - or a special charstring for internal defaults, namely: "radolan" (readDWD.binary + .asc + .radar), "seasonal" (.raster) or "nc" (.nc). DEFAULT: "radolan"
extent	Current `terra::ext()` extent to be given to r. Ignored if proj=NULL. Can be NULL to be ignored, an extent object, a vector with 4 numbers, or "radolan" / "rw" / "seasonal" / "nc" with internal defaults. DEFAULT: "radolan"
adjust05	Logical: Adjust extent by 0.5m to match edges? DEFAULT: FALSE
targetproj	r is reprojected to this `terra::crs()`. Use NULL to not reproject (i.e. only set proj and extent). DEFAULT: "ll" with internal default for lat-lon.
threads	Use multiple CPU threads for `terra::project()`? DEFAULT: TRUE (opposite from terra::project)
quiet	Logical: suppress progress messages? DEFAULT: FALSE through `rdwdquiet()`

Details

The internal defaults are extracted from the Kompositformatbeschreibung at `https://www.dwd.de/DE/leistungen/radolan/radolan.html`, as provided 2019-04 by Antonia Hengst.
The nc extent was obtained by projecting Germanys bbox to EPSG 3034 (specified in the DWD documentation). Using that as a starting point, I then refined the extent to a visual match, see developmentNotes.R

Value

terra raster object with projection and extent, invisible

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, May 2019, June 2023

rdwd *Handle Climate Data from DWD (German Weather Service)*

Description

- find, select, download + read data from the German weather service DWD

- vectorized, progress bars, no re-downloads

- index of files + meta data

- observational time series from 6k meteorological recording stations (2.5k active)
  -> rain, temperature, wind, sunshine, pressure, cloudiness, humidity, snow, ...

- gridded raster data from radar + interpolation

- european data stock slowly growing
  For an introduction to the package, see <https://bookdown.org/brry/rdwd>.

Searchability Terms

---

rdwdquiet *global quiet option for rdwd*

Description

global quiet option. The default `rdwdquiet()` is FALSE.
Just write the following in your code and all subsequent calls will be quiet:
`options(rdwdquiet=TRUE)`

Usage

```
rdwdquiet()
```

---

readDWD   *Process data from the DWD CDC FTP Server*

Description

Read climate data that was downloaded with [dataDWD()](). The data is unzipped and subsequently, the file(s) are read, processed and returned as a data.frame / terra raster object.

For observational data, new users are advised to set varnames=TRUE to obtain more informative column names.

readDWD will call internal (but documented) subfunctions depending on the argument type, see the overview in [fileType()]().

Not all arguments to readDWD are used for all subfunctions, e.g. fread is used only by [readDWD.data](), while dividebyten is used in [readDWD.raster]() and [readDWD.asc]().

file can be a vector with several filenames. Most other arguments can also be a vector and will be recycled to the length of file.

Usage

```
readDWD(
  file,
  type = fileType(file),
  varnames = FALSE,
  fread = NA,
  format = NA,
  tz = "GMT",
  hr = 0,
  dividebyten = TRUE,
  var = "",
  progbar = !quiet,
  quiet = rdwdquiet(),
  quietread = quiet,
  ...
)
```

Arguments

file	Char (vector): name(s) of the file(s) downloaded with [dataDWD()](), e.g. "~/DWD-data/tageswerte_KL_02575_akt.zip" or "~/DWDdata/RR_Stundenwerte_Beschreibung_Stationen.txt"
type	Character (vector) determining which subfunction to call. DEFAULT: [fileType](file).
varnames	Logical (vector): Expand column names? Only used in [readDWD.data](). DEFAULT: FALSE (for backward compatibility)
fread	Logical (vector): read fast? Used in [readDWD.data](). DEFAULT: NA

format, tz	Format and time zone of time stamps, see readDWD.data()
hr	Integer code to merge historical and recent file. Used here, but documented in detail in readDWD.data(). DEFAULT: 0 (ignore argument)
dividebyten	Logical (vector): Divide the values in raster files by ten? That way, [1/10 mm] gets transformed to [mm] units. Used in readDWD.radar(), readDWD.raster() and readDWD.asc(). DEFAULT: TRUE
var	var for readDWD.nc(). DEFAULT: ""
progbar	Logical: present a progress bar with estimated remaining time? If missing and length(file)==1, progbar is internally set to FALSE, unless binary files are to be read. DEFAULT: !quiet
quiet	Logical: suppress messages? DEFAULT: FALSE through rdwdquiet()
quietread	Logical: suppress message like "Reading 1 file with readDWD.data() and fread=TRUE ...". DEFAULT: quiet
...	Further arguments passed to the internal readDWD.* subfunctions (see fileType) and from those to the underlying actual reading functions

Value

For observational data, an invisible data.frame of the desired dataset, or a named list of data.frames if length(file) > 1.
For gridded data, terra raster objects.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Jul-Oct 2016, Winter 2018/19

```

---

readDWD.asc   *read dwd gridded radolan asc data*

Description

read grid-interpolated radolan asc data. Intended to be called via readDWD().
All layers (following selection if given) in all .tar.gz files are combined into a terra raster with terra::rast().
To project the data, use projectRasterDWD()

Usage

```
readDWD.asc(
  file,
  exdir = NULL,
  dividebyten = TRUE,
  selection = NULL,
  quiet = rdwdquiet(),
  progbar = !quiet,
  ...
)
```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/grids_germany/hourly/radolan/historical/asc/ 2018_RW-201809.tar. Must have been downloaded with mode="wb"!
exdir	Directory to unzip into. Unpacked files existing therein will not be untarred again, saving up to 15 secs per file. DEFAULT: NULL (subfolder of tempdir())
dividebyten	Divide numerical values by 10? See readDWD. If dividebyten=FALSE and exdir left at NULL (tempdir), save the result on disc with terra::writeRaster(). Accessing out-of-memory raster objects won't work if exdir is removed! -> Error in .local(.Object, ...) DEFAULT: TRUE
selection	Optionally read only a subset of the ~24*31=744 files. Called as f[selection]. DEFAULT: NULL (ignored)
quiet	Suppress progress messages? DEFAULT: FALSE through rdwdquiet()
progbar	Show progress bars? readDWD() will keep progbar=TRUE for asc files, even if length(file)==1. DEFAULT: !quiet, i.e. TRUE
...	Further arguments passed to terra::rast()

Value

data.frame

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, April 2019

See Also

readDWD()

Examples

```
## Not run:  # Excluded from CRAN checks, but run in localtests
# File selection and download:
radbase <- paste0(gridbase,"/hourly/radolan/historical/asc/")
radfile <- "2018/RW-201809.tar" # 25 MB to download
file <- dataDWD(radfile, base=radbase, joinbf=TRUE, read=FALSE)
#asc <- readDWD(file) # 4 GB in mem. ~ 20 secs unzip, 10 secs read, 2 min divide
```

```
asc <- readDWD(file, selection=1:5, dividebyten=TRUE)
plotRadar(asc[[1]], main=names(asc)[1])

viddir <- paste0(tempdir(),"/RadolanVideo")
dir.create(viddir)
png(paste0(viddir,"/Radolan_%03d.png"), width=7, height=5, units="in", res=300)
plotRadar(asc, layer=1:3, main=names(asc)) # 3 secs per layer
dev.off()
berryFunctions::openFile(paste0(viddir,"/Radolan_001.png"))

# Time series of a given point in space:
plot(unlist(asc[800,800,]), type="l", xlab="Time [hours]")

# if dividebyten=FALSE, terra stores things out of memory in the exdir.
# by default, this is in tempdir, hence you would need to save asc manually:
# terra::writeRaster(asc, tempfile(fileext="/RW2018-09.gpkg"), overwrite=TRUE)

## End(Not run)
```

---

readDWD.binary   *read dwd gridded radolan binary data*

Description

read gridded radolan binary data. Intended to be called via [readDWD()](#).

Usage

```
readDWD.binary(
  file,
  exdir = sub(".tar.gz$", "", file),
  toraster = TRUE,
  quiet = rdwdquiet(),
  progbar = !quiet,
  selection = NULL,
  ...
)
```

Arguments

file   Name of file on harddrive, like e.g. DWDdata/daily_radolan_historical_bin_2017_SF201712.tar.gz

exdir   Directory to unzip into. If existing, only the needed files will be unpacked with
              [untar()](#). Note that exdir size will be around 1.1 GB. exdir can contain other
              files, these will be ignored for the actual reading with [dwdradar::readRadarFile()](#).
              DEFAULT exdir: sub(".tar.gz$", "", file)

toraster   Logical: convert output (list of matrixes + meta informations) to a list with dat
              ([terra::rast](#)) + meta (list from the first subfile, but with vector of dates)?
              DEFAULT: TRUE

quiet	Suppress progress messages? DEFAULT: FALSE through rdwdquiet()
progbar	Show progress bars? readDWD() will keep progbar=TRUE for binary files, even if length(file)==1. DEFAULT: !quiet, i.e. TRUE
selection	Optionally read only a subset of the ~24*31=744 files. Called as f[selection]. DEFAULT: NULL (ignored)
...	Further arguments passed to dwdradar::readRadarFile(), i.e. na and clutter

Value

list depending on argument toraster, see there for details

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Dec 2018. Significant input for the underlying dwdradar::readRadarFile() came from Henning Rust & Christoph Ritschel at FU Berlin.

```

---

readDWD.data   *read regular dwd data*

Description

Read regular dwd data. Intended to be called via [readDWD()](#).

Usage

```
readDWD.data(
  file,
  fread = FALSE,
  varnames = FALSE,
  format = NA,
  tz = "GMT",
  hr = 0,
  quiet = rdwdquiet(),
  ...
)
```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/daily_kl_recent_tageswerte_KL_03987_akt.zip
fread	Logical: read faster with [data.table::fread](#)? When reading many large historical files, speedup is significant. When called from [readDWD()](#), fread=NA can also be used, which means TRUE if R package data.table and system command unzip are available. Hint for Windows users: unzip comes with Rtools. See <https://bookdown.org/brry/rdwd/fread.html> DEFAULT: FALSE
varnames	Logical (vector): add a short description to the DWD variable abbreviations in the column names? E.g. change FX,TNK to FX.Windspitze,TNK.Lufttemperatur_Min, see [newColumnNames()](#). DEFAULT: FALSE (for backwards compatibility)
format	Char (vector): Format passed to [as.POSIXct()](#) (see [strptime()](#)) to convert the date/time column to POSIX time format. If NULL, no conversion is performed (date stays a factor). If NA, readDWD tries to find a suitable format based on the number of characters. DEFAULT: NA
tz	Char (vector): time zone for [as.POSIXct()](#). "" is the current time zone, and "GMT" is UTC (Universal Time, Coordinated). DEFAULT: "GMT"

hr	Integer code to automatically merge historical and recent datasets. If set, readDWD returns a data.frame instead of a list. If multiple historical files are present, the longest date range (per file name) is used. This is not actually used in readDWD.data, but in [readDWD()]().
	0 (default): ignore this argument
	1: sort by hr (if given) + merge
	2: also remove duplicated dates from recent
	3: also remove columns QN3,QN4,eor
	4: also remove column STATIONS_ID
	DEFAULT: 0
quiet	Suppress empty file warnings? DEFAULT: FALSE through [rdwdquiet()]()
...	Further arguments passed to [read.table()]() or [data.table::fread()]()

Value

data.frame

Author(s)

Berry Boessenkool, <berry-b@gmx.de>

See Also

[readDWD()](), Examples in [dataDWD()]()

---

readDWD.deriv   *read derived dwd data*

Description

Read dwd data from /CDC/derived_germany/. Intended to be called via [readDWD()]().

Usage

```
readDWD.deriv(file, gargs = NULL, todate = TRUE, quiet = rdwdquiet(), ...)
```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/soil_daily_historical_derived_germany_soil_daily_historic
gargs	If fread=FALSE: Named list of arguments passed to [R.utils::gunzip()](), see [readDWD.raster()](). DEFAULT: NULL
todate	Logical: Convert char column 'Datum' or 'Monat' with [as.Date()]()? The format is currently hard-coded. Monthly data gets mapped to yyyy-mm-15 DEFAULT: TRUE
quiet	Ignored. DEFAULT: FALSE through [rdwdquiet()]()
...	Further arguments passed to [read.table()]() or [data.table::fread()]()

Value

data.frame

Author(s)

Berry Boessenkool, <berry-b@gmx.de>

See Also

[readDWD()](), https://bookdown.org/brry/rdwd/use-case-derived-data.html

---

readDWD.grib2   *read nwp forecast data*

Description

read gridded numerical weather prediction data. Intended to be called via [readDWD()]().

Usage

```
readDWD.grib2(file, pack = "terra", bargs = NULL, quiet = rdwdquiet(), ...)
```

Arguments

file	Name of file on harddrive, like e.g. cosmo-d2_germany_regular-lat-lon_single-level_2021010100_005_T_2M.grib2.bz2
pack	Char: package used for reading. One of "terra" or "stars". "rgdal" (for the deprecated cosmo-d2 data) is no longer available, see issue. DEFAULT: "terra"
bargs	Named list of arguments passed to [R.utils::bunzip2()](), see gargs in [readDWD.raster()](). DEFAULT: NULL
quiet	Silence readGDAL completely, including warnings on discarded ellps / datum. DEFAULT: FALSE through [rdwdquiet()]()
...	Further arguments passed to [terra::rast()]() or [stars::read_stars()]().

Value

terra or stars object, depending on `pack`

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Jan 2021.

View(data.frame(grep("regular",grib_files, value=TRUE)))
}

## End(Not run)
```

---

readDWD.meta   *read dwd metadata (Beschreibung*.txt files)*

Description

read dwd metadata (Beschreibung*.txt files). Intended to be called via readDWD().
Column widths for read.fwf() are computed internally.
if(any(meta)), readDWD() tries to set the locale to German (to handle Umlaute correctly). It is hence
not recommended to call rdwd:::readDWD.meta directly on a file!
Names can later be changed to ascii with berryFunctions::convertUmlaut().

Usage

```
readDWD.meta(file, quiet = rdwdquiet(), ...)
```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/daily_kl_recent_KL_Tageswerte_Beschreibung_Stationen.
quiet	Ignored. DEFAULT: FALSE through rdwdquiet()
...	Further arguments passed to read.fwf()

Value

data.frame

Author(s)

Berry Boessenkool, <berry-b@gmx.de>

See Also

readDWD()

Examples

```
## Not run:  # Excluded from CRAN checks, but run in localtests

## End(Not run)
```

---

readDWD.multia   *read multi_annual dwd data*

Description

read multi_annual dwd data. Intended to be called via readDWD().
All other observational data at dwdbase can be read with readDWD.data(), except for the multi_annual
and subdaily/standard_format data.

Usage

```
readDWD.multia(
  file,
  fileEncoding = "latin1",
  comment.char = "\032",
  quiet = rdwdquiet(),
  ...
)
```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/multi_annual_mean_81-10_Temperatur_1981-2010_aktStandort.txt or DWDdata/multi_annual_mean_81-10_Temperatur_1981-2010_Stationsliste_aktStandort.txt
fileEncoding	read.table() file encoding. DEFAULT: "latin1"
comment.char	read.table() comment character. DEFAULT: "\032" (needed 2019-04 to ignore the binary control character at the end of multi_annual files)
quiet	Ignored. DEFAULT: FALSE through rdwdquiet()
...	Further arguments passed to read.table()

Value

data.frame

readDWD.nc   *read dwd netcdf data*

Description

Read netcdf data. Intended to be called via [readDWD()](#).
Note that R.utils and ncdf4 must be installed to unzip and read the .nc.gz files.

Usage

```
readDWD.nc(
  file,
  gargs = NULL,
  var = "",
  toraster = TRUE,
  quiet = rdwdquiet(),
  ...
)
```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/grids_germany/daily/Project_TRY/humidity/RH_199509_
gargs	Named list of arguments passed to [R.utils::gunzip()](#), see [readDWD.raster()](#). DEFAULT: NULL

var	if toraster=FALSE: Charstring with name of variable to be read with ncdf4::ncvar_get(). If not available, an interactive selection is presented. DEFAULT: "" (last variable)
toraster	Read file with terra::rast()? All further arguments will be ignored. Specify e.g. var through ... as varname. DEFAULT: TRUE
quiet	Logical: Suppress time conversion failure warning? DEFAULT: FALSE through rdwdquiet()
...	Further arguments passed to terra::rast() or ncdf4::nc_open()

Value

terra::rast() object. Alternatively, if toraster=FALSE, a list with time, lat, lon, var, varname, file and cdf. **cdf** is the output of ncdf4::nc_open().

readDWD.pdf   *open pdf data*

Description

open pdf file. This leads to less failures in the new `meta=TRUE`

Usage

```
readDWD.pdf(file, quiet = rdwdquiet(), ...)
```

Arguments

file	Name of file on harddrive, like e.g. monthly_kl_historical_DESCRIPTION_obsgermany_climate_monthl
quiet	Ignored. DEFAULT: FALSE through [rdwdquiet()](#)
...	Further arguments passed to [berryFunctions::openFile()](#) and from there to [system2()](#)

Value

[berryFunctions::openFile()](#) output

system in [selectDWD()](#).

Intended to be called via [readDWD()](#).

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, May 2022.

readDWD(file)

## End(Not run)
```

readDWD.radar *read dwd gridded radolan radar data*

Description

read gridded radolan radar data. Intended to be called via readDWD().

Usage

```
readDWD.radar(
  file,
  gargs = NULL,
  toraster = TRUE,
  dividebyten = TRUE,
  quiet = rdwdquiet(),
  ...
)
```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/hourly/radolan/recent/bin/ raa01-rw_10000-1802020250-dwd—bin.gz
gargs	Named list of arguments passed to R.utils::gunzip(), see readDWD.raster(). DEFAULT: NULL
toraster	Logical: convert output (list of matrixes + meta informations) to a list with data (terra::rast) + meta (list from the first subfile, but with vector of dates)? DEFAULT: TRUE
dividebyten	Logical: Divide the numerical values by 10? See readDWD. toraster??? DEFAULT: TRUE
quiet	Ignored. DEFAULT: FALSE through rdwdquiet()
...	Further arguments passed to dwdradar::readRadarFile(), i.e. na and clutter

Value

Invisible list with dat (matrix or raster, depending on toraster) and meta (list with elements from header)

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Aug 2019. Significant input for the underlying dwdradar::readRadarFile() came from Henning Rust & Christoph Ritschel at FU Berlin.

## Not run:  # Excluded from CRAN checks, but run in localtests
# recent radar files
rrf <- indexFTP("hourly/radolan/recent/bin", base=gridbase, dir=tempdir())
lrf <- dataDWD(rrf[773], base=gridbase, joinbf=TRUE, dir=tempdir(), read=FALSE)
r <- readDWD(lrf)
plotRadar(r$dat, main=paste("mm in 24 hours preceding", r$meta$date))

## End(Not run)
```

---

readDWD.raster   *read dwd gridded raster data*

Description

Read gridded raster data. Intended to be called via readDWD().
Note that R.utils must be installed to unzip the .asc.gz files.

Usage

```
readDWD.raster(file, gargs = NULL, dividebyten, quiet = rdwdquiet(), ...)
```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/grids_germany/seasonal/air_temperature_mean/ 16_DJF_grids_germany_seasonal_air_temp_mean_188216.asc.gz
gargs	Named list of arguments passed to R.utils::gunzip(). The internal defaults are: remove=FALSE (recommended to keep this so file does not get deleted) and skip=TRUE (which reads previously unzipped files as is). If file has changed, use gargs=list(temporary=TRUE). The gunzip default destname means that the unzipped file is stored at the same path as file. DEFAULT gargs: NULL
dividebyten	Logical: Divide the numerical values by 10? See readDWD. DEFAULT: TRUE
quiet	Ignored. DEFAULT: FALSE through rdwdquiet()
...	Further arguments passed to terra::rast()

Value

terra::rast object

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Dec 2018

testthat::expect_equal(c(terra::minmax(rf10*1)), c(-82,44))

## End(Not run)
```

---

readDWD.rklim   *read dwd gridded radklim binary data*

Description

read gridded radklim binary data. Intended to be called via [readDWD()](#).
Note: needs dwdradar >= 0.2.6 (2021-08-08)

Usage

```
readDWD.rklim(
  file,
  exdir = NULL,
  unpacked = NULL,
  selection = NULL,
  toraster = TRUE,
  quiet = rdwdquiet(),
  progbar = !quiet,
  ...
)
```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/5_minutes_radolan_reproc_2017_002_bin_2020_YW2017
exdir	Directory to unzip into. If existing, only the needed files will be unpacked with untar(). Note that exdir size will be around 17 GB for 5-minute files. If unpacked=FALSE, exdir can contain other files that will be ignored for the actual reading. DEFAULT: basename(file) at tempdir
unpacked	Manually indicate whether .tar.gz files within .tar file have already been unpacked before. DEFAULT: NULL: checks if 'yw.*–bin' file(s) are present
selection	Optionally read only a subset of the ~ 12 x 24 x 30/31 = 8640 files. Called as f[selection]. DEFAULT: NULL (ignored)
toraster	Logical: convert to terra::rast? see readDWD.binary DEFAULT: TRUE
quiet	Suppress progress messages? DEFAULT: FALSE through rdwdquiet()
progbar	Show progress bars? DEFAULT: !quiet, i.e. TRUE
...	Further arguments passed to dwdradar::readRadarFile(), i.e. na and clutter

Value

list depending on argument toraster, see there for details

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Aug 2021.

readDWD.stand   *read subdaily/standard_format dwd data*

Description

read subdaily/standard_format dwd data. Intended to be called via [readDWD()](readDWD).
All other observational data at dwdbase can be read with [readDWD.data()](readDWD.data), except for the multi_annual and subdaily/standard_format data.

Usage

```
readDWD.stand(
  file,
  fast = TRUE,
  fileEncoding = "latin1",
  formIndex = formatIndex,
  quiet = rdwdquiet(),
  ...
)
```

Arguments

file	Name of file on harddrive, like e.g. DWDdata/subdaily_standard_format_kl_10381_00_akt.txt or DWDdata/subdaily_standard_format_kl_10381_bis_1999.txt.gz
fast	Logical: use [readr::read_fwf()](#) instead of [read.fwf()](#)? Takes 0.1 instead of 20 seconds but requires package to be installed. if fast=TRUE, fileEncoding is ignored. DEFAULT: TRUE
fileEncoding	[read.table()](#) file encoding. DEFAULT: "latin1" (potentially needed on Linux, optional but not hurting on windows)
formIndex	Single object: Index used to select column widts and NA values. To use a current / custom index, see the source code of [updateIndexes()](#) at https://github.com/brry/rdwd/blob/master/R/updateIndexes.R. DEFAULT: [formatIndex](#)
quiet	Ignored. DEFAULT: FALSE through [rdwdquiet()](#)
...	Further arguments passed to [read.fwf()](#) or [readr::read_fwf()](#)

Value

data.frame with column names as per [formatIndex](#). "Q"-columns have "_parameter" appended to their name. A "Date" column has been added. NA-indicators have been processed into NAs.

```
## Not run:  # Excluded from CRAN checks, but run in localtests

link <- selectDWD(res="subdaily", var="standard_format", per="r")
link <- link[grepl("10381", link, fixed=TRUE)]
# Not ID, according to meta data, hence no longer in column id (2023-04).
file <- dataDWD(link, dir=locdir(), read=FALSE)
sf <- readDWD(file)
```

```
sf2 <- readDWD(file, fast=FALSE) # 20 secs!
stopifnot(all.equal(sf, sf2))

plot(sf$Date, sf$SHK, type="l")

# Plot all columns:
if(FALSE){ # not run in any automated testing
tmp <- tempfile(fileext=".pdf")
char2fact <- function(x)
 {
 if(all(is.na(x))) return(rep(-9, len=length(x)))
 if(!is.numeric(x)) as.factor(x) else x
 }
pdf(tmp, width=9)
par(mfrow=c(2,1),mar=c(2,3,2,0.1), mgp=c(3,0.7,0), las=1)
for(i in 3:ncol(sf)-1) plot(sf$Date, char2fact(sf[,i]), type="l", main=colnames(sf)[i], ylab="")
dev.off()
berryFunctions::openFile(tmp)
}

## End(Not run)
```

---

readMeta *Process data from the DWD CDC FTP Server*

Description

Read climate meta info textfiles in zip folders downloaded with [dataDWD()](#).

Usage

```
readMeta(file, progbar = TRUE, ...)
```

Arguments

file	Char (vector): name(s) of the zip file(s) downloaded with [dataDWD()](#), e.g. "~/DWD-data/tageswerte_KL_02575_akt.zip"
progbar	Logical: present a progress bar with estimated remaining time? If missing and length(file)==1, progbar is internally set to FALSE. DEFAULT: TRUE
...	Further arguments passed to [read.table()](#)

Value

Invisible named list of data.frames; or a list of lists, if length(file)>1.

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, 2016 + March 2019

```

---

readVars   *Process data from the DWD CDC FTP Server*

Description

Read climate variables (column meta data) from zip folders downloaded with dataDWD(). The
metadata file "Metadaten_Parameter.*txt" in the zip folder file is read, processed and returned
as a data.frame.
file can be a vector with several filenames.

Usage

```
readVars(file, params = dwdparams, quiet = rdwdquiet(), progbar = TRUE)
```

Arguments

file	Char (vector): name(s) of the file(s) downloaded with dataDWD(), e.g. "~/DWD-data/tageswerte_KL_02575_akt.zip"
params	data.frame: Parameter explanations. DEFAULT: dwdparams
quiet	Suppress message about non-abbreviated parameters? DEFAULT: FALSE through rdwdquiet()
progbar	Logical: present a progress bar with estimated remaining time? If missing and length(file)==1, progbar is internally set to FALSE. DEFAULT: TRUE

Value

data.frame of the desired dataset, or a named list of data.frames if length(file) > 1.

rowDisplay *Create leaflet map popup from data.frame rows*

Description

Create display character string for leaflet map popup from data.frame rows. This function is not exported, as it is only internally useful. A generic version is available in berryFunctions::popleaf().

Usage

```
rowDisplay(x)
```

Arguments

x   data.frame with colnames

Value

Vector of character strings, one for each row in x.

---

runLocalTests *run local tests of rdwd*

Description

Run rdwd tests on local machine. Due to time-intensive data downloads, these tests are not run automatically on CRAN.

Usage

```
runLocalTests(
  dir_data = locdir(),
  dir_exmpl = berryFunctions::packagePath(file = "misc/ExampleTests"),
  start = 1,
  quiet = rdwdquiet()
)
```

Arguments

`dir_data`	Reusable data location. Preferably not under version control. DEFAULT: [locdir()](#)
`dir_exmpl`	Reusable example location. DEFAULT: local directory
`start`	Number to start tests at, helpful for partially successful runs. DEFAULT: 1
`quiet`	Suppress progress messages? DEFAULT: FALSE through [rdwdquiet()](#)

Value

Time taken to run tests in minutes

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Apr-Oct 2019

---

selectDWD   *Select data from the DWD CDC FTP Server*

Description

Select data files for downloading with [dataDWD()](#).
The available res/var/per folders with datasets are listed [online](#).
Set res="", var="", per="" to avoid the default interactive selection.
The arguments name/id and res/var/per can be vectors.

Usage

```
selectDWD(
  name = "",
  res = NA,
  var = NA,
  per = NA,
  expand = TRUE,
 id = findID(name, exactmatch = exactmatch, mindex = mindex, quiet = quiet, failempty =
    failempty),
  exactmatch = TRUE,
  mindex = metaIndex,
  failempty = TRUE,
  findex = fileIndex,
  current = FALSE,
  base = dwdbase,
  meta = FALSE,
  quiet = rdwdquiet(),
  ...
)
```

Arguments

name	Char: station name(s) passed to [findID()](#), along with exactmatch, mindex and failempty. All 3 arguments are ignored if id is given. DEFAULT: "" (all stations at res/var/per)
res	Char: temporal **res**olution at base, e.g. "hourly","daily","monthly". See section 'Description' above and [fileIndex](#). Use res="" for matching options from all resolutions. DEFAULT: NA for interactive selection
var	Char: weather **var**iable of interest, e.g. "air_temperature", "cloudiness", "precipitation", "sol See section 'Description' above and [fileIndex](#). DEFAULT: NA for interactive selection
per	Char: desired time **per**iod, e.g. "recent" (up to date records from the last 1.5 years) or "historical" (long time series). Can be abbreviated. To get both datasets, use per="hr". DEFAULT: NA for interactive selection
expand	Logical: get all possible res/var/per combinations? Set to FALSE if you want only the given combinations. If FALSE, they cannot be NA or "". DEFAULT: TRUE
id	Char/Number: station ID with or without leading zeros, e.g. "00614" or 614. Is internally converted to an integer. Use NA (the default from findID) to get all data at res/var/per. DEFAULT: [findID](#)(name, exaxtmatch, mindex, failempty)
exactmatch	Logical passed to [findID()](#): match name with [==](#))? Else with [grepl()](#). DEFAULT: TRUE
mindex	Single object: Index with metadata passed to [findID()](#). DEFAULT: [metaIndex](#)
failempty	Fail if no matching station is found in [findID()](#)? Avoid downloading all files. DEFAULT: TRUE
findex	Single object: Index used to select filename, as returned by [createIndex()](#).To use a current / custom index, see current and https://bookdown.org/brry/rdwd/fileindex.html. DEFAULT: [fileIndex](#)
current	Single logical when res/var/per is given: instead of findex, use a list of the currently available files at base/res/var/per? This will call [indexFTP()](#), thus requires availability of the RCurl package. See https://bookdown.org/brry/rdwd/fileindex.html. DEFAULT: FALSE
base	Single char: main directory of DWD ftp server. Must be the same base used to create findex. DEFAULT: [dwdbase](#)
meta	Logical: select Beschreibung file from ismeta entries in findex? See [metaIndex](#) for a compilation of all Beschreibung files. See the 'Examples' section for handling pdf and txt files. DEFAULT: FALSE
quiet	Suppress id length warnings? DEFAULT: FALSE through [rdwdquiet()](#)
...	Further arguments passed to [indexFTP()](#) if current=TRUE, except folder and base.

Value

Character string with file path and name(s) in the format "base/res/var/per/filename.zip"

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Oct 2016, rewritten May 2022

# Give weather station name (must exist in metaIndex):
selectDWD("Potsdam", res="daily", var="kl", per="historical")

# all files for all stations matching "Koeln":
tail(selectDWD("Koeln", res="", var="", per="", exactmatch=FALSE)) # 686 files
findID("Koeln", FALSE)

## Not run:  # Excluded from CRAN checks to save time

# selectDWD("Potsdam") # interactive selection of res/var/per

# directly give station ID:
selectDWD(id="00386", res="daily", var="kl", per="historical")
selectDWD(id=537, "", "", "", "") # 8 files

# period can be abbreviated:
selectDWD(id="5419", res="daily", var="kl", per="h")

# selectDWD is vectorizable!
# since version 1.5.28 (2022-05-12) outer product, not elementwise comparison:
selectDWD("Freiburg", res="daily", var="kl", per="rh")
selectDWD("Freiburg", res=c("daily","monthly"), var="kl", per="r")
selectDWD("Freiburg", res=c("daily","monthly"), var="kl", per="hr")
# get old behaviour (needed e.g. in nearbyStations):
ids <- c(3761,3761, 3603)
# all combinations:
selectDWD(id=ids, res="daily", var="kl", per=c("h","r","r")) # 4
# only given combinations:
selectDWD(id=ids, res="daily", var="kl", per=c("h","r","r"), expand=FALSE) # 3

# all files in all paths matching id:
head( selectDWD(id=c(1050, 386), res="",var="",per="") ) # 277 files
# all files in a given path (if ID is empty):
head(  selectDWD(id="", res="daily", var="kl", per="recent")   ) # 585 files

selectDWD(id=386, res="monthly", var="kl", per="h")

# Meta  data - Description and Beschreibung txt/pdf files.:
# manually select .txt (not pdf) files for automated opening with readDWD.
link <- selectDWD(res="monthly", var="kl", per="h", meta=TRUE) # omit ID/Name!
link
link2 <- grep("\\.txt$", link, value=TRUE)   ;   link2
m <- dataDWD(link2, dir=locdir())
```

```
head(m)
#
# Open PDF files with your system's default Viewer:
dataDWD(link[1], dir=locdir())

## End(Not run)
```

---

updateRdwd   *Update rdwd development version*

Description

Update rdwd to the latest development version on github, if necessary. If the version number or date is larger on github, `remotes::install_github()` will be called.

Usage

```
updateRdwd(
  pack = "rdwd",
  user = "brry",
  vignette = NA,
  quiet = rdwdquiet(),
  ...
)
```

Arguments

pack	Name of (already installed) package. DEFAULT: "rdwd"
user	Github username. repo will then be user/pack. DEFAULT: "brry"
vignette	build_vignettes in `remotes::install_github()`? DEFAULT: NA (changed to TRUE if rmarkdown and knitr are available)
quiet	Suppress version messages and `remotes::install` output? DEFAULT: FALSE through `rdwdquiet()`
...	Further arguments passed to `remotes::install_github()`

Value

data.frame with version information

Author(s)

Berry Boessenkool, <berry-b@gmx.de>, Nov 2019

See Also

`remotes::install_github()`

Examples

```
# updateRdwd()
```

---

validFileTypes	*valid fileType values*

Description

fileType values that have a reading subfunction readDWD.ftype().

Usage

```
validFileTypes
```

Format

An object of class character of length 13.

Index
